I had this Adventure game many moons ago and I just can't remember the name of it. It was an Adventure game with graphics. You started on Earth and had to find your way to the rocketship, blast off, go to the moon or one of the planets and explore. I believe the game took up both sides of a disk. Does anyone know what the name of this may have been? Thanks...

3098. 1K 6502 programming contest !

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-25 00:00:00 UTC
From: Fabrice Frances <frances@ensica.NOSPAM.fr>
Message-ID: <7dcrhkblh1@news.cict.fr>
Source record: 53664

Hello 6502 lovers, I'm pleased to pre-announce a
6502 programming contest in the spirit of the 80's.

Do you remember when programs were optimized
to fit in available memory ? Here is your chance to
feel again the atmosphere of this golden age:

THE 1KB MICROTAN PROGRAMMING CONTEST

Huh ? What's this Microtan thingy ?
Imagine a small 6502 system with 1KB ram and 1KB rom,
with discrete logics driving a video output, very few I/O ports,
and you are done. Tangerine's Microtan65 can be seen as
the 6502 version of Sinclair's ZX80...

So, with 1KB of ram (half of it being used as video memory),
will you dare writing THE incredible program ?

The programming contest rules can be read on the
Microtan65 page of http://oric.ifrance.com
along with a cycle-based emulator.

6502 programmers of all platforms (Atari, Acorn, Commodore,
Apple, Oric, etc) : please enter the hall of fame of 6502
programming and sign in this competition which will allow
all 6502 programmers to meet !!

Also, if you are not a programmer but still interested in
the programs your friends will write, you can postulate
for the international jury that will evaluate the programs !

Best regards to all,

Fabrice

PS: It seems I haven't managed to cross-post this message,
and I have duplicated it in several newsgroup
(comp.sys.acorn.announce, comp.sys.apple2, comp.sys.atari.8bit,
comp.sys.cbm, comp.sys.oric).
If someone knows how to fix this, TIA...

Well, since you made it Csa2, why bother with the others?

The problem may be that you included a moderated newsgroup in your list of posting targets. This sometimes means that none of your targets will get the posting until it is accepted by the moderated group. (I had a similar problem last year when trying to post to a .answers moderated newsgroup. David Empson emailed an explanation.)

You'll find all you need on this site:

http://www.ksk.sala.se/~rob/alternate-reality/

Just make sure you use a blank image for a character disk instead of the ones
they give you and it'll run.

Hi Leute

Hab folgendes Anliegen:

Hab mir ein 08 / 15 - Keyboard mit Midi - Schnittstelle (in / out)
ausgeborgt und m�chte es an meinem PC (233 MMX, Win95, 64MB Ram, AWE64Gold)
betreiben. Nun habe ich folgendes Problem: Ich schaffe es nicht, am PC �ber
die Soundkarte irgendeinen Ton des Keyboards zu h�ren, geschweige denn
einzuspielen. Ich m�chte Midi - Daten ins "Cubasis AV" u.�. einspielen und
dort weiterbearbeiten. Nur habe ich dabei anscheinend irgendein Treiber- und
Installationsproblem, bei dem ich anstehe. Die Verkabelung pa�t 100%ig, nur
ich kann der Soundkarte keinen Ton entlocken. Nun meine Frage: Was mu� im
Punkt "Multimedia" in der Systemsteuerung alles installiert sein, da� ich
die Midi-Daten, die ich in den PC schicke, in Musik umsetze? Was mir
aufgefallen ist: Beim Mischpult (Play Control) ist der Punkt "Ton aus" bei
Midi deaktiviert. Vielleicht weis irgendwer eine L�sung f�r blutige Anf�nger
wie mich, denn ich hab (bis jetzt noch) absolut keinen Tau, wie ich das
machen kann. Weis wer Rat? Wenn geht, bitte Antwort an meine e-mail-adresse
klaxmax123@yahoo.com

Herzlichen Dank f�r die M�he,
Sascha

Here's a question about that game:

Did that spaceship that you flew around in look like a letter "H"? I know the game you're talking about if that's the one. You flew around to various planets and had to complete missions and get items. One of the planets you had to get a diamond, one you had to get a candleabra, and there were others that I forget. AND, if you flew into a planet too fast or landed too fast, your ship crashed and a psychedelic explosion ensued. Plus, they used "Anchors Aweigh" for the flying music. Does any of this sound familiar? If you find this game, please send me an e-mail! I've been looking for it ever since I got AtariWin! Thanks.

you can almost make it work.... worst problem is the seek time constant. A 3.5 uses a much lower value than the 5.25.

why bother? the bulk of the work is just the mechanical attachment of the 3.5 mechanism! Changing the ROM is a drop-in. seems silly to not do it.

well, actually, the PAL in your Atari is a one-shot deal. You can't change it. You just use a blank PAL or a GAL and burn new logic in it on a programmer. It is really pretty simple and only takes a minute. For the memory upgrade, I deleted the BASIC cartridge selection and used its I/O pins to select the ramdisk (and de-select memory) when we are addressing $4000-$7FFF and PB4 is low. Since the SRAM chips do not multiplex their address lines, you don't need the additional 158s or refresh that the DRAM upgrades have to have.

The most difficult part of reprogramming the PAL is reading the Atari part and decoding its functions. After you get that done, you can pretty much do anything you want - move the cartridge space to $4000, put the OS at $1000, enable the PBI ROMs,,,, anything.

Source record: 53680

I own one of those small "card-sized" Atari calculators. Its battery is dead, and I can't remove the single, tiny screw that keeps the battery cover in place at the back of the calculator. The "inside" of the small Phillips screw is TOTALLY rounded out, and -- since the screw is so tiny -- it is seemingly impossible to remove. I don't want to damage the plastic battery cover at all...so does anyone have any "tricks" up their sleeve that would give me a shot at removing this tiny, stripped screw? If there were some way I could "crack" the screw, maybe it would come out. I'm sure there's some "professional" trick that would remove it without damaging its surrounding plastic cover, but I am clueless as to what it might be. Any ideas? (As a last resort, I am considering going to a jeweler, but I hate to shell out any money if there's a "home" method of removal).

(removing phillips screw with rounded socket area)
Get a Dremel and cut a slot in the screw, so you can remove
it with a small flat-type screwdriver. Use either a tiny
dentist-type bit or a thin cut-off wheel to make the slot.

Atari Enthusiasts!

This is a quick announcement about the recent reopening of the Atari
Central message forums. It's taken some time to work out the kinks with
interNic, but the boards are back, and many of the old messages are
still there and
are now searchable. There's a new Lynx message forum as well. If you
liked the old site, we feel you're going to like the new one even more.
Hope you stop by. http://www.ataricentral.com

3123. Announce: PC-Gateway released

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-26 00:00:00 UTC
From: Tom Hunt <tom_hunt361@my-dejanews.com>
Message-ID: <7dh3ab$l2l$1@nnrp1.dejanews.com>
Source record: 53689

PC-Gateway allows you to connect your 8-bit to the internet, through your PC. It does this by using a null modem cable between your 8-bit and PC. It also works for dumb terminals and other PC's as well. Too many people and not enough computers in your house that are connected to the net? PC-Gateway turns your system in to a multi-user system. Read all about it at-

http://cth.tzo.com/pro/pc-gateway1.html

Try making it into a 'slotted' screw by cutting a slot in it. Then
use the appropriate size flat bladed mini screw driver to remove it.

I canï¿½t write in the Newsgroup because I canï¿½t find the right Website to
link ataridsk.exe

If you have an drive which can format Double Density Disks on The atari like
the Floppy XF551 or any 1050 with happy or Speedy
AND an PC 5,25 Drive can I send You the Program "ATARIDSK.EXE" .This Program
read and write DD-Disks Formatet on Atari 8-Bit.Only for Com,Exe,bas,...
Files but for BOOT-Disks
But Binary Progs are not good for Newsgroups.Mail me and i will send you the
Program per E-Mail.

You can also use SIO2PC Interface to emulate Drive 2-4 on the PC and simply
Copy Disks (*.atr Format)
This Program (ver.4.19i)can also copy and Store " Boot Disks on PC.
Search for sio419.zip or ask :

Well, if your 800XL is socketed, you don't need to do much soldering
to make the Buchholz upgrade... Let me check for the URL (I remember
it's at The British Underground page, but I don't remember it
right now)

>The ROM contents is dumped somewhere. I believe I downloaded
>it once... haven't used it yet, though...

There are two patches to the original ROM
code. The first is listed in the Bob Woolley
article that was widely published, including
Antic. The second, as I recall, had to do
with the XF's density selection errors. It was
mentioned here about a year ago, and I
thought that I copied the post to a text file,
but unfortunately can't find it. So if someone
did copy the second patch down (it was just
a few bytes) and they could post it again...

There is another interesting aspect to this.
I used the Super Archiver to look at the
interleve provided by the XF, since it has
been mentioned in several articles/posts
that the interleve is "high speed" (but not
Ultra Speed). The examination revealed
that the interleve was identical in both single
density and double-sided, double density,
so the difference in the effective transfer
rate results from transferring twice as many
bytes with the high speed SIO code. And
since it is not yet optimal, formatting with
Ultra Skew provides about another 1/3 or
so increase in speed.

Anyone know if there's a copy of this language for download anywhere on the net?

Or does anyone have a copy they could let me have?

Thanks
JG

Almost an entire collection of Antic, Analog, Atari Explorer magazines.

Also have *almost* the entire InfoCom adventure series, still in the box.
Have just about every piece of 8bit software ever created. Name the title, I
probably have the original diskette plus manual.

White Flame (aka David Holz) a écrit dans le message
<7deli0$454$1@barad-dur.nas.com>...
>um, when's the deadline? I'm a busy guy.

The initial post was a pre-announce, meaning that I wished to have
an idea of how many active 6502 people there are nowadays.
I guess a two months delay is good enough for writing 0.5 KB of
code, so I should announce the start of the contest on the beginning
of April, with submissions due for the end of May... any comments ?

Anyway, I have no idea at all of whether 6502 programming is dead or not
in the comp.sys.apple2, comp.sys.atari.8bit, comp.sys.cbm and
comp.sys.acorn.programmer groups...
I've only had one answer from the acorn guys who find the microtan
a nice machine even simpler than the Atom, but nothing else...
So, to the people interested, please raise your fingers and tell
your intention to participate ... 8-)

Best regards to all,

I have a cartridge that has Star Raider on the label. When booted it says Star Raiders. And when I was looking on ebay, I found a cartridge with the label Star Raiders. Is mine rarer than the others? Is there a story behind mine?

Thanks
Chuck

3147. New Episode of Back In Time radio

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-29 00:00:00 UTC
From: mstulir@geocities.com
Message-ID: <7do5on$9rd$1@nnrp1.dejanews.com>
Source record: 53713
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,rec.games.video.atari

The new episode of Back In Time has been posted. This episode features an extensive interview with Curt Vendel, curator of the Atari Historical society. Curt and I discuss all aspects of Atari history. This is the longest show to date. (Just over 40 minutes.)

To stream the show through the Internet, click on the GT2K option on the Back In Time web site.

Due to multiple requests, I have also set up an archive of all of the shows, including the new episode. These may be downloaded for offline listening. To access these shows, click on the "Radio Show Archive" option at the Back In Time web site.

All aspects of audio quality have been improved on this new show. The Real Audio player is required to hear the shows.

The next episode will feature Dana Henry, Public Relations Director for Hasbro Interactive. That episode should be posted sometime around Sunday April 11th. We will discuss Hasbro's plans for the Atari properties, the BattleSphere situation, and their recent classic game updates such as Frogger and Centipede.

The Back In Time mailing list has been set up. Be sure to sign up, and have the latest classic gaming/computing news and information sent directly to you via E- Mail.

The Back In Time website has been through some changes in the last few days to fix some font and color issues with Netscape Navigator. If you are using Navigator, the site should look better now.

Just to let you all know that I have just aquired a scanner, and I'm in the process of scanning old photos from the UK AMS shows from 1990 and 1992. I already have some up on the site, with more to come. I am also going to scan some UK magazine covers and 'Atari User' Show program covers, and some UK Atari catalogues, and anything else of interest. Take a look at what's there now and keep checking back for when I add more. http://www.dgs.clara.net

3156. XF551 Upgrade Problems

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-29 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <7dp0tp$7sr@freenet-news.carleton.ca>
Source record: 53722

I'm trying to install a 720k floppy mech into my XF551 according to
the directions posted recently without luck.

I upgraded the rom, no problem. The drive is happy with that, but it
refuses to use the 720k drive mech.

The drive just spits out errors for every operation.

When the drive accesses it, the mech will spin but the light will
not come on. I used to see this on PC's when the drive was
attached to the wrong port on the cable. 'after the twist'.

Is there some modification I need to make to the XF551 cable to get
it to properly select the drive? I've tried it with 3 720k drives
which all work fine when attached to a PC.

Any ideas?

Steve

No, I don't think so. All your links to "The Story so Far" go to the
French version.

I mean the links are listed in english, i.e. "The Story so Far", but
they go to French language pages.

I am a RTFM kind of guy. After the first 4-5 links were in French, I was
out of there.

PC-Gateway allows you to connect your 8-bit to the internet, through your PC. It does this by using a null modem cable between your 8-bit and PC. It also works for dumb terminals and other PC's as well. Too many people and not enough computers in your house that are connected to the net? PC-Gateway turns your system in to a multi-user system. Read all about it at-

http://cth.tzo.com/pro/pc-gateway1.html

Source record: 53593

Hi 8-bit folks!

I've got a few 800XLs stockpiled for the coming apocalypse, and I have
just about every game
I remember from my teenage days save for Jumpman. I get a Device Done
Error because one
sunny day in 1986 I overwrote my high scores onto my game disk. Oops.

If anyone knows where I can get a copy: trade or buy, please let me
know.

Thanks!

David Hedley

I have both versions as well. I posted this exact same question some time last year. I believe the answer I got was the earlier manufactured carts were "Star Raider" and then shortly after "Star Raiders". You can check Deja-News to double-check. I don't believe that it's a big rarity or anything, since a lot of these were produced.

3171. Help with 8-bit, ColecoVision and NES label variation list

Chuck

3172. English Translation of Docs for 130 XE+ Makro-Assembler

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-30 00:00:00 UTC
From: Alan Sharkis <asharkis@erols.com>
Message-ID: <7drom4mqd1@autumn.news.rcn.net>
Source record: 53598

Ron Fetzer of The Ol' Hackers AUG has just translated the docs to Torsten Karwoth's 130 XE+ Makro-Assembler into English.

This package, which includes an assembler, linker, editor, batch enhancements for MyDos and a whole lot of other stuff, can now be used by the English-speaking Atari 8-bit community. I'm told that it's the most popular assembler in Europe. It does require a 130XE or an 800XL with a minumum 64K Ramdisk to run. I'm posting it, together with a short text file, in alt.binaries.comp.atari8bit.

The Ol' Hackers and Ron Fetzer are happy to make this available.

It's a pretty neat game, you're this knight on top of a castle, and these little orcs try to storm
it. They each come out with a little ladder and try to get to the top, while you throw down things
to knock them down and destroy their ladders. When they finally get to the top, you get a little
sword (I think) out and start whacking them with it. It's no Donkey Kong, but it's pretty cool in
it's own way.

There was a game like that for Amiga... I think that is a good simple game concept. Sounds like you have a real find on your hands! I have never heard of Orc Attack for the Atari 8bit, and I have heard of almost all of them I bet.

Don't get swindled out of that cart. You could post it on eBay to find out its worth.

> I'm trying to install a 720k floppy mech into my XF551 according to
> the directions posted recently without luck.

Well I got the 3.5" drive to respond, I just needed to use the
drive 0 select jumper, which the manual warns never to use :)

This double drive mech also has a 1.2mb 5.25" drive that works ok
with the XF551 as well, but only as a 5.25" 720k drive. It wont
read 80k disks properly since the new mech has 80 tracks and the SD
mechs have 40 tracks.

With the 5.25" drive set to 300 RPM it reads track 1 OK, but no luck after
that since track 2 on the 80 track mech is between where tracks 1 and 2
are on the 80k formatted disk.

Anyone know how to set double stepping in the XF551 rom to make this
work ok?

Steve

The short end of it: Destroy all 16 satellites in each level (the
blue things shooting out lasers. Green lasers are harmless, red ones
kill you.)

The round things that appear after a few levels will try to repair
destroyed satellites. When the "Alert" message flashes with
accompaning sound, take the nearest portal (the thing consisting of
several colorful concentric circles) to find and destroy them.

Watch out for the boomerangs and exploders (you'll see.)

Inner sanctum: Find the maze icon somewheres in each level and touch
it. In there, go through the maze and get all the flashing dots as
you can, then leave by going through the red portals. When you come
out, touch the space police craft (it'll quickly come towards you) and
it'll kill as many satellites as you obtained dots. (Note: if you
died in the maze (by touching the red barriers), your dots become null
and void.)

That ought to be all you should need to play the game... have fun!

That sounds a bit harsh. The graphics were nothing to write home
about, but this was an early game, on a 16K(?) cart. The game did
have an addictive quality to it though, and was pretty unique. I
remember spending many an hour playing it (and I don't think I was the
only one). It has game play, something which a lot of today's games
are lacking. Of course, not everyone like adventure style games, but
I quite like it. The ending could have done with improving though.

For anyone interested or stuck on the game, I've got a web-page about
it at:

It is a great puzzle game. The graphics doesn't matter to much as it's the
solving part that makes it good!

And it's not the game he was asking about, he said 2 disk sides. He
confirmed he thought it was Mission Asteroid

I bought my cartridge in 1981, it says "Star Raider" on it. It was
just the earlier production run, I don't know when they started
tacking the 's' on the end. I don't think it's any rarer, I see them
all the time at this big Flea Market I go to.

I want to get rid of this stuff. ANY somewhat reasonable price gets it all. Prefer someone in the Houston / south/ east Texas. So much it would cost a fortune to ship. Partial list:
4 ea 800's , 2 or 3 w/ 256K mods
3 1050's , 1 w/ Super Archiver
2 ea 810 drive, 1 w/ Happy
2 ea 800XL
1 ea 1200XL
1 ea 400
2 SX212 modems
1 820 printer
2 RANA drives
Covox
Computer EYES
Wico joysticks
1 ea 1701 Commodore color monitor
Koala Pad
Atari track bal
a dozen power supplies
2 tape drives
many many books full of docs and info.
300-400 discs of games, edu, utils, word procs, spreadsheets, etc.
spare mother board, video boards, chips, Antics, etc.
Email me at tascathand@durab.com. I gotta get this stuff outta here. I haven't used it in over 2 yrs. Some in over 5 yrs. PC's are takin' over. I need room. Terry

3198. Wanted: 8bit cross-assembler for linux

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-31 00:00:00 UTC
From: Jan Schormann <Jan.Schormann@Informatik.Uni-Oldenburg.DE>
Message-ID: <7dsvdi$ibk@news.Informatik.Uni-Oldenburg.DE>
Source record: 53614

Hi Folks!

Only a week ago I finally managed to hook my PC to the Atari as some virtual floppies via SIO - happy me...

Now, after making some backups from the old disks and wondering what else I could do, I'm looking for an easy-to-use 6502-assembler *not* running on an 8bit-Atari, yet producing code for it. Preferrably, I'd have it running under linux (while I must say that using Bibo-Asm in the Emulator is fun...)

Have you got a pointer to such a thing?

If not, I might be inclined to make-my-own...

That would be in Emacs-Lisp, thus depending on Emacs, but featuring regex-search-replace, syntax based indentation and highlighting etc.; also I would distribute it under the GPL and it would actually run in Windoze-Emacsen, too.

Anyone interested in that? (Motivation may help...)

Hoping for response,
Jan.

Try: http://www.tu-chemnitz.de/~fachat/8bit/cross/xa/index.html

It is compilable under Amiga and MS-DOS (DJGPP). I think it should
compile anywhere under GCC.

Bye,
Jindroush (http://www.asw.cz/~kubecj)

3210. Magnavox RGB80 vs 1902 monitor

Newsgroup: comp.sys.atari.8bit
Date: 1999-03-31 00:00:00 UTC
From: nospam@nospam.net
Message-ID: <3702b15b.8628833@news.supernews.com>
Source record: 53626

A note for Steve Tucker. Regarding your opinion a few weeks back that the RGB80 is the best monitor because of the green mode etc., I have to agree. A note is that this monitor (magnavox rgb 80) is identical to the commodore 1902. The board inside is the same and the picture tube is the same. The 1902 also has Switch for COMB defeat and a second input (lin RGB) Both of these can be added to the rgb80 by soldering in the switch, connector, and a few resistors which there are openings for on the board.

I think this will prove nothing. I'd suspect C64 owners vote C64, Speccy
votes Speccy, CPC votes CPC, Vic 20 votes Vic 20, etc... The only thing
it will prove, due to loyalty, will be what percentage of people owned
that type of computer system. If you put this up for debate on the
'best' computer (including PC, Mac, Amiga, etc...) then you'd probably
find the PC is the 'best' coz more people own it, when we know the Mac
and Amiga have distinct technical advantages. The PC got lucky and had a
tonne of money put behind it's software and hardware development, so
it's only natural more people with have widely available PC's. The C64
will win this vote because it was the cheapest system - that's not to
say that it's a bad machine, on the contrary - it's alright. Who
knows... if the CPC had a built in TV modulator, 8-bit history could be
considerably different.

Sorry about knocking the wind out of your sails.

I have an Atari 400 System and Software for Auction on eBay. Bidding starts
at $9.00. Below is a description of the items for sale. You can view the
auction at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=85521809

Here's a copy of the item list:

Hardware:
Atari 400 - 16 K RAM (appears to work fine... I've plugged in a few
carts and come up fine)
(it's missing one of screws in the case).
Atari 410 - Datasette Recorder (works fine recording and reading new
programs,
but has problems reading some old tapes)
Atari 400/800 power supply (fuse has been bypassed, required taping case,
works great)
Manual Switch box (spade plug replaced with wire... works fine)
XM301 Modem (300 baud, direct connect modem... guess this one's more for
nostalgia)
(I have not personally tested the modem, it's condition is
unknown)

Cartridges:
BASIC
Joust
Star Raiders

Tapes: (the programs appear to be intact, but I they have problems with the
410
included... I think it has to do with the age of the 410 and
not the tapes themselves)
Frogger
Quantitative Comparisons
Darts (Thorn EMI)
Thorn EMI Computer 4
Hockey (Gamma Software)
Sound Editor
European Scene Jogsaw Puzzles Vol. 1
Blackjack (Atari)
SCRAM (Atari) (nuclear power plant simulation)
Sargon II
Drawpix (Artworx)
Nukewar

I agree and everyone should realize how dangerous it can be to be caught up in this nostalgic fever. I usually buy from people who are just looking to sell their old systems and not a dealer. Ok, the dealers are great sources for stuff you will not find in town, but, I have seen some unscrupulous deals occur on Ebay. What I mean by unscrupulous is over-valuing Atari systems, creating demand where there was none, etc.

We should all be on guard against this.

Peace,
Sixosix

Hi,
Yes, Boulderdash is available on the 'Net! in ATR format.
You can find it here:
http://www.dbyte.com/wysk/b.htm

Peace,
Sixosix

Hello friendly non-suspicious people! I am an 8 year old boy (my name is Bobby) and I like the Atari stuff. If you have any extra Atari stuff that you don't want (preferably any thing rated ER or better) please send it to me. I would send money for shipping, but I would have to break my piggy bank.

Bobby

ps. also I am an orphan.

Lifes a pisser isn't it!!

At least you will only want 1 joystick tho :)

Alternatively I am a 37yr old greedy git who wants all your working
Atari bits, I won't send you money for shipping nor will I even thank
you for it..

Any offers???

Source record: 53549

Vinnie,

Darn! I just mailed off that 1702 with Bounty Bob cart, the Black Box, Wico sticks, etc. to a homeless quadraplegic orphan Eskimo boy stranded in remote Northern Angola. It seems that after he went snow-blind, he was kidnapped and taken there by nomadic pirates who had used him as a slave laborer as they made their perilous journey back to Northern Angola. After living on nothing but rat-meat during the length of their trip, the blind orphan-boy was left to die, but somehow managed to construct a make-shift sand-hut and stealthily rig his secreted 1000-foot extension cord to the nearest power outlet at the Angolan Kool-Aid stand/Cyber-cafe (a newly-acquired Bill Gates' enterprise). Thirsting for Atari pleasure, the poor quadraplegic orphan-boy learned to use his tongue and mouth to manipulate both keyboard and cartridges which he found while stumbling through the refuse heap of the thriving desert Kool-Aid stand. Yet, somehow, someday, somewhere...he longed for an Atari system of his own (complete with 1702 monitor)...
So, you see, who was I to deprive him of the meager Atari hardware offerings which I had packaged up, ready to donate??? I only hope they bring him the profound pleasure that we, more privileged Atarians hold so dear to our hearts!! :)

3227. Q: 2600 Sports! Baseball, Football, Soccer, Karate/KungFu, etc???

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-01 00:00:00 UTC
From: Bowling <mbowlin1@tampabay.rr.com>
Message-ID: <kAKM2.144$Y35.49883@newse2.tampabay.rr.com>
Source record: 53551

Since I don't have ALL the Atari "2600" sports titles, can some collector (who either owns all of them, or has knowledge of all of them) please list exactly how many DIFFERENT versions of Baseball, Football, Soccer, and Karate/Kung Fu that exist for this system, and which TITLES were merely duplicate titles by other manufacturers (in other words, WHICH Atari sports titles have been DUPLICATED by more than one manufacturer, under a different -- or even identical -- title?)
It would make an excellent topic for a FAQ -- I'm sure many people are confused by the multiple and varied titles, involving the same sport. In addition, how many of these were "bumped-up" to be ported to the Atari 400/800? (for example, I know Realsports Football was).

From: Bowling <mbowlin1@tampabay.rr.com>
Message-ID: <_vNM2.167$Y35.53183@newse2.tampabay.rr.com>
Source record: 53560

I intend to (eventually) collect "most" all of the US-released Atari 2600 carts. I choose to exclude both "porno" titles, and "children's" titles (educational, or not) from my "must-have" list.
While some titles are obviously for "children-only" (such as "Big Bird" or "Ernie" titles), there are several titles that are equally "child-only", but without an OBVIOUS "child-only" title (for example, was "Sorcerer's Apprentice" aimed at the "child-only" audience?).
Does anyone possess -- or, can someone please create -- a list of titles that were obviously intended to be directed at the "small child-only" audience?

The Speccy was *far* cheaper than the C64, ergo by your reasoning it
should win.

By rights I should vote for the Speccy, as it was my childhood machine.
And indeed for UK gaming, during my most formative years, I think nothing
can touch it. Jet Set Willy, Skool Daze, the Magic Knight series, Monty
Mole, etc - a list of classics utterly unrivalled by other machines.

However, as a piece of hardware, the Spectrum is barely more than a Z80A
with a single I/O port used. Cheap and effective, but nothing amazing
(okay, the dual bus architecture is pretty clever, but I digress) -
certainly not a patch on the ingenuity of the ZX81. The C64, on the other
hand, was an incredible machine with potential that took years to be
realised, and many of its coolest features seem to have been designed in
by accident. I'm not saying it's an optimal piece of hardware like the
Spectrum; certainly not! (especially with the earlier ones, crammed full
of TTL logic) But as a way of bringing a *lot* of extremely hackable
hardware into very many homes, it is unrivalled.

The Atari 8 bit range has some cool features, like the display lists and
that fast (for 1978) 6502, but I think its failure to achieve substantial
market penetration, especially over here, precludes it from winning. That,
and the frustrating lack of colours in its video modes.

Machines like the Amstrads and Acorns just don't get off the starting
block as far as I'm concerned. Their hardware is unspectacular, consisting
mainly of standard parts, and they don't have sufficient 'classics' to win
on software alone. The Speccy *was* the UK software scene, for most of the
important years, and the C64 a close second, waiting for the demise of the

Speccy before it showed its true potential.

T'was my two cents...

Richard

The ITEMS I Sell do cost me money
The Items I Donate are Donated to me
how hard is that to explain?
the items I sell are NEW in Boxes with warranties either by the company or
me.....
Also even though I've received NO Donations this year I still have given
away 8 systems.....
as to the high prices if someone wants something from me the listed prices
are negotiable ..... it's supply and demand
I goto swap meets and garage sales all over the south looking for items
if i find a good deal i buy it if not i don't
Thanks
Edward Williams

If there is to be a 2600 sports games FAQ, it is ye who will be writing it Bucko! I don't think there were too many renamed and repackaged games, once you get past the Sears TeleSystem group. Most sports games had an original crude Atari version, then more advanced versions. The later efforts are generally the best.

Pete Rose Baseball: I have seen screen shots that make me think this really was incredible for the 2600. I have RealSports Boxing which is graphically good, interesting, and on the rare side. Another odd-ball latecomer was RealSports Volleyball which is excellent with great graphics, but the play value is not complete.

Doesn't the 1902 have a separate chroma input? Is this what you were
talking about?

Any chance you'd have a second to post what the mods would be, for those
of use without a 1902?

Cheers,

Aaron

I've got the same monitor, and it had the same problem...

Mine also had the price ($4.95) written on it with a Sharpie. I used this stuff called Citri-Solv (just plain old Citric-acid based solvent cleaner) on the inside and outside of the disassembled case and it took everything off. I made sure I blew the internal components off with compressed air and then I turned it on in my garage and just let it sit for a few days. When I reassembled it and brought it inside, I could barely detect the smell of smoke at all...

Good luck!

Aaron

I'm an orphan/invalid/child - can I have some free computers?

Translation: I am a to f*cking lazy to work for a living so I will try to con generous people out their collections and then sell them back on eBay for a ridiculously inflated amount.

Tell you what, a-hole, lets save everyone time and trouble. Just post your address and we'll each send you a check for $50.

Get a clue - what twelve year old refers to himself as "only 12 years old?" When I was twelve, it was, "I'm 12 years old, dammit, and I can rip you in half..."

This kind of garbage makes me sick.

Of course, if you are 12...you still make me sick, you little mooch! Mow some damn lawns, like the rest of us did at your age...when we were buying these things *new*.

Yes, and I would not even have thought of
it. But since it was never actually sold as
more than a few hundred prototypes, I'm
not sure it would count. But definitely a
cool machine. The Apple GS was likewise
a seriously updated 8-bit, although crippled
by Apple for whatever variety of marketing
reasons. Add a ZIP CHIP, though, and it
rocks!

Source record: 53575

I have now scanned the covers of all 5 Atari UK's I/O magazine from the early 80's. These are regarded as very rare, especially issue 1 which is missing from many people's collections. Being produced by Atari UK for UK readers only, it is unlikely US users have seen these before. Check them out at: http://www.dgs.clara.net

I will be scanning the early issues of Page 6 magazine soon. This will include the very rare issue 1. This really is rare, only 750 were ever produced and the vast majority of those went to members of the Birmingham User Group. In 10 years of buying/selling Atari gear I have only ever seen 2 copies of Issue 1. I'll let you know when they're available.

Depending on what you want to do with the disassembly, and what
assembler knowledge you have, you could try:

http://www.geocities.com/SiliconValley/Lakes/7953/8bit/asi.html

It will produce output in AMAC/Mac65 format, which you can they play
around with to your heart's content.

Erm, all of us Acorn users went 32-bit a VERY long time ago. Like, in
1987... People only ever emulate our old BBC machines to play classic games
like Elite.

3265. Atari Calculator LCD Problem

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-02 00:00:00 UTC
From: Bowling <mbowlin1@tampabay.rr.com>
Message-ID: <bsaN2.12$ZK1.3694@newse2.tampabay.rr.com>
Source record: 53581

A while back, I was assisted to remove a stripped screw from my Atari calculator. Now, there is a possibly more dire (in a way) problem on the horizon. The calculator (it's a DataBank, actually, complete with clock and telephone functions) has a vertical row of "LCD"s that won't show themselves.
For example, if the number "8" (which is made up of seven short "LCD" line segments) were displayed at this particular location on my calculator, it would show up looking like a "backwards" "3" (missing two of its LCD pixel line segments).
While the calculator is still readable/usable, this flaw certainly hampers my enjoyment of this otherwise wonderful little item of Atari memorabilia.
Any ideas on how to fix it? Or is this sort of thing irrepairable?

I have one of those Atari data bank things too. On mine, the data
started to fade. This is hard to believe, but yes, characters started
to change all by themselves. This is painful if the data contains
telephone numbers. The numbers simply change all by themselves.
Since these calculators were not made by Atari, but just by some
company that put their name on it, you cannot expect it to be the same
quality. (well, Atari did try to cut on cost every penny they could.,
but at least most of their stuff did work).
Anyway, I can't help you with this specific problem, but to me these
items are just collectibles, and I would not trust them with important
data. I doubt LCD stuff can be repaired. Maybe you are in luck, and
it is just a lose contact, but somehow I think this is not the case.

(When did ANALOG begin selling disk/tape with mags.)
Issue #18 is the first to show a subscription card with
a disk or tape subscription (1 year $130 mag & disk,
$90 mag & tape).
The first ad I can find in ANALOG for it is in issue 22 (9/84).
This ad says 'since issue 1, ANALOGs cassette and disk subscriptions
have eliminated typing in programs from the magazine.'
Somehow, I suspect you might get disk or tape before #18 (4/84),
but uhm. I don't think so. So I'd say probably the first disk or
tape was for the #18 to #22.

>Issue #18 is the first to show a subscription card with
>a disk or tape subscription (1 year $130 mag & disk,
>$90 mag & tape).

Actually, before that. I have such a card in
#11, and a friend of mine was purchasing
the programs on cassette starting with issue 9.
The prices shown on the card for #11 were
mag + cassette $36, and mag + disk $60.
BTW #11 was Apr/May, 1983.
I believe that at least initially, ANALOG had
a second party handling disk/tape subs.

Source record: 53490
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

We've seen the occational message "Are there any other users..."

This tells me that we still long for user groups, and since I am having such a blast (and since Atari is such a cool platform) I would like to fill in the blanks here in the Americas!

In the United States, I find it ironic that all the fandom tends towards the edges of the country. You have two user groups (AUNT, HACE) in Texas, the Pacesetter in Florida, Old Hackers in New York (?) and then the next nearest thing are the clubs in Canada.

What? I didn't list your group? Well, let's fix that!

I want to blanket the United States with Atari fandom. I know the users are out there. Thousands of Atari users, many not connected to the internet.. but they're out there.

So, the thing to do is start a list. From this list we can find people who live near us, and start clubs and user groups.

In 1999? Can you think of a better time?

And from this list we can make a map and show all the locations of user groups across the United States.

TO HELP WITH THIS.. ALL WE NEED IS:

YOUR NAME
LOCATION (City, State)
E-MAIL ADDRESS
COMPUTER TYPE (optional)

As soon as I get 20 names, I will post the URL for the MEGA USER LISTING, so send your info today help get this started. Who knows, someone else might be waiting to start a group up near you!

I appreciate the response, but frankly, that's the silliest answer I have ever heard.
That answer assumes that the "market" is a PERFECT market, where all potential buyers are aware of ALL items up for sale, at ALL times, and no one ever achieves a "bargain" as to an item's true worth.
However, as we all know, sometimes the true market "worth" of an item is not realized when a rare item is merely exchanged between an ignorant (i.e., uninformed as to an item's rarity) Seller, and his Buyer. Often an item's actual market worth is only realized when the item is offered for sale to people with knowledge of its scarcity.
Your answer would suggest that if I bought a silver-label Quadrun cartridge at a Flea Market for 25 cents, then the actual worth of the Quadrun cart is only 25 cents. Need I point out how ridiculous that is?

Hi,

I like the Idea but I think you should make a list of all active users in
the world.

The people just have to subscribe to get on or off the list.

So here is my info:
YOUR NAME Sysop*TXG
LOCATION (City, State) ST. Crispynstr. 4 ,5144RD ,Waalwijk
,The Netherlands
E-MAIL ADDRESS SysopTXG@underground.demon.nl
COMPUTER TYPE (optional) 400/600XL/800XL/800XE/65XE/130XE
PROGRAMMING MAC/65 + ACTION! & Turbo-basic
FAVORITE PROGRAMS PAC-MAN / POLE POSITION
OTHER Running BBS Pro! 5.0b
24hr/7days 300-19200
+31-416-561927
** No download on-line yet...
LOOKING FOR Other BBS systems to network
with.

I had the same Idea several year ago but I had a bad internet connection at
that time, but I think when all
those REAL atari 8-bit users/supporter read this that they should join if
they want to be a community that wants to live on for years.....

Gtx,
Sysop*TXG

When I mentioned "the market", I was referring to the business of trading and selling amongst collectors and enthusiasts, since there is no retail market for these little gems anymore. I don't include flea markets, thrift stores, etc. in that assessment. In your wording above, you imply that it's impossible to come up with a true value of any item, thus making *your* original question a *ridiculous* one to begin with. BTW - Isn't talking about *4-bit* items on an *8-bit* discussion area just a wee bit *off-topic*? Jut my *two-bits*...

If you follow this newsgroup regularly, you know that very few of its contributors are so unidimensional as to discuss and collect only 1)Atari, 2)8-bit, 3)Computers. Other Atari (and even non-Atari) items are regularly -- and with welcome appreciation -- discussed. For example, what types of monitors or printers are best for use with Atari computers, or what type of software is best, or which game(s) are of highest quality. If you seek 1)Atari 2)8-bit 3)Computer-only discussions, I am quite certain you will be required to start your own newsgroup (and, frankly, you may end up being its only participant...).
Also, while it is understandable that you sought to "save face" by reconciling your initial comment to my post with a tortured definition of what you assumed a "market" sale to be (by the way, that's only YOUR assumption; I only originally said I bought the game, not that I bought it in ANY particular "market" as you define it), it remains a fact that you fail to recognize that for any particular game -- especially in a category of games as highly "collected" as Atari 2600 -- there exists a general price trading range which can be agreed upon by knowledgeable collectors. THIS is what my original post sought to ascertain, since I had asked "Can anyone provide me with an estimate (in US Dollars) of what they think it's worth?" In your most recent response, you now -- and equally fallaciously -- seem to suggest that there is a fixed, absolute price at which a game can be "valued".
This fails to recognize that markets are always fluctuating, and further bolsters your growing reputation as being "all over the board" on this topic.

Unless KoalaPainter has an option for the TouchTablet you are going to find it difficult to use it.
The KoalaPad and the TouchTablet have their x/y axis mirror imaged.
So not only is X the Y axis, and Y the X, but the +/- is reversed so up is down, left is right.

Well... First off, I thought this was an '8-bit' computer newsgroup, but since you are here... My local thrift store sells 2600 game carts for $0.49 each. If fact, they sell all their ''classic'' game carts for $0.49 each. Commodore, Atari 8-bit, 2600, 5200, 7800, TI,etc. I have seen Ikari Warriors there for that price. It's worth however is whatever the market and collectors are willing to pay. Therefore... it's worth exactly $13.00

What was "the best" Atari or 3rd Party
disk drive, and why? Atari users were/
are fortunate to have had a pretty wide
choice of drives, including those for
PAL systems (which I believe won't
work correctly with NTSC?). So, how
about it - what was "the best"?

Indus GT hands down if were talking stock drives.

1) Sweet case design.
2) Quiet
3) Functionality (Single/ED/DD)
4) Reliability.
5) Speed (ok, so Syncromesh sucks but it works)
6) Durability (metal case, overspec'd power supply)

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection. Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)
- Orphaned Computers & Games Systesms, pub. by Adam Trionfo & Chris Federico

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

<snip>

Hoo boy! Leave this newsgroup for just a few months and look what happens!
Look at the NAME of the of the newsgroup. COMP with means computer, not
games machines, not Nintendos, not 2600, not toasters. SYS systems?. Atari
(self-explanatory. 8-BIT. Which means discussions of ATARI 8-BITS!!!

Since you never answered my question in the first place, I thought maybe you
were avoiding the subject. And if you didn't like my answer about what the
value of 2600 carts, then ignore it. No need to be insulting and rude. You
only get insulting and rude replies in return.

2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion
about the Atari 8-bit family of computers, including the 400, 800, 1200XL,
600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari
newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Have a nice day.

3300. Re: Brag?!

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-04 00:00:00 UTC
From: Bowling <mbowlin1@tampabay.rr.com>
Message-ID: <z9LN2.92$um3.19255@newse3.tampabay.rr.com>
Source record: 53516

I always endeavor to extend politeness and courtesy. I thanked you for your original response, but then I declared the reasoning behind your answer to be silly (I apologize for relating that to you; I should have kept it to myself, because I'm certain it motivated you in your next reply to cally MY reasoning "ridiculous"). So, I shall be mature about it, and bury the hatchet (it looks like you probably have, also).
As for listing an occasional comment or inquiry about "2600" items, I remain in the group that feels it is perfectly okay to do so, as long as most posts DO relate to Atari 8-bitters (as mine do).
As to "having a nice day"...same to you! :)
--Mark

PS: Don't take offense to this, but...including the complete text from initial posts is not always the best thing to do.

3301. 1 Meg Upgrade - Success!

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-04 00:00:00 UTC
From: lwhite6497@aol.com

Source record: 53517

I just got my 130XE back from Bob Klaas,
upgraded to 1 Meg with the Newell 1-4 Meg
upgrade. I tried to install this upgrade
several years ago (~1992) and could not get it to
work, so it sat on the shelf until a couple of
weeks ago. Sent the XE and "bag of parts" to Bob,
and he worked his magic. He did a fantastic
job - installed sockets for easier maintenance,
hooked it all up, and it works great! He is most
highly recommended!!!

Ok, but let's not forget about the RanaSystems 1000. This is a superior drive as well, only lacking (IMHO) a built-in speeder. The things I like are the small footprint, metal case, push-button font panel with track display, write protect, unit ID display, and last error display buttons.

But the Indus is black...

>about it - what was "the best"?
>Larry

I am quite sure that there is absolutely no difference between PAL and NTSC disk drives. In fact, there is no such thing as a PAL drive. All this difference between PAL and NTSC is just related to video signal. Because of these differences, the clock frequency of the processor is slightly different, because the video signal is also based on the signal used for the processor clock.
Some of the timing is related to the video timing, like VBI and the number of display lines on the screen. Since the O.S. does some timer related things, some I/O frequency calculations for the cassette unit are also related to these clock rates, and thus differ in PAL and NTSC machines. This is because cassette stuff is A-sync.
Since all disk drives have their own clock, they are totally unaware of the type of system they are connected to.
That said, the HDI is nice. It is a 1.44 meg High Density interface, to which you can connect all sorts or drives, including Atari SF314 and SF354 drives. We use a Speedy 1050, which is a drive with an enhanced speed and double density capability. (sort of like a happy).
As you can see on the Pooldisk, we have lots of drives. The 1050 with Speedy are the ones we use most. Only problem with it is that it runs hot, so on a summers day, it sometimes fails. We leave the cover off, so it cools better. This can be prevented by using a switching power supply, as shown on the web page of Thomas Grasel.
Have to build one of these one of these days.

3305. Programming

MPP-1150 Parallel Printer Interface

by Supra Corporation

This interface will allow you to hook your Atari 8-bit computer (except the Atari 1200XL) to a parallel printer. It has a pass-through SIO port. The interface is in like-new condition.

High bidder will pay $3.20 for shipping in addition to the bid.

Starting bid is only $4, and there is no reserve price.

Stock drives: I prefer the Indus GT. It was a tank.

however, right before I shut down my Atari BBS (1987), I traded my Indus for a stock 1050 so I could put US Doublers in it - I preferred the USD 1050 to the Indus at that time. I also had 2 happy 1050's back then that I preferred above them all.

Today, on my current system, I use a Happy 1050 the most, a US 1050 second and that Indus GT third (which I got back from him in a trade for an IBM XT a few years ago).

Hehehe... I've also got one of those old Astra Big D's around here in a box - that had a DS/DD drive and a SS/DD drive in it. When this drive was first purchased, it was a real workhorse, but after several years on several different BBS's, it got tired. It's kinda flaky now.

Hi all,
A unique chance to own a bit of rubbish/history (delete as required).
10 bound vols of the "Home Computer Advanced Course", over 1900 colour pages covering computing in the 1980's. Includes items on Atari (8&16bit)/BBC/SPECTRUM/MAC/C64/ORIC/MSX/ and some rather exotic machines from those innocent times. Everything from game reviews to teach yourself machine code. Helpfull advice such as "don't pick too high a resolution monitor as by blurring the pixels a more pleasing picture is achieved". It will make you laugh and cry! Just 10pounds, if you want it posted it'll be 20pounds.
Regards, Steve.

I took a peek at the vote (www.freevote.com/booth/8bit) and tallied up the total Atari 8-bit versus the Commodores and it was interesting. Atari=67 Commodore=66

Yes I know that this vote is non-scientific and doesn't amount to a hill of beans, but it's nice to know there are as many Atarians who think fondly of their machines as there are Commodore enthusiasts. Only, question... What in the heck is a SAM Coupe and why would *anybody* vote for a Dragon?!?

:)

The Indus GT has to be the best LOOKING floppy drive ever created. ALmost over- engineered, IMHO.

SOMEBODY has to vote for the Percom drive, though! Yeah, it looks like it was made from a kit, but it is dead reliable, expandable, and rugged. If nothing else, you can take the controller card out and mount it in a PC enclosure with 4 HH drives.

I had an Amdek 3" drive for awhile. Another well-engineered design (the fan is a nice touch), but it was a little too far ahead of its time. Kinda like the Beta video casette.

If I'm not mistaken, the Amstrad CP/M-based computer used the 3" floppies. This was a rather popular machine in Europe, and I would be surprised if the floppies were no longer available.

3314. Playing Ultima series with Atari800Win Emulator

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-05 00:00:00 UTC
From: nhaas@one.net
Message-ID: <37091bf1.29139436@news2.one.net>
Source record: 53442

I know, I know blasphemous post! Who would use an emulator for ANYTHING when the real deal is so much better. Well I just dont have room to set my 8-bit up. The PC takes too much space.

Here is my question. I am trying to play Ultima 3 on my PC with Atari800Win. The game loads and seems to run fine, but I can't control my guy!! I remember the movement keys on the game being mapped to the cursor controls (I think). But on the PC, those keys are in bizarre locations that don't make for ease of use.

Anyone have any suggestions on how to overcome this? Surely someone must have attempted to play these favorites on an emulated Atari.

Thanks for any info..

-Nick

I have a Speedy 1050 here (thanks again Ernest), and I
can verify that it will not load its built software
on NTSC computers due to its high SIO transfer
rate.

It works peachy on the PAL 800XL I picked up. I have not looked
into the 'why' of it ye.

Well, this is obviously not on purpose. I mean, the PAL machines have
some differences in timing because of the video differences. They
were designed like that. I do not think Atari ever designed PAL disk
drives. This sounds more like a programming error in the ROM for the
XF551. That they (or Bob) fixed it does not mean that there is such a
thing as a PAL drive. The specifications for the SIO protocol and
timing can be found in the hardware manual. It clearly states that
the I/O rate is 19200 bps. It also specifies the timing for the
command frames and all that. The specifications are the same for all
machines and devices, since what else would be the use for
specifications. Everything should comply. If the PAL machines
do not comply with this, this is a programming error in the PAL
version of the O.S. rom of the XL/XE. Apparently they did not
test the XF551 on PAL machines.
I suppose fixing it in the offensive drive was easier.

I do not know anything about the internals of the Speedy and other
high speed I/O stuff. Since this is all not in the hardware manual,
it is hard to tell if it will work on other machines. The Speedy was
designed in Germany. Probably it was not tested at all on NTSC
machines. (Just like demos often do not run on NTSC machines
simply because the designers did not have one to test it on.)
I have not tested the Speedy on any of my NTSC machines, even
though I do have some. Maybe someone with experience with
this can comment on this.
Regarding the HDI, as far as I know, the HDI is currently not being
manufactured because the chips that are used are very hard to get.
Especially the floppy controller. And then, if you could get a bunch,
you would have to have a production run of PCB's made. The design is
available though, so you could build your own, if you can find the
parts. Erhard Putz designed it.

I just recently found out that there are indeed 2 versions of Dig Dug for the Atari 8-bit computers (thanks James Carter!). The story I always heard was that the later version had better graphics and faster gameplay.

I've owned the orignal 1982 version since it came out (brown case, brown label), and while it was a little slow, the graphics were great. I finally picked up a silver label version (1983). The game does indeed play faster. The graphics are compressed, to give the screen the appearance of a game where the monitor is on its side (long and narrow).

However, this has resulted in much smaller sprites, which are pretty ugly. The Pookas and Fygars are no longer red and green. Pookas are a sickly peach colored and Fygars are solid green. The Fygars flame breath is no longer animated, but just a single sprite frame. Even the rocks and flowers are changed for the worse.

The selection screen is nicer on the old version as well; music plays when you select 1 or 2 player, the level indicators are multi-colored fruits and veggies. The 83 version removes the music, and has single color fruits and veggies.

Now when James sent me a scan of his 2 versions, the label on his silver cart is copyrighted 1986! So this leads me to wonder if there is perhaps a 3rd version, which has the faster gameplay but better sprites than the 83 version.

Anyone have the 83 and 86 label versions?

> NTSC disk drives.

When atari first made the XF551, it would not work with PAL computers
because of the slight difference in the timings and baud rate (Pal is
slightly slower). Atari quickly fixed that. When Bob Puf of Css first
did the XF upgrades, the same problem emereged. I sent him the PAL
xf551 rom (about 8 bytes different) and he came up with a new rom.
This latest rom, both orignal patch and the upgrade, from what i have
seen work equally on NTSC and PAL.
I think When the rom was first done, atari alowed for the NTSC baud
rate and faster instead of slower. All other drives are fine.

Hi Ernest-
My only knowledge of the compatability
issue is that one person who bought a
Speedy upgrade could not get it to work
with his US system. That's the only report I've heard where someone has
actually tried it. You mention timing which would be the
crux of the issue. Wouldn't the SIO
communication rates be clocked differently?
I'm pretty sure that I have seen that the SIO
rates are different (but close) between the
two types of machines.
And speaking of the HDI, do you know if it
is still being sold?
Regards,
Larry

My own experience with the RANA was
somewhat spotty. I bought one when they
first came out (probably a mistake), and it
was DOA. Received a replacement, and
it was great in single density, but in D/D, it
would not even read a disk it wrote. Sent
it back. "Head azimuth problems", they
said. The third one was good.
A couple of years later, I wanted another D/D
drive, so I bought another one, and this
was for $100 new since RANA had bitten the
dust. This one had a track alignment problem.
It would read anything it wrote, but not from
other drives. Took out the tools and got
it working after a little trial and error. The
need for speed took me to 1050 Happy's.
The RANA's were traded, but after I got a couple of good ones, they had worked
well.

Can a SF314 be used with a 130XE ? It was made for the STs and I
use one with my ST. At the very least, IF it is compatible, you would
need an adapter cable for the 130XE.

Source record: 53532

I think the XFD602 drive is the best, or the AMDEK 3"...

The advantage of the XFD602 is:

Supports US-DOUBLER/INDUS GT and normal modes (I thougt XF551 also).
It contains 2 360Kb drives running at 69.000/82.000 or 19.200 normal speed.
It has NO track buffering but a good programmed logic. The only problem is
that only
SpartaDOS X can handle the 82.000 speed for normal SpartaDOS this is going
to fast....

AMDEK 3'

Oke, finding 3" floppy's is hard (when somebody can help, please send me an
e-mail)
But the nice option is that you can attach 4 normal IBM drives like 3.5" and
5.25" and can use them at 720Kb. It's very nice for backup....

I have the HDI which can do 1.44Mb but you have to format the disks by using
2 programs and then
software has to support it. I have a program called HD-BACKUP PRO! andit
supports until 720Kb so
HDI will give me some problems...

3331. FS/T: Atari 8-bit computer items [04/05/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-05 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <3713884a.22419332@news.nls.net>
Source record: 53534

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 04/05/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}

$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 3.00 3-D Tic-Tac-Toe
$ 3.00 Alphabet Zoo [Spinnaker] -- no label
$ 3.00 Atariwriter
$ 3.00 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede
$ 3.00 Dig Dug
$ 3.00 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 5.00 Gateway to Apshai [Epyx]
$ 1.25 Missile Command
$ 2.50 Pac-Man
$ 3.00 Qix
$ 1.25 Space Invaders
$ 2.50 Star Raiders
$ 2.50 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 4.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Since the SF314 does not have its own microprocessor and controller, it would
also need something like an XF551 or a Black Box Floppy Baord.

>just the game "Mail Order Monsters"

Atari games are usually written in Assembly language and not in a high-level language like C or Pascal. Therefore, you need a disassembler, not a decompiler.

A good disassembly/debugging environment can be found in MAE (Macro Assembler Editor) by John Harris (no, I don't know exactly where to find it). An even better way to hack into software - which I have used to successfully modify the game Joust - is the monitor built in to the XL-It emulator.

By the way, the result of this hack can be found at my website: http://www.sitcom.co.il/users/itayc

Oops. The software DOES load OK on NTSC machines, it just wont copy
anything. Works OK on the PAL machine. Sorry for the mixup, fuzzy
brain syndrome :)

Howdy Bob

All Atari 8 bit's seem to use the same MMU, EXCEPT the XEGS. It uses one of the outputs as an input. PB6 is connected to this one. I believe it is pin 13.

3341. Re: Hmmm, Are there *3* versions of Atari 8-bit "Dig Dug"?

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-06 00:00:00 UTC
From: Stephen Knox <gooch@erols.comX>
Message-ID: <3709FD19.75D52379@erols.comX>
Source record: 53457
Cross-posted to: comp.sys.atari.8bit,rec.games.video.classic,rec.games.video.atari

When I was younger I got the 'crappy' Dig Dug and compared it with my next door neighbors C64 version(very colorful and fast). The original Atari version was a joke. I made mention of this awhile back along with a reference to Donkey Kong being really good. The author of DK sent me an email thanking me for the comments, he also said they couldn't believe the guy Atari gave Dig Dug to. It appeared the programmer was very junior and over his head for programming the game. The newer version mimics the Atari 5200 version. It appears Atari did a rewrite since the 5200 version would sell like 2600 Pac Man if released! If the 5200 didnt exist I doubt Atari would've re-released the Atari 800 lousy version. I still have both and no there wasn't a 3rd version released that I know of.

Thats my story and I'm sticking with it!

I'm confused...WHICH one does most everyone think is "best", and how is it identified? If it is Silver Label, 1983, is that the NEWEST version? Was the "1986" version just a re-release of the OLD 1982 version? What?

I'm with Andrew on this one, I think the 82 version is much better than the 83, but
I think we're probably in a minority of two.

Regardless of the case, the original fires up to a 1982 copyright date for both
Namco and Atari. The later version has a 1982 copyright for Namco, but 1983 for Atari.

Ah, but what those standard parts can do can be quite amazing.
Programming the 6845 CRTC at the low level produces some nice
effects.

The speccy had a fixed size screen, a fixed display, and for that
reason wasn't so good. I know demo programmers have produced good
demos for it (increasing number of colours in a block), but the CPC
can do much better (full-overscan screen without much effort).

The C64 has some nice demos too...

Honestly, I considered the Dig Dug clone "Mr.Dig" by Microdeal the best version of that game. Yet, since my tape original copy is corrupt, I haven't played it for years.

Thorsten

Only two versions of Dig Dug. The later release was just the same game
with an updated label.

Don't forget there's also 2 versions of Final legacy and Qix as well.

You know, that brings up a very sad chapter in the history of computing.
Today we hear lots of people screaming about open code. It's even timed to
coincide with the problems that Microsoft (and I don't feel one bit sorry
for them) is now having with the Justice Department.

Yet, if open code was the standard when all the 8-bit machines were in their
hey-day, they would all have come much closer to their fullest potential.
Maybe I'm crying over spilled milk, but that's my $0.02.

A little old grey-bearded man is still assembling them -- lovingly --
one-by-one (since the bankruptcy wards hauled off the factory assembly-line
equipment), in a small maintenance room in an abandoned warehouse in the
east end of Sunnyvale, California, USA.

IIRC, Atari did that only when pressed to do so. At least that's the
impression that Stephen Levy's "Hackers" leaves me with. I really need an
Atari historian to back me up or refute it.

Curt?

Meanwhile, I think there were tighter restrictions in some of the other
8-bit computers.

But it went beyond that. Every time a piece of software was released
commercially, it was copyrighted. Theoretically at least, nobody could
improve on it without some kind of legal penalty.

3382. "Lost Message" on XF551 Upgrade

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-07 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990406204824.25132.00003465@ng66.aol.com>
Source record: 53479

Steve Tucker mentioned that Bob Woolley's
message might be found on dejanews. Searched
on XF551 and Bob's email address, and there were
18 messages, including "the lost message" (which
obviously wasn't lost.) Didn't know an extensive archive
like that existed...

It follows:

JTKirk wrote:
>
> Hmmm... I think some time ago someone also posted the info on how to
> upgrade the XF551 to a high-density drive... or was it something else?
> I didn't keep that posting, and now I regret it.
>
> --
> _____ ____---____ Marco Antonio Checa Funcke
> _____D /-/---_----' mailto:mcheca@li.urp.edu.pe,
> _H__/_/ jtkirk@usa.net,JTKirk@HoTMaiL.com
> '-_____|(http://www.GeoCities.com/Hollywood/2645

---
actually, I have added to the upgrade a little... the XF551 will only
switch density from DD to SD, so if you have a DD disk and the drive has
been reading a SD disk, the DD disk will just NAK out on you because the
drive will never try DD. If you are reading a DD disk, you can insert a
SD disk and the drive will figure it out OK. This trait is annoying at
best, so I added a patch to allow the drive to alternately try either
density until it gets it right. This works much better for me.

Yeah, most 8 bit devotees will vote for the system they grew up with. I realy cant see why though, people should be more open minded. I vote for c64 and still own and use my amstrad of 12 years. Why? I feel the c64 has simply the best versions of popular 8 bit software with very few exceptions. Doesnt mean I dont get all misty eyed with nostalgia when I use my favourite old cpc software though ;)

Well, Final Legacy has the same gameplay. The only difference is one version has text that you highlight to select what type of battle you want (ie. sea to air, sea to land, etc.) the other "international" version has icons in place of the text.

As for Qix, I can't remember what the differences are off the top of my head but there is a regular "Qix" and also a "Qix Revision 7".

I'd have to dig out my carts and check the two.

The games are the same, it's just a matter of when the cartridge was
made. I bought mine in 1981 and it says "Star Raider" on the cart.
In 1983 I bought one for my brother-in-law and it says "Star Raiders".

I don't know if these are released, but I have files on disc, called Qix
and Qix II. Qix II is much better graphics wise.

If people must go along with this whole "which computer is best" thing then perhaps instead of casting one vote we should be able to rank our top 3 or 5. I myself for example grew up on the C64 but I also have a soft spot for the Acorn BBC series, one of which an old friend used to own.

For Auction: Atarian Video Game Magazine

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=88428370

ï¿½Premier Issueï¿½

August 1989

This hard-to-find collectable Atari video game magazine is in essentially brand-new condition. Thereï¿½s information here about 2600, 7800, and XE video game systems. Atarian was the official magazine of the Atarian Video Game Club, sponsored by Atari (U.S.) Corp. A partial list of the contents is below:

Reviews:

Crystal Castles (2600, XE), Dark Chambers (2600, 7800, XE), Super Football (2600), Super Skateboardinï¿½ (7800), Bumpï¿½nï¿½Jump (2600), Hardball (XE), Ballblazer (7800, XE), Crackï¿½ed (7800), Blue Max (XE), Crossbow (2600, 7800, XE), Commando (2600, 7800, XE)

Strategy:

Jungle Hunt (2600, XE), Thunderfox (XE), Double Dunk (2600)

Previews:

Off the Wall (2600), Radar Lock (2600), Mean 18 Golf (7800, XE), Xenophobe (7800, XE), Midi-Maze (XE), Mat-Mania (7800)

Tips and Tricks:

Asteroids (7800, XE), Choplifter! (7800), Crystal Castles (XE), Desert Falcon (7800), Pac-Man family (all), Necromancer (XE), Ballblazer (7800, XE), Tower Toppler (7800), Hat Trick (7800), Space Invaders (2600), Kung-Fu Master (2600), Xevious (7800), Star Raiders II (XE)

Buyer will pay $3 for shipping in addition to the bid. United States bidders ONLY please. I will not ship items outside the United States.

A scan of the cover of the magazine is available at the link above, and a scan of the full Table of Contents will be posted there soon as well.

Please, serious bidders only. Thank you.

I presume you mean "810" disk drive. If so, there are 4 thin, circular plastic
covers on
the top of the drive at the corners. There
is usually a slight depression. You have to
remove them carefully. Under the covers,
there are open "tubes" with screws at the
bottom that hold the top onto the base. BTW,
the covers are held on with contact cement,
but if you are careful, they can be reattached
with no problems. Good luck.

I had a 300 baud model and an 8bit and Compuserve way back then. There was chat much like today's IRC I recall, and online multiplayer text games. The thrill was definitely there.

BBS's were this thing I had heard about but not participated. The main thing I heard about were the pirated games you could get off BBS's...

Anyhow, a professor at my college said he had a couple 52 baud modems from even farther back. That's like my typing speed I guess.

You know, I had a 50 baud telex machine attached to my Atari 800.
I uses baudot code. The thing was real slow. But it did print.
I wrote my own printer driver for it. The Atari produces FSK tones
using POKEY, which was then output to a decoder driving the
telex machine. Later I had a 300 baud Teletype ASR33 which
was connected to the 850 current loop interface.
Gee, I *am* old...
BTW our BBS still supports 300 baud.

Source record: 53424

They weren't mapped to the cursor keys, it was something like *=>south,
Return=>north ==>north too. If you look at a real Atari, they are all
the keys to the left of the Return key. Maybe + and - in there too.

Does anyone know of any software out there that would convert GIF or any other graphics format curently available to the standard atari 4 color mode (Koala or micro mode). I know there is Jview that converts pictures but it does it to an unique format and to 255 colors. Also if you do have such a program please pass it my way :)

Thanks,
Louis Di Fazio

JVIEW will also convert GIFs to GR.8 in monochrome. I know because I did this
once
during beta testing for J.D. Potter, the author. I was then able to use
Billboard to print the graphic to an Epson 9-pin, and I was able to send a
billboard file to a BBS friend to print out on his DeskJet with the Epson
emulator cartridge. I never did see it, but He said it looked great!

>4 HH drives.

Yep, I still have my Percom"AT-88" that I bought new back in 1984, and it
still works great (last time I had it set up). I seem to remember that it
always had to be DRIVE ONE since there were no drive select switches.
[However, this drive was my second AT-88 - the first one arrived DOA and the
one I have now was the replacement].

I never had an Indus (they sure looked cool though!), but I did have 2 RANA
1000s (somewhat unreliable) and a Happy 810, Happy 1050, and a regular 1050.

Now I've only got the Percom, 1 RANA, and 1 regular 1050 though. Shoulda kept
a Happy... :^(

3423. Question on 800XL Power Supply

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-09 00:00:00 UTC
From: Ted O'Neill <toneill@best.com>
Message-ID: <370E61E1.4798@best.com>
Source record: 53435

I have tried using a 5V DC Atari power supply (#CO 70042) with my new (to me!) 800XL and it seems to work fine. The problem is that this power supply is only rated at 1A and the FAQ says the 800XL power supply is 1.5A. This is the only PS I have... (it didn't come with the machine, I found them separately).

What all are other 800XL owners using?

3424. Re: Question on 800XL Power Supply

Source record: 53346

Hi,

First, its an 810, not an 850 an 850 is a 4 port serial, single port parallel interface. The screws are located underneathe the plastic covers on the the top of the drive in the four corners, use an exacto-blade to carefully peel them back, unscrew
the four screws and lift the cover off and your ready to start troubleshooting. B&C Atari Sales has Atari 810 diagnostic cartridges to help fix several 810 disk drive problems, drop them an email, their site is: www.myatari.com

I went into a flea market several weeks ago and found a Percom AT-88 for $2.50 - it was in with the junk stuff that supposedly didn't work - I took it home and tested it and it works perfectly. I understand that I can put a double-sided drive mech in this. Is that right?

I also went back to where they had a bunch of TV's. There were these two ladies looking at what they thought was a TV complaining that they could not get a picture on it. The sales person offered it to them for $10 as is and they said no - it didn't "have no picture". I was holding the Percom and told the sales guy that I would buy the Percom for the $2.50 they were asking if he'd throw in the "TV" for an additional $2.50. He said fine but the "TV" didn't work.

The "TV" was an Amdek Color 1 Plus Monitor which I took home to add to my collection (I already had two of them). Not only was it the cheapest but it has the best picture of all three.

All in all, an interesting day at the flea market...

Hi Steven,

yes, there is something ... it has to do with separate MO (motor on) and
DSx (drive select) signals.

Some drives have jumpers for "motor on with DS".

It may help if you:

- attach mechanics to power supply
- disconnect drive from bus
- switch on
- short shugart bus pin 16 to ground (motor must go on)
- open pin 16
- short pin 6 (DS3) or 10 (DS0) or 12 (DS1) or 14 (DS2) to ground
the busy light must go on at DS0 select, otherwise you have to
rejumper the drive

Regards, Erhard

Funny.

I just clicked on the link and it worked.

No, I just didn't have time to get any further info on it, but try it again.

I must respectfully disagree. I've had three different Rana
drives, five Indus GT's and even more 1050's. The Rana's gave me more
problems than all of the others.

3442. Genealogy software?

Hi

I'm looking for genealogy software. I;ve tried Family Tree but it's a bit 'low- tech'. Does anyone have any quality genealogy software they could let me have an image of?

I read somewhere that Family History is quite good? Are there any others?

Your help greatly appreciated.

Best wishes

JG

3444. Atari 800XL Question...

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-10 00:00:00 UTC
From: AceMan <aceman@ix.netcom.com>
Message-ID: <01be836d$a12e69c0$e28cd3c6@jb>
Source record: 53360

I've just aquired an Atari 800XL with what looks to be like a complete package - It came with a 1050 Disk Drive for 5 1/4 disks, a printer, paddles, lots of games, and all the connectors.

I've looked it over but can't seem to get anything to happen upon connecting it together. I've read that the system itself had a self test of some sort, but I can't seem to get that up either. Can some one give me a link to a web site or possibly explain how I need to hook this system up to get it working? The one thing I think may be the problem is on the back of the system there is a monitor port, for which I dont have a cable - but there is also what looks to be an AV port (switch) that I am assuming is like a video out. Any help would be greatly appreaciated.

Email to aceman@ix.netcom.com

Thanks.

John

This is probably a much better idea.

Here's my vote...

1) CPC+
2) CPC
3) C64

Now don't argue with me about counting the CPC twice, because I've had
many arguments with C64 owners who say that since the architecture was
modified you can't compare the CPC+ to the C64, and that makes it a
different machine completely! Maybe you should set some ground rules for
voting!

3447. Help! ProSystem cable problem...

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-10 00:00:00 UTC
From: Richard Atkinson <rga24@cam.ac.uk>
Message-ID: <Pine.WNT.4.10.9904101907580.-1025569-100000@hapsby.chu.cam.ac.uk>
Source record: 53363

Greetings csa8. I have just built a ProSystem cable and it doesn't seem to work - the program reports "can't sync with drive" type errors when I try to use it. Are there any common problems with the cable I should know about?

In the 8 bit CBM world, the equivalent cable is called 'X1541'. There are many reported problems with I/O chipsets on newer motherboards, so much so that a second cable (XE1541) has been designed. I wondered if there are any similar problems with the ProSystem.

Thankyou,

Richard

3448. couple of avalon hill games

I have a couple of avalon hill games on cassette that I would
love to play again. It would be nice If these were available
somewhere to download so I could play them using the
win800 emulator. They are sort of obscure games so I
probably am going to have to dig out the ole atari 410.

The games are Guns of Fort defiance and
Lords of Karma.

I was able to find a copy of telengard on the net (also
by avalon hill). That was an interesting cassette game.
It loaded in three separate parts. It would take about
15 minutes for the game to get up and running (if it loaded
in the first try).

Thanks for any help. Also thanks to this group I was able
to find the demo I was looking for it was called passionatly.

In case you just wanna do email ...
There are some nets providing internet email as textfile up-/download
via x/y/z modem.

Connect a modem to your 8-Bit and transfer the file using BobTerm.

Write your own TurboBasic program to read/write mail.

Use ARC/UNARC to (un)pack files before/after down-/upload.

Regards, Erhard

You should definately try these (you will not regret !!!)

http://members.aol.com/macfalkner/atari/
http://www.hcrburk.de/

In the first you will find ASSI and DASSI which are assembler and
disassembler, in the second you will find Atari Filemangement (AFM),
something like SIO2PC but with GUI running under W32. Manage your
ATR and XFD files, right-click a file and run emulator or any other
plug-in.

Tell me what you think about it.

Ask me in case you have questions.

Regards, Erhard

Hi Alan,

I guess I agree with what you say.

I love my 8-Bit because I know what it does - I can control it.

The only way to control a PC with a lot of soft installed is to
unplug the phone line ... one never knows ... at least I use an
external modem set to be noisy

And that's only the surface.

Hi Folks
I hope some of you can advise me please...
I just picked up an old Amstrad PC1512 with a 650mb HD but no discs, I can't get the thing to boot up although it does check the floppy drive and the hard drive in the process. The only disc I do have that I can try is a DOS 6.22 boot disc 5 1/4 inch 360k DD , but it comes up with a non system disc error.
I think I need another boot disc and an operating system of some sort to load onto the hard drive. My problem is I don't know much about the Amstrad but I do want to try and get it up and running for my kids...The floppy drive is an old 5 1/4 inch but I'm not sure if it reads 360k or 720k is this right...and can I get an operating system and/or a boot disc anywhere. Also if I do get it running are there any games or programs available for me and my kids to play with....silly old fool:-))
Thanks for reading this far...
Regards Lawrence.....@.....www.f-deans.freeserve.co.uk

PS I do beleive it's been upgraded to something other than 1512 but I'm not sure what. I'm sorry about the cross post please reply to one group only or to my email address which is l_deans@bigfoot.com

That was my first computer. You should have a 13 pin cable that will connect from the back of the machine to the 1050 drive. You can either hook up to the audio/video port of a TV or you should have (or can maybe purchase at Radio Shack or some other electronics store) a cable with a box that you hook to the antenna of the TV.

To use the disk drive, find any of those 51/4" disk that may have DOS copied to it. Turn on the disk drive, put in the disk, and then turn on the 800XL.

If you just turn on the machine, you will get to Atari basic.

American Technavision is offically out of the Atari business, and they
have closed thier location listed in the FAQ. That have some Supra
printer interfaces left, but zero SIO cables.

BEST and B&C both have SIO cables for around $10 each. (ouch)

Steve is right. BBCS was promised as a poor man's version of
CompuServe that got slammed by just about all Atari SysOps back then.
In fact, out of the hundreds of Atari boards I called in those days, I
can't remember more than one or two attempting to use it.

I ran FoReM Xe myself as did most of the other SysOps I knew. I did
have a friend who ran Carina BBS and loved it. BBS Express was
probably the simplest program to run (guessing) and it is still being
worked on today by different people. If I were going to run an Atari
BBS on an Atari computer today, BBS Express Pro is what I would use.

Hi Bob,

if you tell the FDC to step twice, it thinks it is on track 80 while
the drive in fact is on drive 40. If you now initiate a command you
get a wrong track error, since the FDC reads out the sector headers
on disk.

So I dare say this is NOT sufficient :-))

This is why people implemented double-stepping on the drive mechanics.

Regards, Erhard

Dear fellow Atarians,

It is with great pleasure that I am able to tell the following.

One week ago I said I would set up a list of Atarians should I receive mail from 20 people giving their name, E-mail address, and state. For the time being I was focusing on America.

I received 30 in the first week!

From this, I already have quite a few states with multiple representatives, some close to each other. This is what I wanted to find out, and in fact, what I knew to be true.

After talking to Kent Kordes in the chat session held at the Atari Users of North Texas website, he said that between 800-1000 different Atari users and gamers buy from him in a year! And that's just of the people who know of him. There must be HUNDREDS more who exist oblivious to the fact that anyone continues to enjoy/use Atari equipment besides themselves.

Make your year and someone else's by sending in your information. The sooner this happens, the sooner we can get some connections going. Let's blanket our fair country with Atari fandom!

Please send the following information to greg@atariusers.com

Name:
E-mail:
State: (City optional)

BTW... I got a method going now which is fairly easy to maintain... so EVERYONE IN THE WORLD SEND IN THIS INFORMATION. I might not get to the information as fast since America is my top priority, but the more addresses I get, the more I can stack those up, the sooner we can find your Atarian neighbor. ;)

Take care and talk soon!

Doctor Clu

PS:

Feel free to update my information as far as clubs go.
If you would like to get your country blanketed with Atari fandom... write me (so I will know who to forward addresses to when I find them)

If they're out there.. we'll find them.. :)

Reasons to hate BBCS: How about because it didn't work! I tried
to run it and never had it going for more than a day without locking up.
It was written on an Apple II and I don't think it was ever de-bugged
properly on the Atari. I have only encountered one person in the last 15
years who claimed they had it running and I'm stilll skeptical. Let's
hear it for BBS Express and hacked up versions of FoReM.! :)

Hi,

I recently dug up my old Atari 800XL from the attic, only problem is I'd forgotten about the problem I was having with it about 5 years ago before it got consigned to the attic.

After playing for about 15-20 minutes the TV screen, which had been perfectly clear, started cracking up with a pattern of fuzzy horizontal lines which moves rapidly up the screen in waves until eventually the picture is useless.

This has happened with different TV sets, both PAL, and I don't know where to even start looking.

If anyone has had similar problems then any advice would be very useful. I'm trying to get my head around PCXformer as well but I've forgotten how to use the Atari OS and the clicking noise when you type just isn't the same on a PC...

Thanks for the help
I did question the 650mb HD but I was assured it was a 650 I will find out if I get it running.
The HD is not directly attached to the motherboard but through an adapter PCI card, although I don't know if this is normal for Amstrads. The machine has been upgraded but I don't know the upgraded specification details.
I do know that it is the original floppy drive, thanks that was a big help. Can you tell me what operating system is normally used as I have copies of DOS 6.22 but the boot disc doesn't work. 360k floppy...
Thanks also for the Web address it's a big help..
Regards Lawrence
I've replied to all crossposts as you didn't mention which NG you were posting from :-)) sorry again.....

Hi

Yes, this is the problem.

Over here in the UK it's the same, I'd be surprised if it wasn't;)

There are many, many users that didn't and don't know that the Atari scene is still going and even more don't realise that they can get their Atari's on the internet!!!! Let alone that there are AC and ST+. You can tell in their voice when they realise they are NOT on their own;)

The problem is reaching the masses! How do you let them know!

Thanks. But on the back of the 800XL - which line goes tot he TV - the one
that says Switch Box, or the one that says monitor. I only ask because I
don't have a cable for the one that syas monitor or I would have tried it.

I believe that I had mine up and running for about 15 consecutive days
once. Other than that it was every other day.

Geez, the "status screen" didn't even work! People would have to call
twice, once to reset the system and then again to connect!

Is Scott Brause still alive? I'd like to e-mail him a thing or two.

Having got the ProSystem cable to work I am now looking for some game files, especially of cartridge ROMs, to write to disk. There must be some large emulator archives out there somewhere... does anyone know where? I've seen the umich.edu archive but I was hoping to find files in simple .ATR or .PRO formats - any ideas?

Richard

The 1512 doesn't support PCI. Not unless Alan Sugar has a time
machine and isn't telling anyone.

I fell in love with BBSes on Montreal's Pig and Whistle BBS, which spent several months "running" BBCS. Were there problems? Yes. But was it also the best local BBS? Also yes. (With apologies to John C and The Atari Connection)

I've had similar problems in the past, but the problem would occur
immediately, instead of 15-20 minutes later. It was always the power supply.
I would believe it is the power supply as well in your case. Anyone else
have any input on this?

Yep. I originally put up my BBS on a hacked up A.M.I.S. system and then switched to hacked Forem's until I started beta testing BBS:Express (1986?) I think. Somewhere during all those Forem's I tried to get BBCS to run. I remember liking the concept a lot, but like everyone else, couldn't get the damn thing to run for more than a few hours at a time. But I was running the version that Brause released before Antic got their hands on it. I was curious as to whether or not it ever got fixed. From what I read here, apparently not.

Here in Phoenix, AZ there was quite a bit of machine wars between Atarians
and Commodore users. Usually in the form of Commodore users trying to crash
the Atari BBSes and usually succeeding. This was in the early 1980's. Later
the "war" was between the 8-bit Atarians and ST users. The "hostilities"
were more subtle, dealing between the organization of the two groups of users
as opposed to the two machines. But that's another story.

If Anyone in the tri-state region wants to browse Atari stuff, Ive got lots. I am only keeping one 800XL(who needs 4?), 256k, omnimon/some 810 drives, one 1050 drive, and my ATR8000(I have come to love this thing!). I have LOTS of documentation, books, hardware, and some software. I may hang on to a modem also. I have 2 130XE, 1 65XE, 3 800XL, 2 800, 1 2600, 1 XEGS...etc.

I do not presently have the time to mail items, so anyone wishing to scavenge must be able to do so in person.

Paul Davis, I owe you a book so if you read this message email me your address again(I lost it :( ) and I will send it to you. I love the music on those CD's and if you have more lets talk trade!

Prices are very cheap for big things and free for other stuff.

The 5-pin DIN ("Monitor") output is for a composite video monitor i.e. one
that would work hooked up to the audio and video outputs on a VCR. The
RCA-type jack ("Switchbox") is a straight 75 ohm RF signal, i.e. you can
hook it directly to a "cable ready" TV or you can run it through a balun
to a 300 ohm TV antenna hook up.

I remember reading somewhere that one of the biggest problems with BBCS
was due to Antic Magazine (who sold the program through their catalog).
Apparently they were mixing and matching different versions and source
codes of BBCS, which caused most of the bugs and crashes users
experienced.

I never saw a BBS that used a program myself, but it seemed like most
sysops had the general consensus that BBCS was awful.

Modern motherboards won't fit the 1512's case. The original machine
did have ISA slots though - 8-bit only, IIRC - so the 650Mb HDD
could be a SCSI device I suppose. Not sure whether it was possible
to boot off any of the ancient 8-bit SCSI cards though. And this is
off-topic for this newsgroup.

My MPP-1150 Parallel Printer interface has only a few hours left in auction and is only selling for $4.25! $4.50 will take it - doesn't _anyone_ need one? I just want to make this worth my time and trouble selling and shipping. =)

MPP-1150 Parallel Printer Interface

by Supra Corporation

This interface will allow you to hook your Atari 8-bit computer (except the Atari 1200XL) to a parallel printer. It has a pass-through SIO port. The interface is in like-new condition. The instruction manual is included.

High bidder will pay $3.20 for shipping in addition to the bid.

By using another ISA IDE card, it's indeed possible to get big disks. I have a Promise EIDE card that works for most (not all) computers. It supports up to 4 big HD's or whatever. Higher speed and autodetect HD's

If his BIOS is not setup correctly, it won't work, but if HD is set to type 1 (10Mb HD) the card kicks in and it's bios takes over.

So, it's possible to use even 4Gb or whatever (I've tested 2Gb disks and it works fine)

3508. Atari 400/800 technical books available

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-11 00:00:00 UTC
From: Richard Deglin <rdeglin@topaztech.com>
Message-ID: <7er6bk$lra@dfw-ixnews7.ix.netcom.com>
Source record: 53329

I have the following books available for best offer:

1. Mapping the Atari - complete memory map for programmers

2. Compute's First Book of Atari Graphics - basic and advanced graphics programming

3. Inside Atari DOS - internals programming manual with OS source code

4. Your Atari Computer - guide to programming, operation, peripherals

Please contact me directly via email as I will not be reading this newsgroup.

rdeglin@*NOSPAM_.ix.netcom.com._NOSPAM*

Just delete the *NOSPAM_ stuff!

Message-ID: <371153FE.E5E76FF8@sprintmail.com>
Source record: 53332

I pulled the old atari 800 from the closet to load some games for my nephew to play. Some of the games are on the old atari 410 cassete recorder. Anyone know the command to start reading in the tape? It's been years since I've used this thing!

Thanks for the help-
Paul

You should tell the story! I for one would like to hear of those BBS wars!
It would be cool if someone could provide jeering messages captured from
those days, and explain the masterstrokes used to crash the opponent's BBS.
And the sad sad fate as all the BBS's died off.

Source record: 53334

wellll,,,, I have not tried this particular function on an XF551 or any
other controller, but:

you can step in or step out and disable Track Update in the controller
(bit 4=0)
you can seek and disable both Track Update and Verify (bit 2=0)

either of these two functions may allow you to read the "wrong" track. the
controller really does not care what track you are on so much - not like
he has to have the sector address correct.....

like I said, never tried it myself --- may have to add it to my project
list!

3517. "Making Traks"

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-11 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990410203029.29983.00001128@ng38.aol.com>
Source record: 53386

Just added a Trak AT D2 to my collection.
Track buffered - fast and quiet. All in all it
works good except the digital track display
shows the wrong track numbers. For
instance it shows "42" when reading the
directory. Anybody know anything
about digital displays?
Thanks,
Larry

3518. Re: Advice needed for Amstrad PC 1512

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-11 00:00:00 UTC
From: mig <tous@club-internet.fr>
Message-ID: <7eoub6atp1@front7.grolier.fr>
Source record: 53387
Cross-posted to: comp.sys.sinclair,comp.sys.atari.8bit,comp.sys.amstrad.8bit,comp.sys.cbm

The only topic that is excluded (in this NG):
discussion of Amstrad PC-compatible (1512, 1640, 2x86, 3x86 and
others Amstrad compatible I don't know) because these computers
are really compatible, so comp.sys.ibm.pc.* newsgroups must be
used.

For questions about these computers see
http://web.ukonline.co.uk/cliff.lawson/index.htm

Well, this NG is not a PC newsgroup, but I can to help you :

L.F.Deans a crit dans le message <370fc353.14588474@news.freeserve.net>...
>Hi Folks
>I hope some of you can advise me please...

>I just picked up an old Amstrad PC1512 with a 650mb HD

650 mb HD ??? Is that possible on an old PC like this ??? my old PC1512 had
only 20mb HD !

>but no discs, I
>can't get the thing to boot up although it does check the floppy drive
>and the hard drive in the process. The only disc I do have that I can

You would probably get a larger responce from newsgroups specialising in
embedded control - as the old 6502 is used in many 'hidden' applications.

Its funny though on the Origin Website talking about the history of the Ultima collection that the Atari version aren't mentioned. C64, Amiga, Apple and IBM are the only platforms mentioned for release of the Ultima products.

The Ultima I is a re-release. The original was just called
"Ultima", was from California Pacific Computers, and was for the Apple][
only.

As it is, it _is_ a rare version. Care to sell it or auction it
off? :)

3525. FS/T: Atari 8-bit computer items [04/12/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-12 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <371c070b.669860@news.nls.net>
Source record: 53244

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 04/05/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}

$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 3.00 3-D Tic-Tac-Toe
$ 3.00 Alphabet Zoo [Spinnaker] -- no label
$ 3.00 Atariwriter
$ 3.00 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede
$ 3.00 Dig Dug
$ 3.00 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 5.00 Gateway to Apshai [Epyx]
$ 1.25 Missile Command
$ 2.50 Pac-Man
$ 3.00 Qix
$ 1.25 Space Invaders
$ 2.50 Star Raiders
$ 2.50 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 4.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

I've played several PSX games and they SUCK! I love the old classics.
Ballblazer, Bounty Bob, MULE and you can just imagine how many others.
8-bits are still more fun (You know as opposed to better graphics and sucky
gameplay)

(People had negative experience with BBCS.)
I purchased it from Antic. My experience was it didn't work,
also. I've said this before and someone said he/she used it
and it worked very well for them. I'm glad to see other people

didn't have success with it. It was so bad, I used the disks
for something else. Don't even still have a copy of it.

(About BBCS)
I had BBSes for years. I started with AMIS MPP by Matt Pritchard.
AMIS MPP was very good, until 1200 baud modems started (MPP was
approximately 300 baud, it was somewhat incompatible (the MPP
modem) with the Atari 1030, so you had to set your baud rate
at login.
Then I got BBS Express by Keith Ledbetter, in my opinion, the
most solid, best BBS software made until now (I never had BBS
Express Pro, which I would guess is equally solid.)
I tried BBCS, no good. I tried Carina (an early version), it
wasn't very solid, lockup/crash about every other day. Carina
was interesting because you could customize it to your tastes,
using regular Atari BASIC. I understand Carina is still sold
and supported and may be more solid today, but I'd recommend
BBS Express Pro for anyone trying a BBS today. Tom Hunt is
still working for Video 61, Lance Ringquist, updating and
maintaining Express Pro.
Never tried Forem.
The moral, get BBS Express Pro from Video 61 if you want
the latest best BBS software for the A8 (IMO).

"Arcade2000" <Jeff_Kemper@email.msn.com> asked:

<<What is an Atari 400/800 computer Jr. Pac-man Cartridge (never released, beta prototype) worth? >>

These can be ordered for $20 from a number of places including Best Electronics and B&C Computer Visions. They're not really that rare since a number of these companies have been burning their own copies. What kind of label is on the copy you're talking about?

A really nice one. I only saw it for about 3 minutes, but it didn't look
homebrew. As for the companies burning their own copies, is it legal?

If the label was like a bright orange, it's probably from B&C. If it was a black & white text/picture label, it's probably from Best. Either way, if it had a nice-looking label it's probably not a true Prototype. I'm not sure if the burned copies are legal or not, (probably not) but it's a common practice. It also makes getting these games a whole lot easier and it's nice to have them on a cart as opposed to a disk, or an emulator file. I have quite a few of these burned proto games from Best, and they're very nice. Here's a few that I got from them, all about $15 - $20 each:

Animated Puzzle
Berzerk (Very Nice, with SPEECH even!)
Jr. Pac-Man (Nice scrolling Pac-Man variant)
Kangaroo (Very nice but only works on 400/800...not XE/XL)
Stargate (Kind of choppy...Defender is better.)
Super Pac-Man (Really Nice! Love this one!)
Superman III (Not sure how to play this really. Kind of confusing. May not be complete.)

B&C's site is:

http://www.myatari.com

Best's site is:

http://www.best-electronics-ca.com

Best's site is relatively new and doesn't really show even 10% of the stuff that they have. You're better off calling them on the phone at:

(408) 243-6950

Hope this helps. Later. :)

Hi,

get yourself some cooling spray, open your XL/XE and when the screen
starts to do weird things cool down the chips.

Only one at a time!

Start with ANTIC -> Refresh
Next maybe FREDDY or TTL MUX chips -> Timing
CPU -> Phi2 to Phi0 delay
RAMs .. and so on.

When the screen goes better upon an icy chip, you found the BUG.

>
> Thanks for the help-
> Paul

For most commercial games, remove BASIC cartridge and turn machine on,
while holding START button. You'll hear a beep, press PLAY on tape recorder
and ENTER on the Atari 800.

If it's BASIC programs, start machine with BASIC and type CLOAD. Beep again
and press play and ENTER.

This works for most, but there are a couple who needs BASIC, but boots with
START too.

Good luck

Hehe... you've hit the nail on the head.

You see, we are reaching INTERNET Atarians, and though there are many, I believe it covers (I would guess) one eighth to one tenth the Atari using population.

Let's put our heads together and try to understand both the Atarians off and on the internet.

ATARIANS ON THE INTERNET

1) Most are not on the Internet via an Atari computer. This is true for 8-bit users especially. Most surf and download with a PC or Macintosh.
2) Those that do use internet browsers are slowly growing in numbers, but since this is not a native idea for the Atari, it is rare nonetheless.
3) Atarians on the internet by the above means was counted at roughly 600 in an operating systmem poll, and that was just the people that were aware of it. I would venture to say that the active crowd of Atarians some how involved with the internet would actually number somewhere in.. ??? would I be optismistic to say somewhere near 10,000? (considering 8-bit, 2600, Lynx, Jaguar, and ST.) ST users I think would number in the 2000-3000 range.

(I'm throwing out an estimation.. which invites challenges for other numbers higher or lower. I welcome the input.)

ATARIANS OFF THE INTERNET

1) People who use them for specific applications (word processors, Midi, graphics). To them, the idea of using an Atari for the internet is about as alien as using an etch-a-sketch for faxing.
2) Closet Atarians... those who like them, and keep the machine in storage for one day when they will revisit the old "outdated" computer.
3) The die hard Atarian... they are alone in a world without Atari, long after the others have left.
4) The poor Atarian... they are still using Atari because they can't afford another machine.
5) BBS ranger... still plugging away at the BBS's... since internet is out of reach for an ST and too strange to try.
6) Atarian with phobia... afriad to try the internet.

(Please submit other examples here)

Problem:

The Atari computer was released long for the dawn of the internet era, thus making the means for surfing for Atarians on the internet somehwat null and void. This is perhaps the greatest challenge in finding Atarians today... finding other media in which to locate those isolated souls unaware of an active Atari community, resellers, vendors, and developers.
Till Novmeber 1998, I was one of those people. I stumbled into an Atari user group.

So, here are some means to get the word out that I've come up with so far.

1) e-bay... people buy and sell Atari equipment there all the time from around the world. There you can see vendor and buyer addresses. It is possible that the people buying have a love for the computers, and would love to hear of an existing community. But I'm sure there are many there that buy the equipment for it's nostalgia, being sure that nothing is being done with the equipment.
Auctions of similar nature might prove useful.

2) BBS's... off the internet, still striving in their own right, many members are off the internet entirely. Many call long distance to log on.

3) Old user club listings. Got a club, or had a local club in the area? See if you can find a list of old Atarians. Given them a call, let them know what's going on. The number might be changed, the person might not be interested in Atari at all. But I will say too that with reestablishing contacts I've brought back quite a few Atarians who didn't know anything was still going on!

4) Flyers... at universities, computer stores, and anywhere that will accept a flyer. Also consider placing flyers at sci-fi conventions, computer shows, and shows involving gadgetry.

5) Computer shows... display a Atari computer! That'll shake some of the people up! Hand out flyers

6) Where Atari clothing when walking around for the fun of it. You'll be amazed how many people will stop you to ask you about the Atari and talk about the 2600!

7) Sci-fi conventions.. have to be a great source of computer geeks. Computer geeks run in two categories... ultimate gadgetry or ecclectic gadgetry. Chances are, you will find Atarians in that crowd.

8) Newspaper.. reaches tens of thousands. An add will probably be see by quite a few if you put out an add. If you an get the newspaper to do a story about your club, probably even more so.

9) Comic book stores.... see sci-fi conventions.

10) Radio... get the local public radio station to advertise some special event, such as an Atari show case or computer show being held free for the community.

11) Television (Public Access) Really bold and just brainstorming, but many public access channels allow free time to local interests, and will usally supply equipment for filming. Only problem... usually tends to be a city by city basis.

Those are my ideas for a start.. and let's not forget the best way to bring in Atari users...

12) through contacts of associates and friends. :)

They've sure been around a long time.
Pretty sure (correct me if I'm wrong) but I believe the newer Atari 2600
(under 50 bucks???) were assembled until the end of the 1980's. You could
still find them for closeout sales for quite awhile after that (I could kick
myself for not going to my local Big Lots when they advertised back in 1993
Atari 2600's brand new in box for $20 each).

<<You could
still find them for closeout sales for quite awhile after that (I could kick myself for not going to my local Big Lots when they advertised back in 1993 Atari 2600's brand new in box for $20 each). >>

Yup. Around 1990, Job-Lot Pushcart Company in NYC was selling the systems for $20 each and every cart (including now RARE titles) for 50 cents each. I remember seeing 3rd party carts like Riddle Of The Sphinx, Keystone Kapers and Space Chase, all brand new for 50 cents. If I only knew then what I know now...

Action! syntax is very similar to BASIC, in both language and form (minus line numbers). The only difference is that the statements are actually function calls.

ie.

SOUND(argument1,argument2,argument3,argument4)
PRINT(textstring)

etc etc

- Don

> How many colors has the 2600?
> Is it 256?

The 2600 has 128 colours. The Atari 8 bit computers and the 5200 have 128 colours in all modes except one, where they have 256 colours. The 7800 has 256 colours.

> How high is the resolution?
> Is it 320*200?

The background (playfield) resolution is 40*240 (or however many lines you can fit into an NTSC screen). The sprite resolution is 160*240 I believe.

here is a list of all the new carts we have released n the last 2
years,all carts come in a box,with documentation,except sparta
dos3.3c,we are currently working on doc's,all carts run directly from
the cart port except the 3 utility carts,they are installed,then taken
out,we currently are working on more titles,and we will post them when
we are able to,all titles carry a $19.95 a peice price,
mydos xl/xe only,this is the newest version,and has some improvements
sparta dos 3.3c xl/xe only,this is the most solid sparta yet
translator cart xl/xe only,now you can have fast boot of your
incompatible 400/800 programs,no more wait time for translator disk boot
up,this aso works on many carts
amazemaze 48k,maze craze type game
hearts 48k,based on the popular card game
montana solitaire 64k,nice solitiare type puzzle game
checkers 16k,nice checkers game
jailbreak 64k,2-4 player arcade style game
ricochet 64k,paddles requirerd in this breakout style game
sharp shoooter 64k,light gun shooting game
my jong 64k,chinese puzzle style game
paddle wars 48k,pong style game
bumpers 48k,fast breakout style game
lights out 48k,1-2 player puzzle game
puzzler 48k,20 dungeons of puzzle fun
paddle pack 48k,two pong games on one cart
puzzled 48k,jigsaw puzzle fun
twin pack 48k,two games on one cart,battle ship/jump the pegs
solitaire 48k,real good version of solitaire,nice and addicting
video slots 48k,nice video slot machine good graphics
desmonds dungeons 16k,good platform style game
dungeonlords 48k,like dark chambers,or gauntlet
maze war 16k,fast fun 1-4 player game(4player 400/800 only)
dan strikes back 16k,good platform style game
elevator man 16k, donkey kong style game
plaqueman 16k,pacman maze style game

>Does anyone knows what is the latest information on connecting
>a PC Keyboard to the atari 8 bit computer and where i can find such
>info?

look at: http://www.macfalkner.de

for the AKI Atari Keyboard Interface.

Theres a new bugfixed software (V1.1A) for the AKI available since Nov 1998.

In Feb 1999 i have added a new board layout. Theres no more soldering necessary
on the POKEY (if your POKEY is socketed !). This time the new layout is only
available in the german doc, i hope i have the english one complete soon.

bye, MacFalkner

3563. SCRAM!

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-13 00:00:00 UTC
From: louis@vegas.infi.net
Message-ID: <louis-1304990029270001@pm1-53.vegas.infi.net>
Source record: 53266

I remember in the early days of Atari Computer there was a game called 'SCRAM' which was a necular power plant simulation. I only seen this program demoed on television shows like 'Livewire' (Origional show from the early days of Nickelodeon), but I never seen it in the stores, or none of my friends had a copy. The closest anyone I heard of getting close to the software is obtaining the software instruction manual. Does anyone know of where to obtain a copy of this program?

Thanks,
Louis Di Fazio

That port is RF out. You can connect it to the antenna or cable input of a
TV, using adapters from Radio Shack. You would get a better picture with
a monitor cable connected to audio/video inputs.

Net-Tamer V 1.08X - Test Drive

But remember that BobTerm can only tell the size of a file when running under SpartaDOS and the file is actually on a SpartaDOS disk.So if you upload a file under other DOSes BobTerm won't know the size of the file and will simply omit this information.Which that their will be extra bytes added on to the file since the downloader won't know where the file stops.

>Write your own TurboBasic program to read/write mail.

Or use TextPro to write mail and COL80 (from Ice-T) to read.

It is not the speed that is the problem but the timing. bit banging at those high speeds require precise timing. When my predicesser desinged Supermax, he had the high speed timing very close but not quite right. He tried adding and deleting NOP instructions but could not get it right. He then looked at the USD timing and found he was 1 machine cycle out in the 1050. The minium number of machine cycles for an instruction on the 6502 is 2 cycles. so a different combation of instructions to achive the same goal was used. tricky stuff.
Indus gt highspeed works great for my PAL system tho it was designed on NTSC systems. Indus highspeed is somwhere near 80000 baud.
Another timing problem occured in the first XF551's that landed here (Australia). Atari quickly fixed that by putting a slightly longer delay in the send/recieve code for the 8040 in the XF. This new rom should work equally well on NTSC systems. CSS had the same problems with the XF code till I sent him the patch for the original rom and he quickly came up with a new version his XF products. Again, this new rom workes on both PAL and NTSC systems.

James

> I suppose fixing it in the offensive drive was easier.

Yes but there is a window of speed that will work, something like .5%
either side (not sure on this figure) that will work fine. step out
side that window and things play up. I did once have the speed
difference between NTSC and PAL. NTSC is something like 1.789772 Mhz
and PAL is 1.773447 Mhz. Not much I know but enough to cause problems
for programmers of I/O devices when divided down to the sio speeds.
1050 will not be affected much but the xf processor runs at something
like 8Mhz and is has mostly 1 cycle instructions. Large problem there.

Message-ID: <7f0030blo1@nnrp1.dejanews.com>
Source record: 53285

Hi, I'm selling the following stuff on Ebay right now:

Atari 800

Atari 1020 color printer, new, unopened in box

and some non-8bit stuff you might be interested in:

1040 st complete system, with sm124 monitor, sf354 disk drive, mouse, cables and a bunch of software

5200 game system with 2 controllers and 5 games

Adversary game system (National Semiconductor) in box

S Four Thousand game system (made by Kmart)

2 semi-working Super Pongs (1 Atari, 1 Sears) - both turn on, and both have weird problems of their own.

plus some assorted games for various systems, all in original packaging:

Dr. J/Larry Bird Go One On One (IBM) still sealed

Gauntlet (IBM)

Wasteland (Apple II)

Bard's Tale 1 (Apple II)

Ultima Online (pc) with 2 strategy guides

Sid Meier's Alpha Centauri (pc)

OK, I think that's it for now! Thanks for looking.

use this link:

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&userid=alankay

(you might have to cut and paste the whole thing, sometimes whatever is after the "&" isn't part of the link)

or you can go here:

http://pages.ebay.com/aw/search.html

and in the "seller search" box type in

alankay

Thanks!

Alan

echlo

i'd like to invite all of you to atari8-l mailing list.

it's probably the biggest atari 8 bit related mailing list in the world -
- connected bidirectionally to old list at MARIST, and gatewayed to the
FidoNet(tm) international ATARI8-L echo.

for now it has about a 100 subscribers, from all around the world. the list
is free from all the F/S messages, and other off-topic discussions, so
you can find there pure atari8 related stuff... all the messages comes right
to your email account, so there is no need to contact a newsserver, there
is no old-messages deleting, and so on... my wish is that every atari user
would be subscribed, so the atari community stay together and grow in
strenght.

if you maintain an atari8 related WWW site, please put some informations
about the list on it - i'll help others - not everyone has access to
usenet.

to subscribe, please send the message to majordomo@zwieracz.ideefixe.nom.pl
with the following line in the body (not the subject) of your message:

subscribe atari8-l

the language we use is, of course, english. the list is fast, reliable,
regularily maintained.

please, share this message with all people that are interested in atari8
topics you know, and help make this mailing list wide known.

Message-ID: <19990413233740.17907.00000378@ng08.aol.com>
Source record: 53204

Hi-
I recently was fortunate enough to acquire a
very nice ATR 8000 (16K version). There is
some documentation that mentions a hard
disk interface, but nothing in great detail.
Upon opening the ATR, there is a daughter
board with a 50-pin scsi-type header.
Anybody know something about this?
Likewise, does anyone know if anyone has
ever got these running at more than 19K to
the drives? Looks like 3-1/2" drives would be
no big deal at all, but I've never heard anyone
talk about higher comm rates on these or
the Percom. (?)

>Anybody has a list of common Atari file formats?

I have never seen such a list, but there is
at least one Basic program that tells you
what kind of file a given filename has.
It is called "DETECT2.BAS" and has
an accompanying doc file. It is usually
found with Archivers.

It was written by Ray Goldman - the
Daisydots author, I believe.

> degenerated into confusion (and argument?) with no clear answers.

It's either mode 9 or mode 11 - I always get those two confused. It's a mode of the GTIA where you have one chrominance (hue) and can set the luminance to any of 16 values. Since the luminance values are in the bitmap, they don't suffer the 3 bit limitation of the colour registers. The resolution is 80x240 which makes it hard to work with.

> Also, do you know anything more about the 7800? What I've heard implies

> Display List). It sounds very impressive. I don't know if the encryption
> algorithm has been broken yet, though.

I'd very much like to know about the 7800, but the one person who really does know about it on the net is in a huff about no-one buying his monitor program, and won't talk about it anymore. If only he would make it freely available - it would save a lot of duplicated effort!

The encryption should be easy to break as you can disassemble the ROM and see what it's doing on powerup. However, since any development 7800s will be fairly hacked units anyway, you might as well just replace that ROM with one of your own and forget about it. Here in the UK, 7800s don't have encryption anyway, due to US export laws.

For a while I enthused about programming the 7800, even taking apart a Ballblazer cartridge with the POKEY chip extension, so that it might be possible to connect a keyboard and SIO bus peripherals from the 400/800 computer series. But I got sidetracked when the lack of information became apparent.

If you *are* interested in programming the 7800, try adapting Atari BASIC from the computers to work with the 7800's operating system, and find one of those Ballblazer cartridges so you can add a keyboard and maybe disk drives. I'd be interested to hear the outcome :)

> a nice machine even simpler than the Atom, but nothing else...
....

Microtan looks like a cute idea.

Writing a program for it could be fun; but, at present, the emulator
mentioned at http://oric.ifrance.com/oric/microtan/microtan2000.html does not
seem to be available. You get a 'Document does not exist' message when you
click on the emu link.

The Atari Disk Operating System II Manual is quoted as follows:

"SYS system files
BAS BASIC program files
DAT data files
MUS ATARI Music Composer files
ASM assembly language files
OBJ binary load files
SRC source files
LST files created by the LIST command
SVE files created by the SAVE command"

hope this helps...

From what I have heard, they don't use a serial chip for the Atari serial cable, just plain bit banging. I don't know what a 2 mHz Z80 can do, but I would imagine it could do a bit better then 19.2k. I know zilch about Z80 programming, so I never bothered trying to get the thing to run faster.

As far as drives go, mine currently has 4 [720 3.5", 720 5.25", 720/360 switch able 5.25", 360k 5.25"].

The system works fine in its native mode, but if I try to switch the disks into something like a XF551 with 80 track drives I get problems with formats. Not sure, maybe ATR using both sides of a disk for a double sided drive right from the first write where as the XF fills up one side first.

They are kind of cute in some respects, for instance if you do a read on an IBM disk it will error out but still return all 512 bytes in the sector to you. But they are a bit slow, if I use anything now, it is mostly sio2pc.

Hi Richard,

>I'd very much like to know about the 7800, but the one person who really
>does know about it on the net is in a huff....

Who's that then?

>The encryption should be easy to break as you can disassemble
>the ROM and see what it's doing on powerup.....

My thoughts exactly. I've been doing that myself but recently became side tracked disassembling the 5200 ROM....I'm hoping to get back the the 7800 ROM soonish. From what I've done so far it looks like it's not exactly going to be a picnic.

>....However, since any development 7800s will be fairly hacked units
>anyway....

Early development 7800s were standard (NTSC) units with the standard ROM replaced with one which would talk to a host system (usually an ST) via the joystick ports and would support a banked RAM cart - into which your game was downloaded.

Later units were 100% standard 7800s with a different RAM cart which connected directly to the host system (rather than via the joyports).

Can't comment on PAL development systems as I never used one, I assume they're the same as the later NTSC ones.

>....you might as well just replace that ROM with one of your
>own and forget about it.

This was my thought. However from chatting with people on the Stella list it would seem that most NTSC units had the ROM soldered in. :-(

>For a while I enthused about programming the 7800....

It's great fun, one of the nicest systems I've ever used.

>If you *are* interested in programming the 7800, try adapting
>Atari BASIC from the computers to work with the 7800's
>operating system....

There's little chance of that being possible. The 7800s architecture is COMPLETELY different from that of the 8-bit computers and it doesn't contain an operating system - the ROM simply checks the cartridge encryption and switches the unit to run in 7800 or 2600 mode appropriately. It then switches itself out and runs the cartridge, all your program sees is a clean system with NO ROM at all.

That said, I don't see why it shouldn't be possible (with a LOT of work) to get the 8-bit OS to run on the machine. You might then be able to get BASIC etc running, but you'd have to add a lot of hardware (RAM etc) and there'd still be ZERO chance of getting any games to run.

The 5200 OTOH is another matter....

TTFN - Pete.

An Atari 7800 emulator was being added to the multisystem emulator called MESS, last I knew they had pole position working somewhat. Perhaps the authors will put together some documentation.

http://atarihq.com/danb/files/7800bios.asm

It needs more commenting... :)

The sites I have found on 7800 development are:

http://atarihq.com/danb/78tech.htm

http://members.aol.com/jpsoftco/7800.htm

> >....However, since any development 7800s will be fairly hacked units
> >anyway....

> was downloaded.

I meant a homemade development system - just a standard 7800 that you'd
replace the ROM inside with one of your own.

> >....you might as well just replace that ROM with one of your
> >own and forget about it.
>
> This was my thought. However from chatting with people on the Stella list it

All PAL units I've seen have had socketed ROMs, but since when was
desoldering a ROM a problem? ;)

That's neat, I like that - who wants to be tied to someone's OS?
Especially if it's not a particularly good OS... :)

> That said, I don't see why it shouldn't be possible (with a LOT of work) to
> get the 8-bit OS to run on the machine. You might then be able to get BASIC

> still be ZERO chance of getting any games to run.

You'd need to hack the OS to use the 7800's hardware - I'm assuming that
you'd use a POKEY cartridge to get the keyboard and SIO support, though I
don't know where those carts bank POKEY in. Then Atari BASIC ought to run
without any modifications, unless the presence of the TIA in zero page
messes things up.

> The 5200 OTOH is another matter....

The 5200 is just an Atari 8 bit computer really. Why reinvent the wheel?
:)

I am working on some stuff that is related to Atari Cassette units.
Carl Evans wrote a series of articles in the Antic magazine about
this topic. He also wrote some books. I would like to get in
touch with him. Does anyone know his E-mail address?

Keep those cassette units buzzing.

Message-ID: <3715109A.EF44EB32@postoffice.pacbell.net>
Source record: 53221

About 10 years ago, I was playing a few Atari games which i really want to find and play again. I think it was Atari 130/800 XE, but instead of cartridges, the games would load from a cassete tape. Where would i find this system? Would I be getting the same thing if I got Atari 130 XE with a disk drive? The games I played were (I think) : Robo (small robot collects bolts to complete his spaceship), Monti (Mario type game with skulls rolling on the floor), Diamond Run (or Boulder Dash, my favorite, collect diamonds underground). If anyone has any info on this subject, or knows where to buy that system, please help.

Thanks,

Andrey

TJ Edmister writes ...
>
> What is this contest about? I missed the original post.

It is a contest for the best 6502 code and BASIC programs written for a
little hand-held 6502-based computer called a "Microtran".

Here is the info from the original 25 March 1999 posting from Fabrice
Frances ...

....

>>

Hello 6502 lovers, I'm pleased to pre-announce a
6502 programming contest in the spirit of the 80's.

Do you remember when programs were optimized
to fit in available memory ? Here is your chance to
feel again the atmosphere of this golden age:

THE 1KB MICROTAN PROGRAMMING CONTEST

Huh ? What's this Microtan thingy ?
Imagine a small 6502 system with 1KB ram and 1KB rom,
with discrete logics driving a video output, very few I/O ports,
and you are done. Tangerine's Microtan65 can be seen as
the 6502 version of Sinclair's ZX80...

So, with 1KB of ram (half of it being used as video memory),
will you dare writing THE incredible program ?

The programming contest rules can be read on the
Microtan65 page of http://oric.ifrance.com
along with a cycle-based emulator.

6502 programmers of all platforms (Atari, Acorn, Commodore,
Apple, Oric, etc) : please enter the hall of fame of 6502
programming and sign in this competition which will allow
all 6502 programmers to meet !!

Also, if you are not a programmer but still interested in
the programs your friends will write, you can postulate
for the international jury that will evaluate the programs !

Best regards to all,

Fabrice

<<

The contest info page (in English) is at ...
http://oric.ifrance.com/oric/microtan/microtan2000.html .

The prize is a Microtran (which, according to the contest info page, costs about $115 US). There are supposed to be emulators for several machines (including PC and Mac) upon which you can develop your code.

The emulator info page is (in French) at ...
http://oric.ifrance.com/oric/emulateur.html

For now, at least some of emulators do not seem to be available for downloading. Just clicking on the "microtan emulator package" link near the bottom of the contest info page led to a 'Document does not exist' message. A right-click gives you a chance to download a .zip file; but, the last time I tried, it downloaded very slowly and turned out to be corrupted.

Good point!

If the emus needed to do the programming for the contest are not available
in a week or so, we could shoot the emu programmers with a spit wad using a
rubberband.

> kind of graphic power.

My dear fellow, the _colour_palettes_ of the 8 bit machines are exactly as described. They are generated in a very simple way, using a 3 or 4 bit luminance control (8 or 16 luminances) and a 4 bit chrominance control (16 chrominances or 15 in PAL because one is duplicated). The hardware to do this is *much* simpler than generating RGB and encoding it to composite; the colours it produces vary somewhat in saturation depending on the hue, but it's good enough for Atari, Commodore and Nintendo (and maybe a few others) to get away with using systems like this in their 8 bit machines.

The problem with the Ataris is that the number of colours you can display on the screen *at*once* is very limited - the 8 bit computers and the 5200 only have 9 colour registers and the 2600 even less. This can be got round using display list interrupts on the computers or a clever display kernal on the VCS, but many games (especially the early ones) don't do this.

It is an inescapable fact than the Atari VCS had more colours in its palette than the NES or Sega Master Systems that were to replace it, let alone the high-powered IBM PC XT / AT systems or the Apple IIs.

I speculate that is what Atari used for the extra chip select signal (or a high low address signal for a bigger EPROM) for selection between BASIC and Missile Command.

I don't have a XEGS in my possesion to verify this though.

>A good disassembly/debugging environment can be found in MAE
>(Macro Assembler Editor) by John Harris (no, I don't know exactly
>where to find it).

You can find it in the UMICH Atari Archive. Go to the following address
and search through the subdirectories:

http://www.umich.edu/~archive/atari/8bit/

I just visited there are found it at the following address:

http://www.umich.edu/~archive/atari/8bit/Languages/Assembly/

Below is a listing of the directory for MAE:

mae11.arc 04-Jul-1997 21:34 73k
mae11.blurb 04-Jul-1997 21:34 1k
mae951.blurb 10-May-1995 19:48 1k
mae951.ps 10-May-1995 19:48 138k
mae96.arc 21-Jul-1995 04:05 66k
mae96.blurb 21-Jul-1995 04:12 1k
mae_95.arc 02-May-1995 20:14 49k
mae_95.blurb 06-Oct-1997 03:48 1k
mae_95.txt 02-May-1995 20:15 7k

The blurb files are discriptions of the files. The ARC files are the actual
compressed files for the program. The PS file is a post script print file
of the manual. MAE is probably the best freeware assembler you will
ever find for the 8bit. John Harris has done a great job of bringing the
assembler he used while writing 8bit games at Sierra On-line to us 8bitters
who still enjoy programming on our machines.

Enjoy,
Glenn Bruner

But what?

Gimme the docs, I'll format them somewhat and put them on my web page,
no problem.

Bill......THATS IT !!! That's the game, I didn't know the title. So you don't need to have a cassete tape drive to play the game? What do I need then? What's the best system to play that game on? Do they make that game on cart as well? If so, is it any better then the disk version?

Thank you VERY much,

Andrey

I have seen a lot of types of Diamond Run games. All of them had a human character collection diamonds, and that's not it. The one I'm looking for has a diamond shaped robot. In some parts of the game, the diamonds turn into water or liquid stuff. Anyone know the name of the game? And what's the best version of the game (tape , cart , or disk)?

Thank you all.

Andrey

Also, about 'Robo' game. A little robot collects bolts for his spaceship. There are a lot of puzzles, killer magnets which have to be blocked by some object before you can pass, and evil 'eyes' that hunt you down. I thought it was called ROBO, but I can't seem to find that game anywhere, is it what's it called? And do you have a copy of it for sale?

Thank you all,

Andrey

Hi,

right, that's ROBBO by L.K.Avalon.
Great logic game.

I have a few of them but just on cassette tapes. (i think more than 10 continuances was released, Robbo 2,3, Super Robbo, The Warsaw Robbo etc.... I have any of them in my collection) Also Robbomaniacs club exist in Czech Republic, they released Robbo 97 and Robbo 98 in last 2 years yet.....

First, always visit XL-Search: http://www.newbreedsoftware.com/xlsearch/
Enter Robbo - you'll get at least 10 files.

Here are few mods: http://www.jrc.cz/atari/robbo98.zip

Robbo is also here: ftp://matrix.ibb.waw.pl/pub/a8/Games-files/r/
And here:
ftp://ksk.novastor.com/pub/Atari/CTH/Atari_8bit/More_Atari8bit/Games/FILES/R/

Last-modified: April 2, 1999

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

Yes indeed!

After a lengthy hiatus, the newsgroup comp.sys.atari.announce is
back. I have taken over as moderator, and just approved a posting, the
group's first in years.

I plan to update the group's charter, and will work with the Atari/Usenet
community to make the newsgroup as useful as it can be. c.s.a.a will be a
low-volume newsgroup offering news about Atari software, hardware, Web
sites, and other information relevant to Atari users. Articles may be
related to Atari 8-bit, ST, Portfolio, and PC clones.

I would appreciate your help in getting the word out about
comp.sys.atari.announce -- after such a long lull, I'm sure many
Atari-loving newsgroup readers have forgotten about this newsgroup. Of
course, I also invite folks to post any Atari-related announcements to the
group.

Hiya Bob! Long time, no hear! How are the files archived on the disk? In .ATR or are they "BBS ready" in .ARC and DCM formats? Most preceeding CD's produced are in .ATR formats to cater to those using emulators with no regards to people using "real" Ataries.

JC! :^)

Hi, I'm looking for 800XE system. Prefferably with all the necessary cables ready to go. Preffer in like-new condition. Also, if you have a disk and tape drive for the system, I'll get them too. Games are a plus. (Particularly looking for Robbo, Boulder Dash, and Montezuma's Revenge.) I'm in California.

Thanks

Andrey

Yes the XEGS uses a 256k ROM to hold the OS, BASIC, and Missile Command. The
high address lines are used in combination with the CS/OE to select
which rom appears on the bus.

I think I worked out the XEGS MMU at one time, I will find my notes and post
the pinout.

Hi Richard,

>Hi Peter. How's the SGI?

Didn't realise you were into Atari stuff too.

I'm working on the SGI, hope to have it up and running soon - got just about all the info I need, though I'm still missing a kbd and mouse (working on that though.... :-)).

>I can't remember - it was a while ago... I did receive a reply from him
>though, so maybe if I search through all my mail...

The reason I ask is that you mentioned he'd produced a monitor cartridge for the 7800. There was some chat on one of the mailing lists I subscribe to about him as he MAY know how to defeat or get around the 7800's encryption - something I'm VERY curious about.

>It needs more commenting... :)

Aha, I didn't realise Dan had put it up on his web page. I'll have a look and see how mine compares with his.

>I meant a homemade development system - just a standard 7800
>that you'd replace the ROM inside with one of your own.

Ah, sorry. That's an entirely different kettle of fish.

>That's neat, I like that - who wants to be tied to someone's OS?
>Especially if it's not a particularly good OS... :)

Heh, heh. It's amazing how liberating it is when you don't have to work inside the confines of an OS - then again the 8-bit OS is also one of the nicest I've come across. True it has a few faults, but nothing major.

>You'd need to hack the OS to use the 7800's hardware....

Yes, it would be a fairly big job. But from what I recall of the OS the main bulk of changes would probably be required in the "E:" handler (a BIG job), the majority of the rest of it should be very straightforward. Hmm....

>....I'm assuming that you'd use a POKEY cartridge to get the
>keyboard and SIO support, though I don't know where those
>carts bank POKEY in....

Yes, you'd need more RAM too - the 7800 has very little as standard. Not a problem for games, but....

I'd like to know how/where they mapped POKEY in, I've never seen any
documentation of this.

>....Then Atari BASIC ought to run without any modifications,
>unless the presence of the TIA in zero page messes things up.

Hmmm, I'm no expert on Atari BASIC I'm afraid. I only used it briefly (a week
or two) before I moved on to using the ASm/Ed cart....then Mac65 and Action!
when they appeared.

I've got the BASIC sourcebook(?) somewhere, that would give the definitive
answer I'm sure.

>The 5200 is just an Atari 8 bit computer really. Why reinvent the wheel?

Yes, but it's just different enough to make it interesting....I'd love to get
hold of one but they seem impossible to get over here. :-(

TTFN - Pete.

> rubberband.

I suppose that we'll be shooting them all, then; the emus probably won't have
been programmed due to the programmers having given up because said emus have
been attacking the programmers and eating various items belonging to them.
We'll have to watch for them eating the elastic bands too...

;-)

Oh they do not, and you should know it! There is a friggin' grayscale mode
with 16 shades at about 80 x 192. Then you can have 16 colors at 80 x 192.
Then all the lesser modes with LESS colors than 16, and LESS resolution.
Then there is a TWO colour mode at 320 x 192.

vs

To email me just remove the X's and underline marks from my address.

>board with a 50-pin scsi-type header.
>Anybody know something about this?

I had own a ATR8000 years ago that was loaded with
the following stuff:

Standard ATR8000, 64k ram
Co-Power 88 (128k RAM IBM PC XT with 8088 processor)
SASI hard drive interface

That daughter board you have in the machine is a SASI
interface (Shugart Associates System Interface). The
interface standard that SCSI was born from. I know of only
one DOS for the Atari that had a driver to support that interface,
MYDOS. I don't remember the exact version, but I used to have
a copy of it that had the ATR8000 hard drive interface driver.
If you can find that and a SASI capable drive, you could get it
working.

Since SASI is much older that SCSI, you probably won't find
any drives with SASI embedded controllers on them. You will
have to use what is called a "Bridge Controller." This will adapt
the signals between the SASI bus and a MFM hard drive bus,
plus provide command interpretation for the drive. One of the more
popular ones were made by a company called XEBEC. Computer
Software Services (CSS), which has changed names but I can't
remember, sold them. See if you can reach Bob Puff on that issue.

If you are really serious about using a hard drive on a 8bit, your
time and money is better spent on a Black Box. It connects through
the parallel bus and provides the some of the same features as the
ATR8000, except for the CPM stuff.

>Likewise, does anyone know if anyone has
>ever got these running at more than 19K to
>the drives? Looks like 3-1/2" drives would be
>no big deal at all, but I've never heard anyone
>talk about higher comm rates on these or

>the Percom. (?)

Unless you want to hack the Z80 BIOS code in the ATR8000 to
support US Doubler rates? I've never heard of anyone trying. The Z80
running at 2MHz should easily be able to do it. After all, a lonely 6507
is doing it in a 1050. But then again, I may be wrong if the circuitry
in the ATR8000 may be wired in a way to not support it?

From: dcaputi@worldnet.att.net
Message-ID: <7f880khgg1@nnrp1.dejanews.com>
Source record: 53089

I'm trying to use the APE/ProSystem (v1.17) to archive my old low density floppies.

I have an Atari 800 and 810 FD. I built both a ProSystem cable and APE cable. The APE cable works great. I can make working ATR images using APE via the DOS duplicate disk command. I had no luck making a simple ATR image of an unprotected disk using the ProSystem. It seems to create the image OK, but when I try to use it from APE, the Atari bootstraps and locks up with a corrupted display.

Has anyone done this with an 800 and an 810? Also, how can I tell if my 810 drive is "happy" modified? (maybe that's my problem).

Please also reply via e-mail to dan.caputi@reuters.com

No, the ATR 8000 writes side 1 first, from the outside to the inside,
than side 2 from the outside to the inside, just like a lot of other
drives.

As far as I know the XF551 is the only drive which writes side two
from the inside to the outside, which is the contrary of all others.

Does anyone have a link to a version of this isometic game
that'll work under a800win?

I have downloaded it from a Yogi mirror site but it crashes
upon loading. After examining the file it seems that the multi
part loading sizes arn't specified properly (it wants to load
blocks between $2A80 and $2C80 which it then moves
to where they should live?) Does anyone recognise this
method of packing programs? What were the common
compression techniques used by the crackers?

Back to the game, I remember playing it years ago on my XL
and found that, in the pause mode, you could press some keys
and a message 'A different kettle of fish' would appear. I thought
it may have been an apparent sub-game but nothing happened
after this screen. Does anyone know anything more about this?

Mark

If anyone wants to run a BBS program on the Atari 8-bit then purchase BBS Express! Professional from Video 61. He has at least 5 programers available to modify the program to your needs provided there is a genuine need for a change.

It is without a doubt the best BBS program available for any Atari 8-bit user, has ANSI graphics for the IBM user, networks with other boards, at a high speed rate, using Arc and Unarc for the transfer of files online.

I do not know Lance's price for the program but it is not outragious. And if you want a Professional BBS program for your board, then by all means please give Video 61 a chance.

Louis, I have a copy of the atr file on my website, with some screen shots. Go to www.geocities.com/BourbonStreet/1055 and it is on the main page. I also have the manual somewhere, but it is packed, and I am in the process of moving cross country, so it will be sometime in June or July before I have access to it again.

The BBCS did work V2.4 I ran it for over 1 year with no problems.. The documetation was flawed with tons of errors. What I did was just work around them.. I then Ran 850 express then moved over to Express PRO.

Andrey,

if you are from California, I think that you will have problems to find Atari 800 XE version there.
This ver. was produced especially for Czech, Slovak, German and Polish market. Not so rare there.... but in California ????

Better if you'll check for 800 XL or 130 XE (nothing bad on another 8-bit Atari types), but if you are starting with this system again, these can be most useful.

But... if you stay on this, to find 800 XE only, I can try to find any for you.

Dalibor

Not so much differences there.
simply it's 130XE without of 64kb more RAM, looks the same.
And (as this was marketed in Europe only) PAL.

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I
find it hard to keep up with NewsGroups.

I've been working hard on adding more Atari stock to my inventory. I
wanted to have everything in place by April 15th for those of you with
Tax refund checks. Still, I've done pretty well. And I'm expecting more
to show up and add more to my inventory. So keep checking my website at
either http://www.teleport.com/~bensmith/bscomputers.shtml or
http://www.atari.benjamin.net

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-
Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at
http://www.atari.benjamin.net And Jump to my FTP site linked to my Web
Site so you can Download Free Catalogs or FTP directly to my site at:
ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way,
Feel free to Request catalogs through E-Mail. Really, it's not an
inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both!
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail.
Please let me know if I can attach text files to your E-Mail. Catalogs
are just regular ASCII text files so you can download them into your
text editor and view them, edit them or print them out! It would make
things easier for me if you take my Catalogs, load them into your text
editor, delete what you don't want and E-Mail me the rest! To expedite
things, include your complete Mailing address so I can figure your
Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or
bensmith@teleport.com. If you can't reach me at benjamin.net see my
E-Mail/Web info in my Signature at the Bottom!

For anyone who wants them:

Linear Equations from CBS software
Dragon Mix - multiplication and division game with numbers 0 - 9 DLM
Alien Addition - addition with numbers 0 - 9 DLM Software
Alligator Mix - addition and subtration with numbers 0 -9 DLm
Chatterbee from Tronix talking spellchecker
Graphic Generator from Datasoft

All of these are for the Atari 400/800 systems. All are complete in
their original box. None have been used and none have been tested.
These are all diskettes.

All I want is shipping from NY,

Jack

Hi there,
Just wondering if anyone can point me to where to find schematics for a 256k mem expansion for 800XL's all I can seem to find are details on modifying existing setups.

also I have one sick 800xl, I've tested all it's socketed chips by trying them in a working 800xl, the problem it has is on power up is comes up with what looks like the self test screen, but the graphics are scrambled and there are no response to key press. It also does not check for boot disks.

Thanks in advance.

"BUT" only meaning "but there are others I don't have..."
For example, Advanced Music System files. THough I nearly got
the format (I had to since I wanted to do AMS<->MIDI conversion)

>Gimme the docs, I'll format them somewhat and put them on my web page,
>no problem.
>
>Jindroush <kubecj@asw.cz>
>See http://www.asw.cz/~kubecj

I'll look for them (don't remember if I have them on Atari or
PC disks). Then there are others which aren't in electronic media,
I would have to type them.
Then there are other formats that are not typically Atari,
but nothing hinders developing programs to support those formats
(for example, .WAV and .MID files - knowing the format, it's
perfectly possible to write a player for the Atari... How about
those? BMP and GIF too...

(Somebody says Pro-image .atr loads with corrupt display and
locks up.)
Could be something amiss with the Pro cable, I guess, but
that sounds a lot like what happens if you don't hold OPTION
on an XL/XE at boot for some boot disks. It is loading over
the display list because BASIC pushes the DL under $A000.
I dunno.

Don't pass this up, this is priceless and rare! This turns your
8-bit Atari into an ST, even uses ST mouse right in your 8-bit port!

Go to:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=92206530

for more info. Good luck!

3692. DGS Website - Summary of Contents

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-17 00:00:00 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <01be88bb$775d07c0$LocalHost@comgar-w95-001>
Source record: 53108

Over the past few weeks the DGS Atari 8-bit Website has been undergoing a few changes. This has included a slightly new interface and new stuff added. My ISP keeps giving me more and more free space whether I ask for it or not, and we're now up to 50Mb!! Therefore, I recently invested in a scanner and decided to scan old show photos, magazine covers, etc. I have already done some of this and the results are on the website now.

This is what we now have available on the website (and it it's all free of course!):

* Our main PD/Commercial software catalogue
* Latest list of used hardware/software/books/mags we have for sale
* List of PC CD-ROMs we have left which need clearing out
* Free demos of the Quick programming language and Digi-Studio to download
* 17 articles written by me and originally published in the Atari 8-bit News-Paper and Page 6 magazine
* Photos from the 1990 and 1992 AMS shows held in the UK
* Cover scans of the early Page 6 issues including the very rare Issue 1
* Cover scans of all 5 issues of Atari UK's I/O magazine from the early 80's, including the rare Issue 1
* Cover scans of the Official Show Guides to the Spring and Autumn 1987 'Atari User Shows'
* A scanned article from I/O magazine about how Atari got its name
* A cover scan of an old Silica Shop catalogue from 1987

More stuff will be added quite regularly, so make sure you come by from time-to-time.

The site now uses frames (only 2 to be exact!) so it may take a while to start up on some machines/browsers. Be patient!

Don't forget that DGS still support the Atari 8-bit with a wide range of PD and exclusive Commercial software. Full details are in the catalogue on the website.

All you need now is the address, which is: http://www.dgs.clara.net

Please stop by and take a look!

I have an Atari800XL with the printer. Does anyone know what the acutal pin specifications are for the printer port on the computer? I want to build an interface box so I might use the parallel port on my PC to print by converting it into a serial train of data to go to the Atari printer. It is time to use it as something other than a paperweight.

3697. Percom Drives

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-17 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990417105536.27722.00001835@ng-da1.aol.com>
Source record: 53113

What is the difference between
a single density Percom and
a DD version as regards its
hardware. I see that the SD
version has a daughter card
with a 1771A FDC. Does the
whole card have to be relaced,
or? Also, is there a different
ROM for the SD and DD
versions? I have a manual, but
it doesn't go into much detail.
Any sources of info on the web?

Did anyone see the article in the San Francisco Chronicle on 4/12? Page B2 had a 32 point article about some guy in New York who collects stuff about old Atari computers. This Curt Vendel fella even came out here to Sunnyvale and went dumpster diving at Atari headquarters! Can you imagine?

Noteworthy is not that such people exist, but that such an item would warrant as much space in a major newspaper. I had friends calling me about this.... are we missing something? Have you seen the prices that some of our old stuff goes for on ebay? There is one auction for a bunch of cartridges that is almost $100! These are just games and such - no ACTION or MAC65 types and no hardware.

What is the world coming to?

Bob

Nothing bad meant.

IIRC, somebody suggested a link to a site run by somebody named "Larry" in Florida that didn't work. He really wanted to get back to it because he liked it. I followed the the link and reported that it was OK. He didn't know which Larry it was, and I followed up and said it was you, and that I should have known it was you!

CLASSIC GAMING EXPO '99(tm) ANNOUNCES DISTINGUISHED GUESTS

AUGUST SHOW FAST BECOMING INDUSTRY PHENOMENON

April 15, 1999

VALLEY STREAM, NY -- Hot on the heals of an announcement by Hasbro Interactive to publish eleven Namco blockbuster classic video games including "Pac-Man" and "Galaga", the Classic Gaming Expo '99(tm) (CGE'99) promoters released a partial list of celebrities scheduled to attend the August event. In all, over thirty video game and computer pioneers have confirmed plans to actively participate, including industry legends such as Mr. Nolan Bushnell, founder of Atari, and Mr. Ralph Baer, father of the Magnavox Odyssey.

Among the many industry dignitaries that have confirmed their plans to attend are:

-- Mr. Steve Cartwright, Activision designer of such classic hits as "Megamania" and "Barnstorming" for the Atari VCS.

-- Mr. David Crane, Atari programmer and Activision co-founder. Designer of numerous Atari VCS classics including "Outlaw", "Slot Machine", "Freeway", and the mega-hit "Pitfall!".

-- Mr. Rob Fulop, Atari programmer and Imagic co-founder. Designed the Atari VCS versions of "Night Driver" and "Missile Command", as well as "Demon Attack". Also responsible for the highly-controversial Sega CD title, "Night Trap".

-- Mr. Arnie Katz, Mr. Bill Kunkel, and Ms. Joyce Worley. The pioneers of videogame magazine publishing. This elite media trio was responsible for co-founding Electronic Games Magazine and several others throughout the years.

-- Mr. Ed Logg, the creator of numerous arcade mega-hits including "Asteroids", "Centipede", "Millipede", "Gauntlet", and "Xybots".

-- Mr. Jay Smith, mastermind responsible for bringing us the Vectrex, the first and only vector home game system.

Up-to-the minute details and an expanded guest list, as well as discount ticket and travel information may be found at the official Classic Gaming Expo '99 (tm) Web Site at http://www.cgexpo.com.

The Classic Gaming Expo will take place at the beautiful Plaza Hotel on Saturday, August 14 and Sunday, August 15 in the heart of Las Vegas. The Expo includes back-to-back keynote presentations, an elaborate museum containing many rare and unreleased software and hardware products, demonstrations of forthcoming classic products from Hasbro, The Blue Sky Rangers, and Nyko Technologies as well as a spectacular opportunity to buy and trade classic video game systems and software.

Conceived and coordinated by two of the individuals responsible for coordinating last year's highly successful "World of Atari" event, Classic Gaming Expo(tm) is the industry's only annual event that is dedicated to celebrating the roots of electronic entertainment, bringing together industry pioneers, gaming enthusiasts and the media for the ultimate in learning, game-playing and networking. Classic Gaming Expo(tm) is a production of CGE Services, Corp. (www.cgexpo.com)

3706. Need Repair Schematic for Atari 800 (component CR207)

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-17 00:00:00 UTC
From: unibuyer@aol.com
Message-ID: <19990417174044.24785.00002334@ng-fv1.aol.com>
Source record: 53122

I booted up my Atari 800 the other day only to have smoke billow from the internal power supply board. I've tracked the culprit to a cracked component (CR207) on the power supply board.

I'm no repair specialist but I know how to solder. Can someone tell me what this component is (it appears to be a resistor) and it's value so that I can pick a replacement up at the corner supply store?

Or if anyone has an extra power supply board you'd be willing to sell I'd be interested in that.

Thanks in advance.

Neal

CR is the designator for a diode. You may be able to read the part
number on the diode with a good magnifying glass.

>Did Percom ever use single-density drives?

I'm 90% sure that they did.
The model # is AT88 S1. An Atari
computer store where I shopped and "play-tested" stuff always used a Percom in
one of their set-ups, and I don't remember
ever using DD on it. Also, the manual
only talks about single density. Ben
Poehland was quite knowledgable about
Percom's. Anybody know of an email
address for him? Haven't seen him on CSA8
for a long, long time. I'm also going to check
the Deja News archive and look back at Ben's article in AC.

Atari didn't use a standard serial line for the SIO bus. All peripherals
are intelligent (have a CPU) and require data in the proper format. I
doubt - very greatly - that there exists a PC print driver that will send
data in the SIO format.

> resistance - open one direction, short in the other.

Also make sure there is not a short after the rectifier section, which
is usually what causes the diodes to melt down. If there is a short
you will just blow another diode or whichever old part cant
handle the huge current the short will draw.

Common culprits are large filter caps and voltage regulators.

I think that Monty is the best 8 bit game.

One thing- power rectifiers are usually pretty tough. I've seen 'em get
so hot they melted their solder, and when I fixed the problem (some kind
of short in the circuitry causing a high current draw) the rectifier
still worked. So- be careful, you may have a short somewhere else that
took out the rectifier.

> By the way, do you know when I could find a field service manual for these
> machines (especially online)?
>

No, sorry. I fix a lot of things by studying the layout of components
and following the traces. Sometimes I make notes on the board, or even
sketch out a schematic to help make sense of it.
I'm an electronic tech, BTW.
-Paul

Hi Andrew,

I am writing from Germany. I would like to introduce ABBUC (Atari Bit Byter User Club) reg.assoc. to you.

ABBUC has some 500 members and provides a large PD library.

ABBUC's chief is Wolfgang Burger (mailto:wburger@cityweb.de)

You may visit ABBUC's homepage at www.atari-computer.de/abbuc or mine at www.atari-computer.de/atreju.

Since ABBUC has worldwide members I'ld like to suggest ABBUC or simply gibe this game to everybody / every club who wants it. You said it will be PD, so several distribution sites won't matter, will they?

Regards, Erhard

> way to locate a problem, often. This one sounds to me like it
> might be the OS ROM chip, did you swap that one?
> Russg

Thanks for your reply.
The sicks system has a dual OS installed,I initially thought it may have been the swich causing problems with bad connections and so I bridged the connections together manually testing each one, the standard OS rom gave a sick self test display and the secondary of unknown origin (eeprom) gave a black screen. Thinking that maybe the secondary rom was in some way shorting out the primary I desolded it and reconnected all the pins of the original OS rom back to the original location. Again the only result was a scrambled self test screen.
I've just recieved mail from someone suggesting the ram may be faulty, I'll have a scratch around for soem spare ram and give it a go. I'll post the results as it may come in handy for anyone else that has a simular problem.

Cheers,
Chris.

Please email me with your orders. Shipping is extra; usually $3.50
priority Mail. My rating scheme is at the end of the list.

ATARI ST STUFF:

Complete Software Packages
Assume there is a box unless it says otherwise.
==========

3D POOL from Microplay. Floppy, manual.
VG++/NM
$7.50

BALANCE OF POWER THE 1990 EDITION by Chris Crawford from Mindscape.
3.5" floppy requires Dual-sided drive. Manual, warranty card,
reference card. Box has two small puncture wounds on rear side,
otherwise perfect.
VG+/NM
$10.00

BARD'S TALE; TALES OF THE UNKNOWN. Electronic Arts. 1985. Role
playing. Two 3.5" floppys, manual, loading instructions, folder.
Good/VG++
$8.00

BATTLEHAWKS 1942 from LucasFilm. Two 3.5" floppys, manual (which is a
spiral bound book).. Box is shrinkwrapped except top where opende. 1"
tear in flap).
VG++/VG++
$20.00

CAPTAIN FIZZ MEETS THE BLASTER-TRONS. from Psygnosis. 1988. 3.5"
floppy, manual. Platform game. Box crushed a bit only on underside.
VG+/NM
$10.00

CHAMPIONSHIP WRESTLING from Epyx. 3.5" floppy, manual, box. Box has
been crushed
VG+/VG+
$7.50

CHAOS STRIKES BACK expansion set #1 from FTL Games for Dungeon Master.
Requires a saved game from Dungeon Master. 4 floppys: Master disk;
Utility Disk;disk editor; hint disk, manual, paper map and FTL paper
patch.
VG/VG++

$12.00

CYBER STUDIO CAD-3D 2.0 & CYBERMATE 1.1 from Antic software. Floppys, manual in a plastic 3 ring folder.
VG++/VG++
$18.00

DATA MANAGER ST from Timeworks. Floppy, manual in a large notebook/box. Database program
VG+/Vg++
$15.00

EAST VS. WEST BERLIN 1948 from Time Warp. 1989. Floppy, manual, audio cassette. "First ever computer package to include a 15 minute film with real sound track on cassette."
New (shrink wrap comming off)
$18.00

ELITE from Rainbird. 3.5" floppy for color machines only. Manual, loading card, warranty card.
VG++/NM
$10.00

FALCON THE F-16 FIGHTER SIM from Spectrum Holobyte. 1987. Two 3.5" floppys, manual, map, warranty cards, lots of inserts. Box is shrinkwrapped except at top, where opened.
VG++/NM
$20.00

FALCON THE F-16 FIGHTER SIM from Spectrum Holobyte. 1987. Two 3.5" floppys, manual, map, warranty cards, code wheel lots of inserts. Box is shrinkwrapped except at top, where opened.
VG+/NM
$18.00

FIRE-BRIGADE; THE BATTLE FOR KIEV 1943 from Panther Games. Ver. 1.2. Floppy, manual, supplament, 3 maps, etc.
NM/NM
$15.00

HOYLE BOOK OF GAMES VOLUME 2 SOLITARE from Sierra. 3.5" floppy, manual, warranty card.
VG++/NM
$10.00

KING OF CHICAGO from Cinemaware. Two 3.5" floppys, manual, loading card.
VG+/vg++
$20.00

LEISURE SUIT LARRY IN THE LAND OF THE LOUNGE LIZARDS from Sierra. Two 3.5" floppys, manual, reference card, aratist reference card, read-me-first sheet.

VG++/VG++
$15.00

M1 TANK PLATOON from Microprose. 2 floppys, manual, keyboard template, supplaments.
VG+/VG++
$12.00

MARBLE MADNESS from EA. 2 floppys, no manual, in a folder/box.
VG++
$5.00

PALADIN from Omnitrend. includes the Quest disk. 3.5" floppys, manual.
VG++/NM
$12.00

PALADIN from Omnitrend. includes the Quest disk. 3.5" floppys, manual.
VG/NM
$10.00

POPULOUS by Bullfrog from Electronic Arts. There are 2 differend 3.5" floppys in this package. One has a yellow label #e09731XL and the other is black #352702. The spring for the sliding door is missing on the Yellow label so the black on may haver been a replacement. Manual, warranty card, loading instructions.
NM/NM
$15.00

PRINTMASTER PLUS from Unison World. Floppy, manual, etc. Also included is ART GALLERY I and ART GALLERY II disks and a poster for those disks. Also included is FONTS AND BORDERS floppy plus it's manual.
VG+/VG++
$12.00

PROCOPY ST from ProCo. Backup Utility. Floppy, manual in a baggie.

ROCKET RANGER. For the Atari ST. Cimemaware. Interactive Movie. Complete with all props, and three 3.5" floppys.
VG++/NM.
$25.00

S.D.I. from Cinemaware.6 Two 3.5" floppys, manual.
VG+/VG++
$20.00

SHADOW OF THE BEAST from Psygnosis. Two 3.5" floppys, manual.
VG++/NM
$10.00

SPACE CUTTER from Rainbird. 3.5" floppy, manual, warranty card. This looks new but there is a 1" scrape on top flap of box.
VG++/NM
$10.00

STAC THE ATARI ST ADVENTURE CREATOR. from Terrific Software. 1988. Two 3.5" floppys, manual.
NM/NM
$10.00

STARFLEET I from Interstel. NO Floppy, 2 manuals, quick reference card.
GOOD/VG++ (the top of the box is nice. The back has a puncture wound).

STARGLIDER II from Rainbird. Dual Amiga/Atari ST version. Floppy, audio cassette tape, key guide, warranty card, play guide, novella.
VG++/NM
$15.00

STARQUAKE from Terrific Software. 3.5" floppy, manual, warranty card, aftermarket paper map. Box is still shrinkwrapped except top where opened.
VG++/VG++
$10.00

SWIFTCALC ST from Timeworks. Floppy, manual in a large notebook/box. Spreadsheet program.
VG+/Vg++
$15.00

TALESPIN. AN ADVENTURE GAME CREATION PROGRAM from Microdeal. 1989. Two 3.5" floppys, manual, warranty card, lots of inserts. Box has one 3" wrincle.
VG++/NM
$10.00

TETRIS from Spectrum Holobyte. 1987. Two 3.5" floppys, manual, warranty card.
VG+/NM
$10.00

THEIR FINEST HOUR from LucasFilm Games. Two 3.5" floppys, manual (a spiral bound book), code wheel, warranty card, inserts, reference card.
VG++/NM
$15

TOWER TOPPLER from Epyx. 3.5" floppy for color machines only. Platform game. Manual, loading card, catalog, lots of inserts. Box is shrinkwrapped except at top.
VG++/NM
$7.50

TRAILBLAZER from Mindscape. Floppy, manual, in a folder/box.
VG++/VG++
$7.50

TV SPORTS FOOTBALL from Cimemaware. 3.5" floppy, manual, player guide, warranty card, catalog, lots of inserts.

VG+/NM
$15.00

WAR IN MIDDLE EARTH from Melbourne House. three 3.5" floppys, manual.
Missing the paper map.
VG++/G++
$15.00

WORLD KARATE CHAMPIONSHIP from Epyx. Two 3.5" floppys, manual, box.
Box has been crushed. Manual has rusty staples.
VG+/VG+
$7.50

ZAK McKRACKEN AND THE ALIEN MINDBENDERS. from Lucas Arts. 1988.
Graphic adventure. Three 3.5" floppys, manual, security card, National
Inquisitor newspaper, box.
VG++/VG++.
$15.00

ZAK McKRACKEN AND THE ALIEN MINDBENDERS. from Lucas Arts. 1988.
Graphic adventure. Three 3.5" floppys, manual, security card, National
Inquisitor newspaper, box.
VG+/VG+.
$15.00

ZAK McKRACKEN AND THE ALIEN MINDBENDERS. Hint Book. Lucas Arts. still
usable but missing the red plastic strip fro viewing the book.
VG++
$5.00

ZANY GOLF from Electronic Arts. Two 3.5" floppys, box. No manual.
VG+/NM
$5.00

Floppy disk only
==========

TV TITLES 2.0 from J.P. Deziel Serial # 120.
VG++
$5.00

Here is the way I grade software. There are seperate grades for the
box first, and what's in the box second. For example, VG++/NM would
mean the box is VG++ and the contents of the box is near mint.

Shrinkwrapped (ss)
Self-explanatory.

Near Mint (NM)
This is the highest grade for an unsealed item.
"Mint" is not used as a grade because, without a
microscope and 40
minutes of inspection, perfection cannot be verified
to

everyone's satisfaction. Near Mint ranges from
appearing unused, to an item that may have been used,
but is
without a notable cosmetic defect as evidence of that
use.

Basically, a NM/NM package should be a reasonable
simile to a fresh, unused
copy.

Very Good Plus Plus (VG++)
This grade refers to an attractive,
fresh-in-appearance item that, upon closer
inspection, has been disqualified from the NM
category due to (usually)
one flaw that could not be overlooked.

For boxes, this includes: a small split of the seam;
some clear tape on one corner.
Basically, and this includes the contents of the box
as well, a VG++ item is qualified by having a
noticeable, yet functionally insignificant defect that
verifies that the item has been used. A VG++ item
appears neither blatantly
second-hand, nor does it have the sparkle of
"brand-new".

Very Good Plus (VG+)
This is the broadest grade serving as a catch-all for
any decent, presentable,
average, usable (not marred or defective) item.
People ordering VG+ items
usually are prepared to accept an imperfect item
representing the artifact
that it is, and are going to enjoy it without being
excessively preoccupied
with cosmetic details. VG+ is a fine copy that is
indisputably "used", being
your basic "decent used package" for utilitarian
purposes.

Boxes and contents will have some combination of one
to a few of the following
defects:
partial seam split (with or without clear tape
repairs), minor dirt ring,
some minor warping due to moisture, a creased
corner, small squishing of the
box.
The box and contents must be free of major
defacements, and will certainly not have ALL of the
preceding minor ones on the same piece!

Very Good (VG)
This is the beginning of "rough" for collector's
purposes. A VG record is
usually one that a collector will buy to fill a
"hole" in his/her library until a better copy
comes along. We usually don't advertise items with either VG
covers or discs unless they are deemed scarce enough
to attract a collector
for this purpose.

Good Plus (G+)
Averaged between VG and G,

Good (G)
Items graded "good" are very used and only
presentable to the least
discriminating collector. This classification is
usually employed for
boxes when it's the contents that's worth collecting,
and vice-versa; or when
the component in question is so very rare that its
existence in any condition
is regarded as manna from heaven. It should not be
confused as referring to "Good" COLLECTIBLE

Fair (Fr) or Poor (P) or Missing Component (*)
For advertising purposes, if either box or contents
is either Fair or Poor, we
treat it as functionally missing , and we have graded
only the component
that is G or better, essentially selling that
component "as is", theoretically
without its decrepit companion. In these cases, the
grade should include an
asterisk in place of the Fair/Poor cover or jacket to
reflect its effective
absence.

Supplementary Notations
Condition augmentations: there are some common
exceptions to the overall
condition of an item that merit independent notation
from the
overall grade assigned, rather than being "averaged
in" as with standard
gradeable wear. These are usually after-production
aberrations courtesy of
the record company such as:

Writing on front cover, back cover, label, tape
on seams or spine,
water damage (especially if it's growing "hair"),
applied era "pop-culture"

stickers (such as "right-on" with fist) etc.
These minute details are usually only noted on
rare and expensive items.

3720. Using 3 1/2 disk drive on Atari 8-bit

Newsgroup: comp.sys.atari.8bit

From: Aaron Wheeler <aaronat@ihug.co.nz>
Message-ID: <7fbrmtktc1@newsource.ihug.co.nz>
Source record: 53129

Hi everyone,

I'm about to add a Scanned Manual Archive to my Home page
'Holmes Atari 8 bit Games'
And have scanned in alot of Atari original manuals/catalogues/
and anything else I could find already. And have a fair amount
of stuff. But I dont have everything, so I need your help. I was
hoping to start a Atari Documentation Project. Does one exist
already?

The scans need to be graphical(in JPG format), and not OCR'ed Text.
Hardware and software.

If you have any original manuals for the Atari 8bit Computer range,
and have access to a scanner, Can you please reply to me with
details of which manuals you can scan in. I'll co ordinate the
scanning so that no manuals are doubled up on.

Also, if you have manuals that you could donate to the project, then
they would be greatfully accepted, and would be scanned in by
myself.

Thank you to those who have donated manuals already...

Many thanks for your time..

Aaron,

Maintainer of Holmes Atari 8bit Games Page.
http://homepages.ihug.co.nz/~aaronat/atari.html

You shouldn't load games using a full DOS on Disk.
What you need is a gamedos, which provides a short menu asking
you which game to load.

If you wanna stay at DOS 2.x format, you may use the one from E.Reuss.

If you switch to Sparta DOS format, you can make a 16 MB ATR file
which allows you to store tons of games in it. Creating Subdirs of
A to Z allows you to sort things. The use Micro Sparta DOS (MS-DOS)
developped by BW-Soft as a gamedos. It allows to enter long filenames
for the menu.

Regards, Erhard

Did Percom ever use single-density drives? I know that you could get single-sided drives as well as double sided, but I thought they always used double density.

Source record: 53137

CR207 is one of the power rectifiers in the main bridge circuit. Many times these things look bad but are not. If it is really bad (you could not read the stripe) replace it with a 3amp 200v power diode. Use an ohmmeter and measure its resistance - open one direction, short in the other.

Bob

3730. FOUND! Qb

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-19 00:00:00 UTC
From: Andrew Davie <adavie@mad.scientist.com>
Message-ID: <3719eee8.0@nexus.comcen.com.au>
Source record: 53046

A long time ago (15+ years) I developed a game on the Atari 400/800 machines.
Until recently (my system was stolen in 1986), I didn't have a copy of the game, but now I'm happy to report it has once again been FOUND! I'd been looking for some time, and had posted an earlier request for anyone who had this program to contact me (you can see the picture at http://www.comcen.com.au/~adavie/qb2.jpg) I hadn't seen this program running for well over 10 years, before tonight. I'm pretty "zoned out" ;)
OK, so now I have a copy - and I'd like to distribute it to anyone else who also wants a copy. It's actually (ahem) not a bad game, really - quite polished and playable. I'm writing to the group to ask for a volunteer (preferably a manager of an Atari archive) who will make a copy to PC of the binary file on a floppy diskette that I will provide. I'll post the copy to the volunteer, and only ask in return that a binary file is emailed back to me. After that, the program goes public domain.
So, any volunteers?
A

The 1771 is a 40 pin device as used in the 810. It doesn;t have a data
seperator. I am not sure it is capiable of doing double density or
250 Kbit. The data book you have would cover the 1770, 1772 and 1773.
does your book cover the 179X series??

(Long Post)
I found 7 or 8 relevant posts in the Deja News
archive in the 1995-1996 era. Pretty much the
same discussion - different people.
I also went back an re-read BP's article
on Percoms in AC. He talked about the
AT series doing DD, but he didn't get into
the area of the various controller boards.

Ben also talked about the history of Percom
including the disposition of its physical assets
after the company ceased doing business.
He spoke of most of its parts ultimately going
to a private individual in the DC area. So
perhaps someone is still selling parts. (?)

Does anyone have an AT series that does
double density? If so, what is its model
number? Does anyone know if the AT
series came before or after the RFD's?

BTW, there were 264 posts that referred to
Percom. Probably 30 made more than a
passing reference. I saved the text in 7 or 8.
Larry

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 04/19/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}

$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 3.00 3-D Tic-Tac-Toe
$ 3.00 Alphabet Zoo [Spinnaker] -- no label
$ 3.00 Atariwriter
$ 3.00 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede
$ 3.00 Dig Dug
$ 3.00 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 5.00 Gateway to Apshai [Epyx]
$ 1.25 Missile Command
$ 2.50 Pac-Man
$ 3.00 Qix
$ 1.25 Space Invaders
$ 2.50 Star Raiders
$ 2.50 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 4.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

3738. Moving from ATR to Atari 5 1/4" disk format

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-19 00:00:00 UTC
From: lbaeza@yahoo.com
Message-ID: <7ffeivarb1@nnrp1.dejanews.com>
Source record: 53054

Hello everybody! I have an ATARI800XL with a disk-drive (1050?). Also I have a PC with a double density 5 1/4" dik drive. I have already an Atari 800XL emulator running on my PC, loading Atari disk images saved as .ATR files. My question is: How can I play all this .ATR games in my real Atari? How do I move from .ATR to valid Atari-readable disk format? If anyone has some information or knews an URL to solve this problem, please let me know at lbaeza@yahoo.com or at this discussion group.

PD: ONLY USING THE PC 5 1/4" DISK DRIVE - NOT USING AN ATARI2PC CABLE NOR SOMETHING LIKE THAT

I almost hate saying this, but I think Xformer 3.6 or higher in DOS mode (NOT Xformer 98 for Windows!) will work best on slower machines. Disable the sound though. Xformer doesn't do sound well and besides, it eats up a lot of cycles emulating sound. The best thing Xformer has going for it is the ability to run at 100% Atari speed on slower PC machines.
I have an old 233 Pentium that runs Atari800win at 100% for most Atari games, and that's with pretty darn good sound too. I stuck an old 16 bit Soundblaster card inside for what I think is the best sound card for Atari800win.

From: aa700@cleveland.Freenet.Edu
Message-ID: <7fft6sfse1@alexander.INS.CWRU.Edu>
Source record: 53057

In a previous article, lwhite6497@aol.com (LWhite6497) says:

>>Did Percom ever use single-density drives?

Gleaned from Ben's article in AC, Percom drive models go like:

==> Percom RFD4x-Sy
where: x=0 -> a single-sided drive
x=4 -> a double-sided drive
y=1 -> a single-drive unit
y=2 -> a dual-drive unit

==> Percom AT88-Sy[PD]
where: y=1 -> a single-drive unit
y=2 -> a dual-drive unit
PD -> equipped with a built-in parallel printer port

(I happen to have an AT88-S1PD myself.)

Message-ID: <7fftt4$i3h$1@pale-rider.INS.CWRU.Edu>
Source record: 53058

At the same auction I also netted a Happy 810. This does work; very cool!

Question. according to the docs, my SDX cart has support for Happy 1050's
built in warp speed. Can I find a utility to let SDX support my happy
810's high speed as well?

Seems like such a thing should exist.

3743. Dead MIO

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-19 00:00:00 UTC
From: aa700@cleveland.Freenet.Edu
Message-ID: <7fftin$gi0$1@alexander.INS.CWRU.Edu>
Source record: 53059

At our most recent SPACE club auction I managed to pick up a 256K MIO.

But I can't get it to show any sign of life. Neither LED comes on, and the computer won't boot up when the MIO is attached.

Who repairs MIO's?

Actually,

Xformer pretty much sucks no matter what version you use. Its good for DOS type operations only.

Use XL-It for an older machine. Better compatibility and good sound.

I need to clarify my msg. Im looking for a XF551 with a 3 1/2 mech already in it.
I thought 720K was the max available for the 8bits so I put it in the msg. This
actually confused what I was looking for!

I want a 3 1/2 inh disk drive to hook up to my 130XE. I have plenty of 1050's, but
as I understand it they cant be upgraded to a 3 1/2 mech.

So,
If someone has a XF551 with a 3 1/2 mech (720/1.44) for sale let me know how much.

Hi Michael-
Have you actually tried it? It might work, but
I doubt it. I believe you need the Rev 7
upgrade Rom.
It makes the 810 Happy nearly equivalent to
the 1050. It also lets you use the Rev 7/7.1 software. I think that B&C may
have them - it's worth a look.

Source record: 53068

I recently obtained an ASTRA 1620. It is a double
SS/DD 5-1/4 drive. I have upgraded it by installing a
DS/DD 5-1/4 and a DS/HD 3-1/2 transport in it. These seem
to work but I haven't fully tested it yet. (Have only
tried DS/DD on the 3-1/2, can the 8-bits do HD? How?)
Does anyone have any info on this drive unit? It seems
to be locked in to Drives 1 and 2, any way to change
this? Any info would be appreciated.

Thanks,
Boyd

Like the 2600, it's all relative to the scanline, only with the
400/800, there is a more standardized way of making changes to the
display, known as the display list.

While the 400/800 can not pick any of its available 256 colors on any
arbitrary pixel, it can display all 256 colors on a single screen by
shifting palettes and modes on a scanline per scanline basis.

This is different from, let's say, the Commodore 64 with its fixed 16
color palette.

BTW, I believe there are also modes that are similar to GTIA 16-shade
modes that have 16 hues rather than 16 shades.

The 400/800 is very rich in display options.

Yeah but that is useless except as a special effect, you can't draw colorful
pictures with that.

> BTW, I believe there are also modes that are similar to GTIA 16-shade
> modes that have 16 hues rather than 16 shades.

Yeah, but the picture would have colors but would be very flat and bland
without brights and darks. The greyscale (or bluescale or whateverscale) are
in my opinionthe most useful.

> The 400/800 is very rich in display options.

It's okay for its time! If they had managed to cram in 640 x 192 in 2, wow.

It doesn't bother me at all. I think a single post is okay. When someone itemizes his 13 Atari item, each in its own usenet ad, THAT is a problem. However the simple ads such as the one you criticized are relevant to the group and 100% okay in my opinion.

Just scroll on by Art!

What was wrong with using A800win's LOAD EXE/COM option?
This worked with files like ChopSuey/DropZone/Gauntlet
(Admittedly after stripping a small header from the file using
a Hex editor ;-)

>If you wanna stay at DOS 2.x format, you may use the one from E.Reuss.
>

I tried SpartaDos and this wouldn't load the program (or run it, I'm not
sure). Basically I had the file on the H1: drive, went to it and typed
chimera.exe and the prompt just comes back. Do I have to use a D drive? What
tools can you use for this? I have ImageMan but this works appears to only
know Atari DOS ATRs.

Well I guess I could be considered one too.

NAME: Bob Ely
LOCATION: Trenton, NJ
E-MAIL ADDRESS: Pick one from below.
COMPUTER TYPES: 2-130XE, 1-1200XL, 1-800XL, 1-800 and 1-400
2-XF551, 1-Rana
1256K MI/O, BASIC XL & XE, SpartaDOS X, MAC65, Action! and a whole
bunch more!!!
I also have Atari800Win, PC Xformer 95, A.P.E. SIO2PC and more.

I've been into Atari 8-bit systems since 1982 when I was selling them.
I bought my first 800XL in January 1983. I've been a member if the
Jersey Atari Computer Society for many years. (JACS BBS (609) 346-1224)
JACS Web Site http://users.snip.net/~mhop/ . I also frequent this ng.

3769. FS: Lotsa 8 bit Atari stuff

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-20 00:00:00 UTC
From: Constance Merritt <conniemerr@earthlink.net>
Message-ID: <7fi7orhkf1@oak.prod.itd.earthlink.net>
Source record: 53083

I have a whole bunch of 8 bit Atari stuff, probably too much to list out. It was mostly collected over the years, from garage sales and stuff. I am getting ready to move to a smaller place, and I would like to get rid off all of it.

Major items include 3 800's, an 800XL, 3 810 drives, a 1050 drive, 3 printers, and many other miscellaneous items including software, joysticks and paddles, a 410 program recorder... Everything is in working condition, and good cosmetically.

I am in the Philadelphia, Pennsylvania area, shipping all this stuff would be major nightmare.

No reasonable offer for any or all refused. Call 215-887-0687
or email connieMerr@earthlink.net

>Only 5 days to bid!

Who cares?! I have one collecting dust and you can pick one up for
like a few dollars at any hamfest or flee market.

The stuff on ebay is usually not rare (rather hype'd up) and I a sure
everyone knows about ebay so why post here about it?

If I want to read the ebay crap I'll go to ebay....
Anyone else find these ebay posting a waste of band width?

3774. Re: Making TRAKs #2

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: Jason Drywood <jdrywood@eatonyaleltd.attcanada.net>
Message-ID: <KO9T2.2154$ho1.747@tundra.ops.attcanada.net>
Source record: 52990

I have one of these drives.

I also have the "Turbo Charged Software" Installed.

This upgrade adds a 4k buffer to the drive, giving it the capability of reading entire disk tracks at once, and then bursting the data to the computer. The best read performance occurs on disks with the standard single density interleave.

The turbo works in single density only and is ineffective in double density format.

This 4k buffer also doubles as a printer buffer, if you were were fortunate enough to own a printer at the time, and were able to find a cable to attach the built in printer interface of the Trak drive to the printer.

Larry:

I also have a Happy 810, but it only works with Happy software up to 6.5.

Who is B&C? I'd be interested in finding an updated rom.

Would this allow the 810 to r/w double density like the 1050? Or do you
mean "nearly equivalent" with regards to backups.

$338!!!!
Amazing! But the prices that some things
auction for is incredible when one
considers that some of these can still be
purchased NEW for much less.
BTW - as I recall Magic Dump was a RIGHT
slot cart for the 800. Anybody remember for
sure?
Larry

3781. Re: "The Best" Disk Drive

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990421001823.11751.00003068@ng102.aol.com>
Source record: 52997

```
>What was "the best" Atari or 3rd Party
>disk drive, and why?

This thread has died down pretty well, so
I'll provide my own thoughts/reasons.

1. 1050 because it was cheap, plentiful, and
so upgradable. (But on the minus side, it
gave the world "enhanced density" ...sigh!)
2. XF551 because it is capable (stock) of
720K and (near) ultra speed.
3. Indus GT. Quiet, durable, and has
limited ultra speed (Synchromesh).

Larry
```

3782. Atari Basic Decompiler

Newsgroup: comp.sys.atari.8bit

From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <371D8C00.D1C1409C@asw.cz>
Source record: 52998

Hello!

Yesterday I've posted Atari/Turbo Basic decompiler on my site.

Today I made small update. Apologies to those, who downloaded it
yesterday (somebody from ispp8.Sowi.Uni-Mainz.DE &
ht0407-0.dial.wxs.nl). There is bug in BCDs in version 1.00.

I've found it when decompiling Scram when rector power was multiplied by
9.9e+127 :)

3785. Atari 400/800 Qb: Gauging Interest for Production Release

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: Andrew Davie <adavie@mad.scientist.com>
Message-ID: <371d962e.0@nexus.comcen.com.au>
Source record: 53001

Recently, as I announced in the group, I have rediscovered a copy of a game I wrote for the Atari 400/800 system (way back in '83 or so). Called "Qb", or "Cubie", until recently I only had a single screenshot (which is still at http://www.comcen.com.au/~adavie/qb2.jpg). I've been pleasantly surprised to rediscover how polished and playable the game actually is. Now that I have found the program again (and, yes, a disk marked "source code"), my intentions are twofold.

1) Release the program binary into the public domain FREE (again) ASAP.
2) Produce a professional release, containing manual, 5.25" Atari disk, 3.5" IBM disk, annotated source code listing, and history of the game.

My question to the masses is...

Would you, personally, be interested in purchasing a one-off limited-release version (numbered, signed) - say, of only 100 copies, selling at US$20 each?

My intention would be to limit sales to a single copy per person, register (and perhaps hardwire into the production package) the purchaser name/number. Also, I will NOT be accepting any money whatsoever (orders, possibly) until the package is finished and ready to ship. I will preproduce a sample copy and send to a reliable respected person (Bob Colbert - you free?) to prove that this is not vapourware, beforehand.

So, feedback please... am I wasting my time? Any feedback appreciated - to the group or private.

Cheers
A

"Andrew Davie" <adavie@mad.scientist.com> wrote:

<<Now that I
have found the program again (and, yes, a disk marked "source code"), my
intentions are twofold.
1) Release the program binary into the public domain FREE (again) ASAP.
2) Produce a professional release, containing manual, 5.25" Atari disk, 3.5"
IBM disk, annotated source code listing, and history of the game.
My question to the masses is...
Would you, personally, be interested in purchasing a one-off limited-release
version (numbered, signed) - say, of only 100 copies, selling at US$20 each? >>

I would buy it in a second... but only if it were released on cartridge.
Disk-based software (to me, at least) isn't very collectible due to the
unstable nature of the media. It's nice to know that my copy of Bounty Bob (on
cart) will still be working 20 more years from now without a problem. I
realize that cartridges would cost more to make, but I would be willing to pay
more than $20 for one. I think it would make a great piece.

Unfortunately, unless somebody can provide a 16K+ cartridge, a cart is out
of the question!
It's a big program. And, memory fails me if I used self-modifying code or
not, anyway :)

I would get the P/D release and play it, and if I liked it I would probably
buy a copy. It's hard to judge the merits of the game based on the
screenshot you have there.. :)

See picture at:
http://home.sprintmail.com/~hsappleton/atari1020.jpg

Price: $39.00 + shipping
VISA, MASTERCARD, AMERICAN EXPRESS, MONEY ORDER accepted.

To Order: Email or call 302-983-4293 with shipping address.

The Atari 1020 Color Printer was the only released color prinPrice: $39.00 +
shipping
VISA, MASTERCARD, AMERICAN EXPRESS, MONEY ORDER accepted.

To Order: Email or call 302-983-4293 with shipping address.ter ever made by Atari. It had a 40 column printing width and used 4 color pens to combine and drawing up to 256 colors. The printer was small and fairly quiet. It came packaged with AtariGraphics cassette program (Later, Atari released AtariGraphics in cartridge form and was shipped with the Atari CX-75 Lightpen in Cartridge form). The printer was simple to use, you plugged it in, powered it on, draw your pictures and printed, very straight forward and simple. Atari's 1983 version of Plug N Play which so eagerly touted by todays software/hardware manufactures. For printing color graphics in programs outside of AtariGraphics, example code was included so that users could write their own programs and use color printing with them.

My experience as a seller on eBay is that when bidding runs up way past what what the item is actually worth, the bidder usually comes to his senses after the fact, and doesn't pay. I'd be highly surprised if anyone actually wrote a check for $338.00 for that bundle of carts. They WEREN'T that rare. Right slot? So what. I've got a Monkey Wrench that I'll sell for $100 in that case. Hell, for another $100 I'll throw in a BIT-3 80 column card and a RAM-cram!

Another thing that is fishy: How did the bidding suddenly JUMP from $97 to $333 in a single bid?! What am I missing here?

Michael,

Good to know your still here.

Getting employers to realise the enourmous benefit of Usenet is a constant battle, and the media focus on a few unsavoury newsgroups certainly doesn't help our cause - even after you point out that they filter out those groups.

Years ago I used to use a public news server from one of the German universities, but I havn't tried that in years. Now I just use my ISPs news-server of this one at work.

Regards

Graham

3796. 1050 repair question

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: p1nb0t@my-dejanews.com
Message-ID: <7fl288elc1@nnrp1.dejanews.com>
Source record: 53012

I'm looking at a 1050 that doesn't seem to power up at all. The power supply is delivering the right voltage, and a heat sink is warming up, but no motor sounds and no power light. No conspicuous shorts [that I've noticed :)]

Given that I'm a total amateur basically doing what I can on the basis of a few semesters of physics labs, can anyone point me to anything I should check out?

Also, if I give up does anyone in the Portland, OR area still fix these?

The Atari has basic and (I think, it's been a while), 8K RAM. Joystick, manuals. Faux-leopard-skin dust cover (seriously). All believed to be working, although I don't remember how it works. If it doesn't work when you come, you can have it for free. If it does work, make me an offer.

Stuff is located in Maspeth, Queens (that's near Elmhurst, if you thought further east on Long Island, you were thinking of Massepequa), and will be available until April 30 (possibly until May 9) when it goes in the trash.

I'll be checking this newsgroup, but for quickest response, send email.

spearsk@mc-mc.com wrote:

<<Another thing that is fishy: How did the bidding suddenly JUMP from $97 to $333 in a single bid?! What am I missing here? >>

Well, I was the bidder that drove it from around $31 to $97. I wanted the Turmoil & Magic Dump and figured that I'd pay around $100 for the lot and then sell off the rest that I already had. After my $97.15 bid, I still wasn't the high bidder and gave up. I didn't want to go past the $100 mark. The next day I was shocked to see that it was around $200. It didn't jump to $338 in a single bid. A guy from France outbid the previous bidder at around $200. Then that guy must've kept bidding until he finally beat the French guy's bid at $338. All it takes is 2 guys that really want something to keep driving the bid sky-high. I think that $338 is totally insane though. None of those carts are *that* special.

3799. plug a PC gamepad into my Atari?

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: dcaputi@worldnet.att.net
Message-ID: <7flhqqtvc1@nnrp1.dejanews.com>
Source record: 53015

Is there a modern replacement for the Atari joystick that works in the old 2600 and/or 8bit computer?

I tried Radio Shack but the guy thought I was nuts wanting to play with my old video games.

I suppose I could make something using a PC gamepad but I would rather buy a ready made pad or perhaps an adapter(?).

- Dan C.

Check the rectifier diodes at the back of the board. They're
tucked down betwen a couple of large black capacitors. This is the most
common failure on the 1050 disk drives.

3814. Re: "The Best" Disk Drive

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-21 00:00:00 UTC
From: BobKlaas <bobkla19@sisna.com>
Message-ID: <371E77C9.F7C99A89@sisna.com>
Source record: 53030

The Cadalac of the Atari 8-bit was in fact the Indus Disk Drive.

The 1050 with enhanced density would come from the factory non-working had to be repaired in its earlier stages. Did several fixes on the first one out on the market, and each correct the problem described.

The Indus came out great drive, went through a buyout that even enhanced its greatness. You at one time could send back a junker drive for a small fee at the time and get a factory replacement for about $50.00 plus s/h, which at $150.00 a drive was a deal..I turned at least 3, that were totally fried. They complained about the drive but in fact did live up to their advertisement and replaced them at the cost they required.

The second most desirable disk drive would have to be a Rana, which was the sister (brother) of the Indus. Family squabbles split the two. The Rana is the only drive that will read all formats, and format a disk in any one of the formats without a computer attached to the disk drive. The only fault with the Rana was the Mech. they installed in the original. One could not read all formats, and protection faults that were available at the time. I spent 8 hours aligning a Rana to read a disk the Mech. was not deigned to read..Thought I was going nuts but was not me (now I am!) but the Mech., they installed in the drive. Since then I have found out that if you want to align a Rana to a specific disk read then through out the Scope and manually align the disk, takes about 5 minutes opposed to hours on the Scope.

The XF 551, had the cheapest board ever produced for the Atari 8-bit, if you moved the SIO cable to the Right or Left more than a couple of times you would break the circuit board trace in several places with one change of the SIO cable. Modifications have been documented and each work to correct the problem with the drive.

In second place would have to be the Percom disk drive. In its advance stages you could attach 3 Slave drives, Single or Double density disk drives, for a total or 4 drives. And further testing equated that you could actually attach a 720k 3 1/2 inch drive to it and it would format and read through Sparta Dos. Never tried MyDos but believe both would do the job.

The next double stacked drive would have to be the Double D double stacked disk drive. Have fixed a few, real pain but well built and durable.

But the real Tanker of all would have to be the Atari 810 disk drive, in its day with the Happy Enhancement would have been the Ultimate.

Today? The Happy Enhanced 1050, or a generic Happy Drive 1050, the Duplicator, was a flop, they still owe me 2 Duplicators that were disfintional but that was history.

Don't forget the Original Trak disk drive, the first original double density disk drive, reads single or Double Density no other. Great drive when it works, easily fixed so still piratical.

So in sumation..which is the best disk drive? It is the drive you have that meets your needs, accommodates your pocketbook, and will last as long as you wish to us the drive.

Thanks to Bob Wooley for his efforts in keeping the 8-bit alive
Additional thanks to Tom Hunt for his efforts in programing.
Many Thanks to Kenneth Ames for his efforts in hardware/software items that are still being developed.

I do appreciate all the efforts provided, to those of you that I do not personally know that have extend your help and efforts in the behalf of any Atari 8-bit user.

Sorry to be so long winded in response.

bob

Check the power diodes on the side of the heat sink, the aluminum side arround the back side of the board. One of these could have a broken connection? Or check the power in diaodes. It is a bank of 4 that converts the ac to dc. Like the 4001 or ect at the back of the board.

Put a v/ohm meter across these at 24v dc and see what you get, if nothing then replace the diaode. First two will give you lower voltage like abot 9v dc and the second will bump up to 12=24? if nothing then replace the 4001 there.

bob

3816. Atari Question?

Message-ID: <371E7D4A.84348966@sisna.com>
Source record: 53032

Which do you prefer?

1. A forsale list here with a specific price for an Item/s or a post
that the Item is avaialble on EBAY, up for auction?

I have heard pros and cons on both. Here they get it for a less price as
I often post, on Ebay they generlly pay more than what would have been
available here or through Video 61 for less. What do you think? Which
would you prefer?

Just wondering.. I generally have more available than what I post as do
many posters. I do repair, upgrades, ect..(at my leasure time). I
have spent a year on doing a CD-ROM for the Atari 8-bit includes in the
second version about 80% of the ABUG original CD-ROM plus 3 clubs from
the USA for a full cd-rom of Atari 8-bit p/d software. and a couple of
software rights I own. Price $20.00 shipped.

Send Check or m/o to

Bob Klaas
4267 W. Midway Drive
Salt Lake City, Ut. 84120.

These are redily available..version 1.2 of the CD-ROM.. Working on
another version.

You might want to check user group newsletters. Many groups require that you join the group (and pay dues) to get them, but once you do that your group may engage in newsletter exchange with other groups and make the exchanges available.

Many user groups are now putting their newsletters on disk, rather than printing them. Mine, Ol' Hackers AUG, has been doing that for years. If you're interested, send me e-mail and I'll send you details.

Seems to me there are still BBSs around, but the Internet in general, and perhaps this newsgroup in particular seem to have stolen a lot of the action. I still check up on the Fido Atari echo, even though my local BBS doesn't carry it any more. I simply telnet in to one that does. I also telnet into Tom Hunt's bbs, now that it's available that way.

I believe the joyboard is used for skiing games. I never owned a skiing game so I never got to use it. You plug it into the joystick port and stand on it. Sorry, but I believe this item is gone.

two or three things I just came across:

a nice old Atari poster reading "the Atari Advantage" on the front and on the back is revealed a cartridge listing for the XE-GS
Manual called "Percom AT88SPD System Drive"
Diamond OS on 5 1/4" floppy
Sampler Issue of a Magazine called "Code Works" - 3/96

Technically, Atari Classics is still a going magazine, but we have not published in almost two years.... The fact that not one subscriber has requested a refund is at least an indication of Atari user's patience, if not dedication. Our User Group, the SLCC, still prints a monthly newsletter although it is just a single sheet of minutes and a little gab - nothing like the big time publication it once was. Our exchange newsletter program receives maybe three or four other Clubs on a good month.

Go to Kay Bee's toy store or a flea market and grab a Sega Genesis
game pad. They work great. I paid $5 at Kay Bee's for a 6 button and
0.50 cents for an original 3 button at a flea market. I still find a
joystick is best for some games.

:
: Sure is. You can use any pad/joystick designed for the Sega Genesis. The Sega
: 6-button pad in particular has an excellent feel to it. You can pick these up
: at Toys 'R Us for $9.99 each.

Actually, I found you can't use "ANY" Sega Genesis pad... I bought one that
had all of the turbo buttons and crap on it, and it just didn't work at all.

BTW, while 6 buttons is way more than you can easily read with an Atari,
you CAN read one extra fire button. (The "B" button is connected to the
normal fire button, so use it for games... But you can also program things
to check the "C" button quite easily.)

One game I know of that does this is my "Gem Drop" puzzle game.

http://www.newbreedsoftware.com/gemdrop/

Speaking of that game, BTW, any Linux/UNIX users who like Gem Drop,
a new X-Window version of the game, "Gem Drop X", was released a little
while ago!

3837. I kinda want this newsgroup to split up :)

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-22 00:00:00 UTC
From: nbs@sonic.net
Message-ID: <7fm846$18l$4@ultra.sonic.net>
Source record: 52948

When I come in here (which is rare), I find myself skipping through at least 50% of the posts, as they're all "FS:", "FT:", "WTB:", etc., which, not being much of a hardware or software collector, are of little interest to me.

Perhaps we need a "comp.sys.atari.8bit.commerce" newsgroup?

Or, is it just me, and I should shut up and go do something useful for once? :)

The Diamnod cart, SDX and the express cart are of the same type. They
have a PAL and a rom (Eprom). The difference is how the PAL is
programmed and of corse the rom. It is done this way so the hardware
registors of each cart do not interfear with each other. Do you have
the PAL code as well???

Although I don't have a 1050 in front of me to see what voltage is applied to these caps, I can say fairly confidently that it isn't high enough to "fry" you. And for the sake of argument, you shouldn't feel overly confident handling capacitors on a system that is unplugged.. The whole point to capacitors is their ability to STORE charge, after the potential applied to them is removed.. (in other words, its like a battery!)

Does the bidding history link not record ALL the bids? There was nothing
between $97 and $333. It makes a little more sense if there were
intermediate steps. I'm still betting on my hunch that this auction won't
get paid.. If it does I've got some full-size arcade games I'll sell the guy
for $2000 each.. :)

3856. The Fuji Equation

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-22 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7y4sm8zj63.fsf@co.umist.ac.uk>
Source record: 52967

Hi all,

This is something that I've had in the back of my mind for many years (mostly during high-school math classes), but have never seen information about, and I've finally decided to do some digging on it, see what comes up.

The Atari fuji logo is well know and loved by all, but is a pain to draw and get it to look right, especially the curved swishes down the sides (the centre line is a doddle ;). One thing I've always wondered but never had the knowledge/time/experience/inclination to figure out is if the swishes could be represented and drawn with a mathematical equation. They look to be the sort of shape that could be created with some kind of quadratic equation, or maybe with 2 quadratic equations (one for the inner edge, and one for the outer edge). I figure having such an equation would make drawing the fuji, especially on a computer, a lot easier.

So does anyone know if there is a mathematical equation that will define (or at least approximate as near as makes no difference) the curved sides of the Atari fuji? Or failing that, are there any mathematicians amongst us that would be willing to calculate it (if it exists)?

spearsk@mc-mc.com asked:

<>

No. The bidding history only lists the last bid by a person. I guess that's why you thought the price jumped from $97 to $338.

<>

Well, I've dealt with the second highest bidder before. He's a nice guy from France. The high bidder only has a feedback rating of 1, so I don't know if he is a reliable guy or not.

3860. Re: Moving from ATR to Atari 5 1/4" disk format

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-22 00:00:00 UTC
From: Erhard Puetz <erhard-puetz@kdt.de>
Message-ID: <371F6E3C.5C6F7C52@kdt.de>
Source record: 52971

Hi,

IF the image is of type ATR
strip off the 16 byte ATR header
ENDIF

IF the ATR image is SD or MD (130K or less) than

- write remaining data to 1050 disk sectors.

ELSE

things get a bit complicated. There are several storage methods used
with DD disk images.

1)
- Sektor 1 (128 Byte)
- Sektor 2 (128 Byte)
- Sektor 3 (128 Byte)
- Sektor 4 (256 Byte) ...

(File is 384 byte too short for a real disk)

2)
- Sektor 1 (128 Byte)
- 128 Leerbyte
- Sektor 2 (128 Byte)
- 128 Leerbyte
- Sektor 3 (128 Byte)
- 128 Leerbyte
- Sektor 4 (256 Byte) ...

3)
- Sektor 1 (128 Byte)
- Sektor 2 (128 Byte)
- Sektor 3 (128 Byte)
- 128 Leerbyte
- 128 Leerbyte
- 128 Leerbyte
- Sektor 4 (256 Byte) ...

hexdump the file and try to find out what's on, then extract the data.

ENDIF

NEW +++ NEW +++ NEW +++ NEW +++ NEW +++ NEW +++ NEW +++ NEW +++ NEW +++ NEW

Atari File Management (AFM) will support all three file types in the
near future. You have to

- get AFM http://www.hcrburk.de/
- get a SIO2PC cable
- move the data from ATR file to 1050 using a simple sectorcopier.

Regards

I simply didn't think of the option to directly load a file.
I thought you booted Atari DOS and then loaded a game - which doesn't
work in case the game requires a MEMLO below the DOS margin.

Some of the people that are posting FS could use a bit of guidance. For instance, you will see 3 posts like:
Post #1
FS: Atari Joystick
Post #2
FS: Atari Basic Cart
Post #3
FS: Atari Basic Manual

All from the same seller.

The FS in the header is good for people that want to filter the posts out, but even if I feel like buying something, I don't want to open a dozen posts to see a dozen different items, all from the same person.

I have had some 1050 units with broken leads on the voltage
regulators. They are mounted on the aluminum cooling plate. If the
leads are soldered into the board, they get hot and get longer. After
cooling down, they shrink again, causing tension. That is why these
should be bent a little before soldering them in. When they are
straight, they cause strain on the board and the leads, causing them
to break, or pull themselves loose. If the leads are bent a little
zig-zag shape this problem is avoided.

3867. FS: CX2600-A (aka 2600 video game system) - US only

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-22 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <19990422172203.13722.00000153@ngol01.aol.com>
Source record: 52978

I have the following for sale:

Atari CX2600-A video game system which includes the power supply, TV converter box, 2 dcom 400 joysticks (in original boxes), 2 sets of paddle contollers, 21 game cartridges.

The games are: Pole Position, Combat, Star Raiders, Haunted House, Ms Pac Man, Video Pinball, Circus Atari, Warlords, Centipede, Yars' Revenge, Video Olympics, Pac-Man, Berzerk, Asteroids, Space Invaders, Laser Blast, Pitfall, Zaxxon, Donkey Kong, Donkey Kong Jr., Sears TeleGame 3.

I don't have any manuals or boxes for any of this except for the joysticks.

The game unit is in working condition and clean. All of the game cartridges are in working condition, but most look well used and some are missing the end labels.

If interested, please send your offer to gwestndrf@aol.com.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

The following manuals are available to anyone who wants one, two or
all. Their alternate home is my town's recycling plant.

Atari Basic Reference Guide for Experienced Programmers,
S.A.M. The Software Automatic Mouth from Don't Ask Software
Delta Drawing from Spinnaker
Kinder Comp from Spinnaker
Snooper Troops Case # 1: The Granite Ghost from Spinnaker
Magic Dump User's Manual (Preliminary) from Gemini
Atari Disk Operating System Reference Manual DOS 3

Email me if you are interested.

3870. Atari Light pen hardware

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-22 00:00:00 UTC
From: zantec@my-dejanews.com
Message-ID: <7fobur$fp6$1@nnrp1.dejanews.com>
Source record: 52981

There is either 1)A ROM routine in the Atari or 2) a chip inside the Atari that calculates and stores the current position of the light pen in:

LPENH and LPENV (locations 564 and 565 in memory).

Is it a ROM routine that stores the numbers there? Could someone please send me a copy of the ROM disassembly (I assume there are books that have this)

Is a ROM disassembly available anywhere on the internet? I've looked all over.

If it is NOT in the ROM, there must be a chip that stores the Horizontal and Vertical positions of the LIGHT PEN.... I suspect that it is a hardware feature because of the speed needed to calculate.

I'd probably need a hardware reference to figure that out...Does anyone reading have a Hardware reference? I want to find out WHICH CHIP takes care of calculating the Light Pen position.....

Also.... The Atari 2600 VIDEO GAME system has the ability to use a light pen (with the game Sentinel)....Will my Atari 2600 have the same chip in it?

If you have a book with Atari ROM disassembly, or a Hardware Reference, Let me know because I would like to buy it.

Thanks

Bill,

I can sympathize, but consider this.

You'd like to have all the want-ads in another group.

Contributor B might want all the emulation messages in another group.

Contributor C wants all the game talk in another group.

Etc., Etc., Etc.

I think you get the point.

I did try it with SDX. It seemed kind of faster at first. But when I tried
out the warp speed copy program it comes with, I realized SDX definitely
wasn't enabling it. BIG difference.

I believe I have the rev 7.1 software.

Hi,

>There is either 1)A ROM routine in the Atari or 2) a chip inside
>the Atari that calculates and stores the current position of the
>light pen....

No ROM routine, it's done in hardware by ANTIC/GTIA.

>....LPENH and LPENV (locations 564 and 565 in memory).

These are the OS shadow locations, hardware locations are $D40C and $D40D.

>Is it a ROM routine that stores the numbers there?

The OS reads the hardware registers and copies their contents to the shadow
locations during VBIs.

>....there must be a chip that stores the Horizontal and
>Vertical positions of the LIGHT PEN....

The way it works is that when one of the joystick trigger lines is pulled low
Antic(?) stores the current value of it's internal horizontal colour clock
counter in PENH ($D40C) and the current value of VCOUNT ($D40B) into PENV
($D40D).

Be aware that on the original 400 & 800 the light pen hardware was not reliable
unless you plugged the pen into controller port 4 - it was supposed to work in
any port but didn't. Can't comment on XLs or XEs.

AFAIK there is only one storage method. Method 1) - first three sectors
$80 long. Others are invalid images, nothing else.
And should be reported as invalid. Maybe fixing utility should be
written and advice about fixing such file should be given to user. But
supporting such broken images doesn't sound good for me.

See my formats page for ATR & XFD descriptions (too short, I think).

I have looked at this and found the light pen would work in any port
on the 800 and port 4 only on the 400. The circuit diagrams for each
confirm this. The light pen workes in either port on XL and XE

In article <37110eb8.43557780@news.freeserve.net>, L.F.Deans
<l_deans@bigfoot.com> writes
>and self confessed Anorak and Nostalgic.
Then you should get involved with the Sinclair stable - I mainly support
the QL.

BTW the Amstrad floppy is 360k!
I recall the NVR ram has some config items - NVR.COM is run I think
(trying to remember back to the 80s).

Amazing concept - a 650mb HD (and even 4gb) in a steam 1512.
How on earth could one fill it! Ah yes - Windoze. 2.0 worked - in
'real' mode I think.

I still keep mine as a 5 1/4 disk copying machine, and it runs my
Omnipro prgrammer just fine, but slowly...

I have THREE. The latest 1640 I found in a tip (complete even with mouse
and kbd) with a sticker saying 'not working'. It was of course.
It is the only computer my wife will use!

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I
find it hard to keep up with NewsGroups.

I've been working hard on adding more Atari stock to my inventory. I
wanted to have everything in place by April 15th for those of you with
Tax refund checks. Still, I've done pretty well. I'm having a "Come
spend your Tax Refund in my store event!" I have NEW Atari ST SoftWare
for sale! These $15 titles are marked down to $10. So even though the
*NEW......$15 ST Software says $15, it's really $10. Each one is "*NEW"
and most are ShrinkWrapped! You'll find these titles in my ST SoftWare
Catalog. Feel free to take my Catalogs and see what new HardWare,
SoftWare, Books & Accessories I have for the Classic Atari 8 Bit and
Atari ST.

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-
Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at
http://www.atari.benjamin.net And Jump to my FTP site linked to my Web
Site so you can Download Free Catalogs or FTP directly to my site at:
ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way,
Feel free to Request catalogs through E-Mail. Really, it's not an
inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both!
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail.
Please let me know if I can attach text files to your E-Mail. Catalogs
are just regular ASCII text files so you can download them into your
text editor and view them, edit them or print them out! It would make
things easier for me if you take my Catalogs, load them into your text
editor, delete what you don't want and E-Mail me the rest! To expedite
things, include your complete Mailing address so I can figure your
Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or
bensmith@teleport.com. If you can't reach me at benjamin.net see my
E-Mail/Web info in my Signature at the Bottom!

Did you run it under Win95/98/NT? I could ONLY get my cable to work under Dos 6.2. It would sometimes work under Win95 DOS but was very picky. If you get it to work write down the sycn # it picks. YOu can then run it again with that same #. I can't remember how to do this since I ditched the Xformer crap for more workable software/hardware.

Get SIO2PC cable instead.

Call me a die hard, but It'd be cool to actually do this on an Atari 8-bit =)
Given an equation, it would be relatively easy to create a logo of
just about any size, in just about any graphics mode, on the 8-bit itself.

Here's a Dejanews thread from rec.games.video.classic from a guy who recently discovered a halfway professional game he wrote that never got published and now he's wondering what to do with it:

http://www.dejanews.com/[ST_rn=md]/viewthread.xp?search=thread&AN=469065430&svcclass=dnserver&frpage=threadmsg_md.xp

The good news is that he wants to release it public domain...

It's a good idea, although I would suggest calling it
comp.sys.atari.8bit.marketplace, which is how such newsgroups
are typcially named.

Starting a new newsgroup is a pain. Who's up for doing the RFD/CFV thing?

The lack of BBS users in general (due to the net) is part of the reason
there are no BBSes around these days?

Who wants to call all the way across the country to download something or
chat with folks when anybody and his dog (almost <:^/) can get on the
net and do it like this (newsgroups, WWW, FTP)?

I'm not saying it isn't sad, but that it's probably not just an Atari 8-bit
BBS trend.. just a trend.

NEVER! How DARE you suggest that!!!!

;)

Yeah, it could've been. I don't think it was a Sega brand pad, so it
was probably built not-quite-to-specs, so it was either broken, or it
was made in a way so that it just BARELY would work with a Sega system. :)

If you intend to post a URL, it helps to actually include it.

Duplicating your text in HTML is a waste of bandwidth. Further bandwidth is
then wasted by the (valid) complaints, such as this, which doing so
inevitably attracts.

Some of us prefer newsreaders to newsbrowsers.

Percom, drive for L H White. What he has is a single density Percom, which I have seen attachment board to convert it to Double Density. I do not have one available to relate the specifics of the board but he did ask in e-mail, about the 1770, the Percoms I have use a 1765, for double density on a modified board. It is completly different from the hoard he has in his drive. As to an upgrade I am sorry but I personally do not think it can be upgraded to D/D without and enormous expense. I will sell a Percom capable of D/D and 3 slave drives for $25.00 shipping included.

The percom will actually do a 3 1/2 720k disk formated with saprta dos. Have not tried the newer drives by cogering the H/D hole, but as time permits may get into it.

Source record: 52872

I just picked up about 10 of each Atari 800xl, Atari 1050 Disk drives
5ea Atari 130xe. These computers and drive came from a school. I will
test each out and gurantee them for 30 days. However they are not
cosmeticly accepatble. You take the computer case, disk drive case and
suppend it in a bucket of bleach to render it comsetic accepatable to
you. Some of the drive cases or the comouter cases may be missing the
chrome strip. But each will function to your needs. If you have a
craped out computer or drive then this is your chance. I am open to
offers. Shipping on these with power supply and sio cable comes to
about
$8.00 so be sure to include the shipping in you offer.

Some may be missing the chrome..just to be honest with you.

I don't know the answers to any of those questions, Bill. What do we need to put out another issue? We have sufficient material except for the 1200XL nut in the corner - he isn't ready - as if you can not have an Atari Classic without some kind of 1200XL hack..... Having print-ready pages would be a start. I can do a reasonably good job of production (I think).

Bob

and, I think that the Sun is going to "come to us" before our orbit deteriorates....

Source record: 52874

Hi,

I once tried this cable. It didn't work. So I took my skope and
attached it to data in and data out, then restarted.

I saw the initialisation, where there is a command retry starting at
a very high frequency with the frequency decreasing. After some seconds
there was an answer on the other line, but the command's frequency
continued to decrease and at some point the answer disappeared
again.

It seemed as if the computer didn't notice the answer.
I did not found out what was wrong and stopped the project.

Regards

> I kinda like it with arc and all built in, more configurable, etc...

Yes, it had some nice things built in. But it had some built-in bugs, too. And it is a bit more unvariable than the disk based version - there was only little programming info for SDX available and even if you would have managed to replace the built-in buggy commands - you would have almost all commands external so that the cartridge version wouldn't have made sense any longer.

TAKE CARE: SDX has a bug in the RD (delete directory) command. In stead of resetting the directory free area pointer it sets the data area pointer to that point so that with the next file written you fill the reserved for directory area. This does not do true damage but will result in a directory spread all over the disk - thus slowing down access considerably.

And there are more bugs ...

Regards, Erhard

3910. Empty Mails ...

7fd665$573$1@wanadoo.fr...
> Hi all,
>
> Who can tell me how to load a game in tape ?
> Is the good command ?
> LOAD "C:"

What type of game are you loading? There are several (well, three) loading options: If you program yourself and store your (BASIC-)stuff with "SAVE C:" to cassette, then you will have to "LOAD C:" to work with your program again after switching of power. If you have "listed" your program to cassette with LIST "C:", then you will have to ENTER "C:" to recover (uncompressed saving, great for backups!)

But most commercial games are saved in binary format. You will have to push the START-button while switching on the computer. This will cause the 2-times beep and with a keystrike things will go on. If it is a binary game but does need the BASIC to be turned off, you will have to hold down START and OPTION (I think it was OPTION?).

If all that does not work, try to forward the cassette in a cassette-player, till you hear the first tones. Stop the tape immedealy and try (all) loading methods again.

And if it still does not work it is possible, that the tape is corrupted (some ATARI 1010 or XC 12 are great in these!). Perhaps it is helpful, if you copy it with a double-cassette recorder on a quality (my choice BASF) tape.

> Thank you very much for answer.
> Is it possible to change a PC into a 800 XL.

Not quite the same feeling - but a great thing to see a PC become a computer! There are many emulators, see the homepages and various newsgroups.

It was not dup posted-- just html.

> Further bandwidth is
> then wasted by the (valid) complaints, such as this, which doing so
> inevitably attracts.
>
> Some of us prefer newsreaders to newsbrowsers.

....

Sorry about that-- was wondering how the html posting would 'fly'.

My reason for not posting the URL is that it is very long and, for
many readers, would need to be cut and pasted to come up with something
useable.

An alternative to all this is to say: Go to Deja News and do a power
search for "contest" in the subject title of posts to comp.sys.apple2
during the span: mar 1 1999 through apr 22 1999.

You appear to be unaware that the web browser strips all the HTML crap out of the post and prepends the plain text version (generally *very* badly formatted) to the top. This is duplication. And it's evil.

: > Some of us prefer newsreaders to newsbrowsers.

: ....

: Sorry about that-- was wondering how the html posting would 'fly'.

It fell out of the sky due to being overburdened with useless formatting directives.

: My reason for not posting the URL is that it is very long and, for

So? Some of us are actually capable of such things. Plus, if you don't wordwrap it, most URLs (although not that one with Messenger) are spotted as such in the plain text and are clickonable to launch the browser...

Erhard and Vinnie,

Are you using a PC, or did the recipient use a PC to do this? Is the
Melissa Virus or some variation involved?

If so, it will do no real harm to your equipment. It will not affect you
unless you run Microsoft Word or Office. But it will send e-mails to the
first fifty people on your address list every time you send something out.

3925. Help with Atari 400

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-24 00:00:00 UTC
From: jcditz@tardis.svsu.edu
Message-ID: <7ft18cega1@nnrp1.dejanews.com>
Source record: 52891

I recently bought an Atari 400 over Ebay auction and I can't get the thing going. It didn't come with an RF switch, so I'm using the switch off of an old Atari 2600. The switch is perfectly functional with the 2600, but when I put the 400 on it and power it up, all I get are wavy lines. The system is getting power (the LED comes on) and I'm sure the Atari and TV are on the right channel. The TV is getting some sort of signal, but its not anything meaningful. Sometimes its just wavy lines and other times its a blank screen with a few white spots of snow moving around at random. So heres my question:

Should the RF switch off of an Atari 2600 work on an Atari 400? If not, what type does the 400 need, what are the specs (I'm sure radio shack has something comparable).

Jason Ditz

Evidently, whatever sort of reader you are using just dumps the html
source to you. That would, indeed, be messy.

Possibly the owner was a smoker? If you get a good cleanser, spray it with something like 409 to cleand it first, then wet it down again with the 409 and apply the cleanser, put it on a cloth (rag) that is also wet with 409 and rub gently should bring out the finish. Other than that take the whole thing apart place the case in a tub with some Bleach and let it set until it bleaches to the color you wish.

bob

After thought, computer cases, disk drive cases ect that have become grungy, can have the componets removed, and placed in a dishwasher with good results.

The RF switch is the same for any computer/video game but there is usually a slide bar on it that you move from TV to Game. I know you did move it to game right? Most Atari units are set up for chanel 3 but check the switch and see if it is set for 4???? Other than that you have a bad computer. Sorry..

If you do not have a Basic Cart in it then it should at least come up with Atari Memo pad. Blue Screen with Atari Memo Pad at the top.

bob

It has BASIC and 128K. If you get one with a good feeling keyboard, it's better than the 800XL. The 800XL's are nice, but as long as the keyboard is nice on the 130XE, I'd take that. Nice with a 64K RAM disk.

Hmmm, I looked inside and it doesnt look like it has been altered in any
way.
Could it be I need to reseat some chips to get the basic to work?

3938. Re: Help with Atari 400

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-24 00:00:00 UTC
From: rwoolley@pacbell.net
Message-ID: <372253AD.8E84E015@pacbell.net>
Source record: 52904

the switchbox is a passive device (which means that it does not have any transistors or ICs in it) that converts the 75 ohm Atari coax output to a 300 ohm TV twinlead input. in the old daze, TVs were 300 ohm twinlead (a flat 2 conductor ribbon cable). Now, almost all TVs are 75 ohm coax (for the cable TV hookup). Bottom line is: you do not need any switchbox at all - just get an RCA female to F connector adaptor at RadioShack. The Atari is RCA male and your TV is probably F conn female. If, by chance, your TV is 300 ohm twinlead (has two little screws about 1/2" apart), you will also need a 75 ohm to 300 ohm transformer from the Shack.

Bob
... to answer your question, the 400 is probably not working if the 2600 switchbox does not work. there is a switch on the 400 that selects which channel it broadcasts - make sure it is where you think it is.

No; it displays the plain text version.

Here's part of the guilty article:

| Message-ID: <371FB968.452E6A8C@swbell.net>
| From: Rubywand
| MIME-Version: 1.0
| Content-Type: multipart/alternative;
| boundary="------------77AE8371E423F4045304E0C4"
|
| --------------77AE8371E423F4045304E0C4
| Content-Type: text/plain; charset=us-ascii
| Content-Transfer-Encoding: 7bit
|
| Fabrice Frances writes ...
|
| > Hi all, I'm back, still groggy with time difference but anyway...
| > What it is that Rubywand and Whiteflame are both right about ?
|
| There was some question about the size of the Microtan. The current
| version is
[snip]
| You can view all of the messages on Deja News via this ---> link.
|
|
| Rubywand
|
|
```

```
| --------------77AE8371E423F4045304E0C4
| Content-Type: text/html; charset=us-ascii
| Content-Transfer-Encoding: 7bit
|
|
|
```

etc.

I normally see just the plain text, along with icons representing any attachments - and Messenger Pro deliberately treats multipart/alternative as multipart/mixed. MPro will also "display all" as if it was a MIME-unaware news/mailreader.

>>>> Some of us prefer newsreaders to newsbrowsers.
>>> ....
>>> Sorry about that-- was wondering how the html posting would 'fly'.
>> It fell out of the sky due to being overburdened with useless formatting
>> directives.

> That's too bad. It looks really nice and compact on a PC running Netscape.

Not really relevant...

> Plus, to see the listing of contest articles from Deja News, you just need
> to click on the highlighted word "link".

Which isn't much help when you're viewing the plain text version...

>>> My reason for not posting the URL is that it is very long and, for
>>> many readers, would need to be cut and pasted to come up with something
>>> useable.
>> So? Some of us are actually capable of such things. Plus, if you don't
>> wordwrap it, most URLs (although not that one with Messenger)

Messenger Pro neither...

>> are spotted as such in the plain text and are clickonable to launch the
>> browser...

> Cool! Here is the URL:

> http://www.dejanews.com/[ST_rn=ps]/dnquery.xp?ST=PS&QRY=&defaultOp=AND&DBS=1&format=terse&showsort=score&maxhits=25&LNG=ALL&subjects=contest&groups=comp.sys.apple2&authors=&fromdate=mar+1+1999&todate=apr+22+1999

Much better. And launchable from the Zap window in which I'm entering this text. :-)

Yes, I could have extracted it from the raw HTML. But the point had to be made, so...

BobKlaas (bobkla19@sisna.com) wrote:
: SHUT UP? I personaly do not think so!

Heheh :)

: What are you looking for when your approach this area? Do you have a
: problem, sepcific to computer, drive ect.

What do >I< look for in here? News on new Atari 8-bit happenings
(software, websites, expo's (whee!), etc.)

: If so there is not a problem just skip the b.s on the area and send a
: new message to the group, stating your needs.

Well, when I don't come in for a few months, I end up having to skim through
every subject of 100's of new posts. While the ones which are actually
titled "FS", "WTB", etc. are obvious skippables, there are many which
are titled things like "stuff" or "Atari 8-bit books", which (1) aren't
sorted amongst the other alphabetically sorted "FS", "WTB", etc. messages,
and (2) which I can't tell are for sure a meaningful message, or just
a for-sale post.

: It only takes a few seconds to scan the messages here and reply or add
: to your specific needs. One does not have to read every message, just
: mark them read. I do it all the time. Will answer when someone hits my
: area of knowledge and bypass the others.

Well, that's what I do, but I'm finding the FS-to-interesting-post ratio
is about 50-50, although others have argued otherwise.

From the responses I've seen so far, the vote seems to be 3 or 4 for splitting
the newsgroup, and 7 or 8 against. That's what I wanted to see - responses
to my original suggestion.

Thank you for yours. :)

I can live... I'm trying to read c.s.a.8 nearly daily now, and it's alot
easier to skim through 30 new headers than 300. :)

-bill!

Not an Atari vs. Commodore flame war, because Atari never made monitors for the 8-bits, and everyone knew Commodore monitors were good. I have a 1701 on my Atari, and a lousy IBM 8503 mono VGA on my PC.

Net-Tamer V 1.08X - Test Drive

3948. 130XE's video worse than 800XL's?

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-25 00:00:00 UTC
From: Olav Woelfelschneider <wosch@cardware.de>
Message-ID: <u2rvf7.et2.ln@hex.athome.de>
Source record: 52792

I own an 800XL and a 130XE. While the 800XL produces a slick clear video on
a Composite Monitor, the 130XE's picture contains lots of artifacts.

It looks like intensity variations in vertical lines. (Duh, hard to describe).

I wonder, is the 130XE simply defective or has it a broken design compared to
the 800XL? (Isn't the 130XE just a souped up 800XL?)

These are both PAL machines. To get color from the 130XE in the first place,
I had to adjust that pot an the computer's board nearly all the way to one
end. Guess that means the machine has a defect or two.
What does this pot do, technically? (I roughly know how PAL works)

In it's glory days, the 130XE was run with a green monitor, so it might have
been broken for a long time and nobody noticed.

TIA,

Zap! The Rise and Fall of Atari by Scott Cohen
This book, written in 1984, details the rise and fall of Atari, Inc. As
we know, Atari held on for a few more years, but was never the same.
This book details insider stories and the rise of Atari's fame in the
videogame marketplace.
This book is hardbound and in PRISTINE condition! It is highly sought
after by Atari collectors and will make a great addition to any Atari
loyalist's bookshelf!
Here are some scans of it:
Front: http://www.concentric.net/~mbates4/Zapfrnt.jpg
Back: http://www.concentric.net/~mbates4/Zapbk.jpg

It is currently for auction on eBay. Starts at $5.00 with NO RESERVE

Here is the URL for the auction:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=96136069

Shipping is $3.50 for US, International bidders, contact for prices.
Items will be shipped via USPS. Insurance is NOT included and is $0.80 extra.

Money orders/checks accepted.

Checks will be held 7 business
days before item is shipped. Money order ships the same or next day.You
will have 7 business days to make payment.
Thanks for bidding!

Hi Mickey,

First off, there are no dumb questions, only dumb people or dumb answers, ok here's your answer (dumb or not :) All Atari computers from the Atari 600Xl, 800Xl, 65XE, 130XE, 800XE, XEGS all have built in BASIC so your set with that. The only Atari 8bit systems not to include BASIC built in were the Atari 400, 800 and 1200Xl.

Curt

Atari 1040STe with 4 megs ram and a flakey diskdrive comes with mouse and
a color monitor if you want it..........
Make me an offer on the package or split it up I don't care....zip gets
shipping charges.
I also have a 520STfm with a flakey diskdrive but the unit works good, no
mouse....make me an offer.
B&W Atari Hi Res monitor works good make me an offer
its your choice. need to clean out the closet. e-mail please and thanks

But where o where are the developer notes for Cartridge development? I can see that an 8 or 16K cart is straight forward enough, but can someone put together a document explaining the bank swapping carts (e.g. BallBlazer), including PCB layout and recommended part list?

Thanks,

Mark.

Please reconsider your mailing opinion, IF you have Ultra Dissembler by Ralph Jones, distributed by Adventure International about 1983-84. I'll pay whatever reasonable price you offer for this one piece of software. Thanks.

Source record: 52924

I'm curious. On ebay, 1200XL's tend
to bring higher prices than any other
Atari model, maybe except the 130XE,
and even that would be arguable. Can
someone enlighten me as to why
these would be so popular? Ok, there
were fewer of them made, so they are
"rarer" from that standpoint, but they
are arguably one of the least desirable
for use - good keyboard, but not a lot
better than most XL's; really bad video;
no PBI; BIG (could be a plus or minus);
had extra function keys (a plus?); no
built-in Basic; etc.
Certainly most of its "faults" can be
fixed with upgrades, but there must be
some "pluses" I'm missing. What gives -
just people looking for rarity, or?
Larry

****3DOMAN Says:****
I'd have to agree with you, dude, I personally am gettin tired of all these ads, I thought a while back an investment firm had purchased a large amount of trackballs and were selling them for like a buck fifty each, but you had to buy a certain quantity or something....
They're not really worth making a fuss over...

If the item is super-rare, odds are you're not going to see it on eBay, but a REAL auction house or possibly a classic gaming convention, I've been looking on eBay for over a year now and I have yet to find anything spectacular, and don't even get me started on the idiots that post EVERY SINGLE ITEM they sell as rare, I mean, c'mon!

I can't believe how many times I've seen common stuff like Mario 1 for NES and Pacman for 2600 be listed as "RARE!" eBay should have some sort of policy against that as well as grading, I'm starting to get annoyed by the people that claim something is mint when it's missing packaging or instructions, by definition mint would be still sealed and unopened. I still look on eBay for rather common stuff like out of print videos and related items, and I do like SELLING stuff on it, as it really is a seller's market... But all in all, most of the games for the older systems aren't worth buying when a person requires you to pay $4.00 shipping on a five buck NES cart and it pretty much blows any money you were saving over going to the nearest funco or flea

market. I say, for the real bargains, get off your soft, swivel-chair ass and go to the nearest Flea Market or group of garage sales, with everything obviously listed for what it is, there's almost zero chance of finding something rare without any competition and at least at a flea market, the person might not know what the value of the item is, but on eBay, if a person knew enough about it to pay the fee to post it, they're aware of what it is they're selling.

Anyhoo, I've babbled on enough here, it's like really early in the morning and I need sleep.....

I guess it's the fact alot of people have heard of 400's 800's 600xl's and 800xl's but since the 1200xl was not produced in as great numbers as the rest, These people think they are RARE well the reason they are RARE is the reason you pointed out No Real Atari User wanted them.
I'm one of the few that love the 1200XL. I wish i could get my hands on 50 or so of them just to do all the mods on and have nice machines.
my favorite is to remove all the 9vac connector and power stuff and replace it with the stock 5vdc supply like an 800xl,600xl this gives you loads of room in the case for some very nice upgrades like the TTL video one and the SIO2PC to name a few including bob's 1200xl PBI and My SBC 386 which adds a PC Inside the Case I use an old MAC Pizza Box Power Supply Internal and 2.5 Inch IDE and 1 3.5 Inch Floppy All Internal Kinda Really Sweet Machine That Way.....

Thanks
Edward

Generally, I go to the hadware store and get the flex-stone paint. Usually the grey/black variety. You mask everything off, and apply. This gives the monitor a superb finish, and unlike regular spray paints, flex-stone does not run. You end up with a nice textured finish. Usually the flex-stone kits come with a clar coat as well for even better durability.

I just think the 1200XL looks cool. but now that you mention it, it might be pretty cool to fill up the extra space inside with mods. The PBI mod sounds especially fun.. Does this give you a PBI port just like on the 600/800XL? I got a 1200XL a while back, but the video was all screwed up. Anybody got a good motherboard they'd sell, or a whole computer that's pretty beaten up?

All Netscape is doing for you is allowing you to create an HTML reply
and then sends it as a MIME message. The first part of the MIME
message contains the plain, unformatted text and the second part
contains the HTML code that Netscape created when you composed the
message.

This means that my newsreader will just show both parts in a single
message because it doesn't bother looking for MIME messages.

By the way, regardless of whether people's newsreaders actually
display only the text or HTML version of your message, everyone still
has to download both parts of the message and all the news server
still have to store both parts. So your nicely formatted messages
will still take more than twice as much server space on all the
servers it sits on and take more than twice as long to transfer
between servers and to download. All that waste and it is pretty
likely that a lot of the people who read it won't even see the nice
formatting.

Seems like a waste of bandwidth to me but then that is only my
opinion. Besides, if I ever get around to writing a newsreader for
the IIgs I'll probably add the same ability I'm planning to add to my
e-mail client. A way to send formatting with the message but it will
be done in a much saner way that won't more than double the size of
the message and give other clients the message twice. :-)

Thanks to everyone who replied either here or by email, I really appreciate it. Unfortunately, I did open the 400 up, and one of the Capacitors is no longer attached to the place where its supposed to go, its just loose inside the case. Well... no wonder it didn't work right!

Thanks anyhow.

Hey Larry,
as far as I know there weren`t any PAL 1200XL`s, so at least the 1200XL`s are rare in PAL countries, especially in Europe. But it depends on what you count as rare. Atari machines could be rare, if there were only some thousand (or hundred) made/sold. They could be rare too, if they were not sold in any special area, like the 800XE was never sold in America (it is not rare in Europe!), the 1200XL was never sold in Europe (it is not rare in America), and finally the 400/800 was never sold in Eastern-Europe (it is not rare anywhere else !) Greets - Andreas

Hi Paul,
try The Gatekeeper`s "MOD Player V1.22" it supports up to 48kb, thus playing mods of a length of 96kb... Or try "Inertia" by Madteam, there are XL and XE versions out. The newest Inertia player I know, supports up to 320k RAM (64k Ram + 256K Ramdisk). Unfortunately both players cannot play all different MOD versions out there... greets Andreas

P.S.: You can find those MOD players on the "Closer to Home" Homepage by Tom Hunt or at the Atari-8Bit homepage of the University of Michigan (Umich); or try some PD libraries (ABBUC, Page 6,...)

3988. Re: FOUND! Qb

Indeed, it is one and the same.
I released this program to MACE (Melbourne Atari Computer Enthusiasts) in about 1985. When I went back to ask them for a copy, about a year back, they didn't have one (!!). So, as I've said before - this game has already been released PD, but my year-long search for it on the 'net failed to find a copy.
Now that I HAVE a copy (and source code, too), my plan is initially to release it (the binary) PD through the site of the gent who is helping me convert it to PC format, and provide a small "professional" release which includes the source code and manual and floppy disk(s). And I'll do a write-up about its history, programming techniques and memories, etc (for the limited edition release). I have enough interest to make me consider about 50 copies as reasonable for a limited edition release.
Once it is PD (again!), of course, I'd like as many archive sites to host it as possible, but the materials in the limited edition will probably remain copyright and mostly only available in that release.
I might add that I have access to the homebrew utilities I used to create this game, too - my sprite editor, my sound editor... maybe someday I'll release those, too - perhaps in the limited edition :)
I'm glad that someone, at least, remembered the thing!
I expect to announce Qb going live... in about a week!
Cheers
A

```
There has been some delay due to a trip to the US, but
now the 1K 6502 contest should soon start. I'm having
a final round with eventual sponsors, and then it will
start for sure.

Please sign-on for the 1K 6502 programming contest,
it's all on http://oric.ifrance.com/oric/6502contest.html

(mirrors exist for US and UK users respectively if you
start from http://oric.ifrance.com/oric/index_english.html )

Now I wonder... where are the best active 6502
programmers ?
In the C64 fame ? the Apple2 world ? is there any Atari
or Acorn 6502 programmer left ?
Haha... we'll see 8-)

Best regards to all,

Fabrice
```

Actually, I'm now running a dual P2/450, 256mb SDRAM and two 10,000RPM Seagate cheetah 9.1gb drives under WindowsNT 4.0.

Just got tired of the PC stuff. I work on PC's, I play on PC's.. But really still have a soft spot (hole?) for the Atari's..

Not only that, but it sparks tons of conversations when folks come to my home, see my PC, then the Atari next to it.

They're not that bad, that I've seen.

I just won a bid on a complete 800 (I prefer the 800 to the XL/XE series) system - 800, 1050, 410, two Wico joysticks, about 16 cartridges, 5 tapes, and a slew of disks, plus original manuals and all cabling/power packs.

I paid about $230 with shipping. Not bad for a system, and it certaintly beats the a la carte prices on hardware I've seen.

I've only seen a single components going for prices like you describe - the 850 serial/ parallel interface. At those auction prices, I'd rather buy one refurbed from Best Electronics or Bravo Sierra.

And yes, if you have stuff that you don't want, auction it off. There are those of us who don't mind buying old hardware to place alongside our Pentium III.

That's pretty high. I've purchased an 800XL, 130Xe, 2 1050s, 1027, 6
joysticks, 8 paddles, 6 cartridges, and a bit more misc stuff for a total of
around $100. And yes, this was on eBay (I think it was 3 separate lots).

Die dulci fruimini.

Hello!

Still having to unload a lot of my collection- please have a look because
there is good stuff up there and I need the bids! A huge variety of classic
games items.

Go to:

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=full_closets

or to www.ebay.com and type full_closets into the search engine for sellers.

thank yo

Okay, my little Brain needs new input and I always wondered how the best
demos on an Atari 8 bit look like, as I'm a C64 and CPC rooted guy.
I'd be glad if you could mail me some hints where to get the best demos
and games, and what the best emulator, games and demos for an Atari 800xl
are.. I'd prefer an FTP-Site in western Europe..
Thanks previously.

I'm not sure if this is what you are looking for but a few years
back I made a fuji for my dads page in animated GIF format. If you need
something better i'm a lot better with my 3d now than I was then.

4008. Improving quality of cassettes, convert .cas files to .wav files

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-27 00:00:00 UTC
From: ernest@wxs.nl
Message-ID: <37261eaf.203903@news.wxs.nl>
Source record: 52747

I have written a program to convert .cas files to .wav files. The
.cas files can be created by the wav2cas program I wrote about two
years ago. You can record your Atari 8-bit cassettes to a .wav file
with a sound card. The wav2cas program extracts the data that is
encoded on the tape and stores it in a .cas file, which only contains
the actual data that is on the tape. This file is usually around 64K
in size. This file can be stored on the PC, and act as a backup. The
file can be loaded with an APE cable and the APE program too. It is
also possible to exchange files with other users, as long as the
copyrights are respected of course.
The cas2wav program I have just released will enable you to convert
these .cas files to a .wav file again. This can then be played back
through a sound card. The data can thus be recorded onto a cassette
tape again. This cassette tape can then be loaded with our beloved
Atari Classic computers with the help of the not so beloved cassette
units, like the 410, 1010, XC11, XC12 and such.
The cas2wav program allows you to write tapes at speeds up to 820
baud. This slightly reduces the time required to load these tapes.
Another advantage is that you can improve the audio quality of the
tapes. Sometimes commercial tapes are recorded with high speed
duplicators, which cause the quality of the recording to be reduced.
These tapes can thus be improved with the help of these programs.
The program is freeware. It can be downloaded from the Umich archives
and it resides in the following directory:

http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/

The file cas2wav.zip contains the PC executable program,
the 'C' source code, and the documentation.
The file wav2cas.zip is also still available in that directory.
Thanks to Bill Kendrick for helping me getting it up at Umich,
and thanks for maintaining the Umich site.
Thanks to Kevin Savetz for putting the schematics of the 410
on-line, as published in the Antic magazine. The digital Antic
pages are nice to have handy at

http://www.atarimagazines.com/

This version is the result of four months of experiments in my lab.
I am releasing it now, because otherwise I might never release it.
I am hoping that there are some more users out there that still like
to mess around with cassette tapes. Feedback is welcome.

Keep those 410's/1010's/XC11's/XC12's buzzing.

You people are insane!! I paid $5.00 each for 3 800xls in their original box. I also paid $3.00 each for 1050 s in their original box. 850 for $1.00 And SIO cables .25 cents each. Some of these people need to stop using their computers to due their shopping. They should take a walk or drive for us lazy people down to the thrift store. Theres tons of Atari systems out there that have been donated to thrift stores save one before it ends up in the local dump..

Don

If you like to hear about the old computer wars then you will probably like something I'm planning on putting together. A compilation of a continuing story that went on roughly around 1986 on a Atari BBS. It was a GI-JOE style saga of the Atari / Commodore war. And as I look back on it, it all took place before the ST/Amiga era!

But if all goes well, it will be disk based book (to read and print from a Atari 8-bit) with a percentage going to two Atari clubs.

More in the future ... ;)

4013. Sky High Bids for old Atari on Ebay (Give me a Break)

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-27 00:00:00 UTC
From: nospam@nospam.net
Message-ID: <37250673.41443136@news.supernews.com>
Source record: 52815

I have been in Atari since the 1980's when I got my first 800xl and I paid $269. Now I see 800's going for $315 and an XE for $176. This is absolutely crazy. The people on ebay need to read the newsgroup or at least shop around.
Actually if those prices stay as insane as they are, I will super video all my atari's, add a little ram, through a happy in on the deal, and in seven days of bidding pay off all my loans for college!!!!
I'm sure that would go for a couple grand!

I will get off my soap box now.

Thanks, Brad

4014. FS/T: Atari 8-bit computer items [04/26/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-27 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <37371639.8249541@news.nls.net>
Source record: 52816

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 04/19/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}

$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Loose cartridges, no box or manual:
$ 3.00 3-D Tic-Tac-Toe
$ 3.00 Alphabet Zoo [Spinnaker] -- no label
$ 3.00 Atariwriter
$ 3.00 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede
$ 3.00 Dig Dug
$ 3.00 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 5.00 Gateway to Apshai [Epyx]
$ 1.25 Missile Command
$ 2.50 Pac-Man
$ 3.00 Qix
$ 1.25 Space Invaders
$ 2.50 Star Raiders
$ 2.50 Super Breakout

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex
connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will
not boot up. Sold as non-working item, possibly repairable, for
parts only!

$ 4.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 9.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Wouldn't it be easier to get it on disk?

BTW..is there a version of it for the PC? It was my dad's favorite Atari game and he misses it dearly now that the Atari is in the closet. He keeps threaning to bring it out just to play Boulder Dash. Would love to get him a PC version.

I once seen bolderdash on a cart called RomBank. Some one hacked
bolderdash on to it. Don't ask for one. Cannot get them.

You are right. I had to get mine from the states. Was looking to
convert to PAL, but to much work required. No space on the board for
the extra crystal, chip etc.

I remember the one now. I got it from Mace quite some time ago. If
memory serves correct, There where some platforms that moved up and/or
down when they were jumped on. I should still have it somewhere in my
colection.

MACE is now a SIG of a Melbourne PC group. Mostly if not all ST stuff
now.

> The 1450 xld. I want one.
>
> James

If you like to pay the same amount in dollars for it, you may have a chance to get one ($1450). Really, the 1400XL and 1450XLD are hard to find, only NTSC machines were produced. The production amount was less than 100 units. Many have already broken down or found its way to the trash can. Besides, those machines are not only very expensive, they are only good for collecting purposes. Most machines missed some parts (chips, etc.) and cannot be used correctly. For example all 1450XLD`s I have seen, missed the Floppy controller platine, thus the floppy can`t be used... But even for collectors its a hard luck story to get one of those machines, some thousand people want them, wheras only 50-75 machines actually exist... Greets - Andreas

I had read a statement similar to the following a while back:

In early production runs, Star Raiders was actually called "Star Raider."
Since it was one of the first games available for Atari computers and
because of its popularity, neither version is particularly rare.

Can anyone verify if this is true? Please write me at:

hughfalk@mindspring.com

Thift store is places like the Goodwill,Salvation Army, Disabled Vets, council for the blind. and many more. At most of the stores they dont know what they have or care what prices is on it. The Goodwill and Salvation Army will lower the price of the item if you tell them that it is way to much for old technology.

Another good place for Atari equipment is at garage sales. Alot of the time you will find 5200 & 2600s in there original box with a ton of games for $10.

Im always on the prowel for a good Atari deal.

>Theres tons
>of Atari systems out there that have been donated to thrift stores save
>one before it ends up in the local dump..

I've seen a number of folks reference "thrift
stores". What exactly is a thrift store -
something like AmVets or Good Will?
The ones I've visited never had anything
except a few pieces of software, which were
usually priced insanely at $10-20 for a disk
game!

BTW- you can get some very good deals
on ebay - not $3 for a computer or a disk
drive, but certainly as cheap as at an Atari
Fair. The problem seems to arise when there
is a fairly uncommon item, and two "collectors"
decide they "have to have that" or when one
decides that he will make another pay dearly for an item. And lack of
knowledge surely enters the equation. I've seen people buy
"rare" items that you could buy new for
half the price from BEST or B&C.

Yes, this is 100% true. I auctioned a copy of Crystal Castles for the Atari 400/800 last year on eBay. I put the word "rare" in my title because the game isn't that easy to find and none of the online places like Best, B&C, or even Video 61 have it. I got an e-mail from Curt Vendel scolding me because the game "wasn't rare" and could be "bought new from any of the regular Atari stores." Well, I told him that none of these stores had carried the game for a long time and then I didn't hear back from him. I guess he felt he didn't need to bother answering my opposition to his claim. Anyway, this guy is supposed to be an authority on everything Atari, right? Not one day later, he was the winner of an Atari 400/800 In-Store Demonstration cart on eBay. He paid a ridiculous price for this cart and it was not even new! My point is... that Best Electronics sells this new in the box with the manual for $25. Go figure.

I think 'thrift store' refers to a Good-will or second-hand store. The pricing at such places depends on mamagement, and you will see stupidly high prices like $20.00 a disk game. However more stores will mark stuff cheaply. I picked up a 7800 with 8 games for $5.00 last week at the Good-will near me.

I have been surprised at what you can get for classic computer items on eBay. It is definitely a sellers market! I should make $30 or $40 reselling that 7800...

I've come across two more items that I am giving away.

Owner's Manual for Atari SX 212 Modem

Parallel Printer Driver for Atari version 1.1 from Macrotronics. This is the cassette version and is dated March 2, 1982. Since I do not have a cassette player I do not have a way to test this, so it is being given away as is.

Thanks to all who expressed interest in the last giveaway.

4057. Scott Adams

I've come across a cassette in the basement that I assume is Atari because it was in a box with other Atari cassettes. It is labeled ADVENTURE 0 "Special Sampler" Copyright Scott Adams 1979 Box 3435 Longwood Fl 32750. Can anyone tell me what this is? (Aside from the obvious - that it contains a sample of an early adventure game) I may be showing my ignorance - who is (was?) Scott Adams?

Scott Adams was one of the big stars of the adventure world in the late
70's/early 80's. His firm, Adventure International had a range of text
adventures (12?) and latterly some graphic adventures that were ported to
various machines including Apple II, Atari, TRS80 and others of that era.

By modern standards they are a bit lame but by the standards of the day
they were excellent.

I haven't heard of adventure 0 but I suspect it's some kind of sampler.

That gent at Radio Shack didn't know the POWER of Radio Shack. :)

Check out their ULTIMATE CATALOG under video games and you will find various 2600, 5200, 7800, Lynx, and Jaguar games and accessories there. No joke. I'm sure joysticks are in there too.

Joystick variations I've found since I got back into the Atari scene in Novemeber '98:

Sega systems.. the early system with the joystick looking 9 pin female connector. So far two styles have worked great.

Odsessey controlers can be easily rewired to work with an Atari.

Still wondering on other controllers. I know that Nintendo are NOT easy to convert.. but they're crap anyway. :)

Hehe.. Scott Adams rocked!

I remember the various adventures that he came out with.. Adventureland
#1, Strange Odyssey #6, The Count #5,
Savage Island #10 & #11... wow, those were the adventures!

The had a classic line that I still use...

"You can't do that...yet!"

Years later Infocom would intruduce in Zork a step above the Scott
Adams adventures by making complete sentences possible (the Scott Adams
adventures were limited in syntax.. so you had to spell the words and
phrases JUST RIGHT...) Of course, when Zork came out, so did the
GRAPHICAL adventures of Scott Adams, which was basically the same
adventures, but with graphical pictures. Really exciting.

(Anyone got any ATR's of the graphical Scott Adams adventures?)

Infocom... ahem... Infocom under Activision... would not try the
graphical adventures until the early 90's. Scott Adams? Early 80's.

Doctor Clu
-Who is currently thinking that converting Scott Adams games to
Z-script would be a cool idea. ;)

E-bay is wonderful!!

I shop there a lot of the time, when I'm not at Goodwill, Thrift Stores and dealing with local users. But I have to admit, that can be thin sometimes.
So yeh, the general rule on the E-bay... watch it for a while, bid the amount that you want to bid, and if goes higher than you would want to pay... let it go.

Rest assuredm someone will probably sell the same item in two weeks. More than likely the SAME PERSON who sold the SAME ITEM the last time. Afteral, most of the people who sell there are vendors slowly selling off their wares.

In THOSE cases, I find their webpage, and buy it at the SET VENDOR PRICE that they usually set it for, which is about half of what it gets run up on the E-bay. :)

And then sometimes an item that is worthwhile to you goes unnoticed... slips through, and is bought by you for $5.00 !!

It's a game, and if anyone knows how to play games...
..it's an Atarian! ;)

From: Darrel Davis <darreld@his.com>
Message-ID: <372753cc.0@news4.his.com>
Source record: 52774

After years of developing on the PC, I'm gonna start playing with the 8 bit Atari again. Fact is, back then computers were ALOT more fun than the P350 w/ 128MB running NT I work on at home.

I am gonna use it to teach my 12 year old to program. I have a box of about 100 Analog/Antic magazines with the BASIC and assembly source code. It should be a blast for us both.

After all of this time, I have a couple of questions though:

-I have questions about sharing peripherals (or at least disk image files) with the PC as well as ftp sites, etc. Is there an 8-bit FAQ with all of this info?

-I'm interested in buying a 130XE but not for what they currently are going for on eBay. Anybody want to sell one?

- Also will be interested in a MAC/65 cart and Action!. If anyone wants to sell these, let me know.

The best email for me is: darreld@his.com

-darrel

Wonderful little package that was released for the 8-bit and the ST platform, and looks like it was made in the Atari busy area of Dallas, Texas! Wow... I had no idea that Dallas was so big in the Atari scene until I looked back on it. :)

Yeh, a member of ours recently donated three issues to the club. these were disk based magazines. I have Vol 1.2, COL 387, and COL 287.

We had fun comparing the ST and 8-bit versions of the two magazines.. and of course, how they programmed the same issue. It was truly entertaining as we ran the test "How to know if you are a Martian.." on both platforms.

And true believers, there is one other faithful publication in the
United States that has gone on for fourteen years... AUNT BYTES, the
newsletter for the Atari Users of North Texas.

A fun monthly newsletter of roughly 10 pages that covers Atari news and
Atari community issues and humor. Just $12 a year!

Doc,

I thought this stuff had been converted to Z-script already. The Inform homepage may provide some clues on this....

http://www.gnelson.demon.co.uk/inform.html

I haven't looked for this stuff myself, since there are so many good text adventures available in the public domain.

Funn-ny! Back during prehistoric times (early 80's..) I just got
married.. then got my 400.. Spent more time with the 400, I think.. wife
wanted to kill me.. and the 'puter... I finally promised her I would not
spend any more time with that Atari 400!...
.
.
So, I bought an 800!!!

(I spend zero time at home with the PC..)

4077. ISO: Starfire Warrior game by Brian Fisher

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-28 00:00:00 UTC
From: nbs@sonic.net
Message-ID: <7g7nh2$u43$1@ultra.sonic.net>
Source record: 52782

I received this message via my XL Search site
(http://www.newbreedsoftware.com/xlsearch/):

1.Name: Brian

2.Subject: Question

3.Found: a FAQ

4.Message: I am in search of my lost work.

When I was quite younger, I programmed a 6502 game for the Atari 800. It was originally a called "Hellcat Warrior" then for copyright/legal reasons I updated it to a space game called "Starfire Warrior". It sold to DataSoft but for the legal reasons it did not hit store shelves.

My copy of it is damaged/unusable and have not been able to find it. I know it hit pirate circles there for a while but since it never hit store shelves I am having doubts about being able to find it. Any input would be greatly appreciated.

4083. 810 Disk Drive PROBLEM!?!

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-29 00:00:00 UTC
From: Bowling <mbowlin1@tampabay.rr.com>
Message-ID: <pvNV2.51$yH6.1872@newse3.tampabay.rr.com>
Source record: 52699

I have a problem (don't I always?). My 810 floppy disk drive booted up my MULE disk just fine earlier today, but...tonight I can't get the 810 to boot up *any* of my disks! I've tried about eight disks so far, so I think it's probably a drive problem. I get a solid "white" screen, with the occasional "grinding" noise when I try to load MULE. When I try to load other game disks, it seem that I get repeated "boot error" messages (also, the occasional "grinding" noise made, I guess, when the drive attempts to read the disk...).
Any ideas on what my problem might be? Bad floppy disks? Bad disk drive?
Thanks for any help or advice...

>Thanks,
>Hugh
>

I the early runs it was called 'Star Raider' on the cartridge only,
not the box. I bought my first one in Nov. 1981 (for $44), the box
and manual were labeled "Star Raiders" but the cartridge says "Star
Raider". I don't know when they started labeling the carts Star
Raiders, I bought one for a gift in '84 and by then they added the
's' on it.

Neither cart is rare. Atari made a ton of both, I see them all the
time for $.25 or less at flea markets. It's been a while though,
since I've seen one with the original box and manual (I still have
mine), which might be worth a little more, but only a couple of
dollars I imagine.

4087. FS: US: Atari 8-bit items_

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-29 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7g8via$crd1@news.ajou.ac.kr>
Source record: 52703

Greetings Atari folks,

Found a few Atari 8-bit items that I would be willing
to part with.
If you are interested in any item then you can make a
offer on it by e-mailing me at,
phantomm@kih.net

Here we go.......

Item # 1.

S.A.M.
The Software Automatic Mouth
by Don't Ask Computer Software
for the Atari 400/800
(I'm almost sure this will also work on
XL/XE machines with/without a 800 OS
Translator disk.)
Includes the Original Software Disk.
Original 40 page manual.
Also the Original registration card
which has not been filled out.
Original Phonetic Alphabet card.
And Original card that explains
how to use KNOBS which creates different
types of voice.
The manual and cards are in like new condition.
No Box.
Actually I have 2 original S.A.M. disks each has
a serial number. I'll have to check them to see
if the software on them is exactly the same.
Since the serial numbers are far apart there may
have been some changes.
I'll include both disks in this package.

For those that don't know, S.A.M. is a speech
synthesizer created entirely in Software.
You can add speech to your Basic or
Assembly-language programs.
A very good and unique piece of software
considering it was copyrighted in 1982.

Item # 2.

MicroLeague BaseBall disk collection.
Includes 6 Original disks and disk jackets.
No boxes or paper cards/manuals.
Disk 1. Box Score/Stat Compiler Disk
Disk 2. All-Star Rosters (across decades)
Disk 3. 1986 NL and AL Teams
Disk 4. 1985 NL and AL Teams
Disk 5. 1984 NL and AL Teams
Disk 6. Chicago White Sox

The original MicroLeague BaseBall game disk
is not included simply because I do not have it.
The Original disk was lost/damaged.
I am most sure it is needed to use any of the disks
above. However, I do have a backup of it if needed.

Item # 3.

Monday Morning Manager
The BaseBall Game
Includes Original Notebook manual
2 Original software disks.
One is labeled Master Diskette
One is labeled Alternate Diskette
Also includes some other paper work and
registration card. (Not filled out)
Like new condition.
No Box.

Item # 4.

Scott Adams Adventures
Package includes,
Original Adventure, Cassette and Disk
version, with Original package box/card
that includes instructions.

Value Pack that contains 3 adventures
on disk. Original disk and box/card with
instructions. Original disk includes,
Adventure 1. Adventureland
Adventure 2. Pirates Adventure
Adventure 3. Mission Impossible

The Official Scott Adams Adventure Hint Book.
Provides Hints for Adventures 1 thru 14.

Item # 5.

OSS Basic XL cartridge and NoteBook Manual.
No Box.

Item # 6.

MicroSoft Basic II cartridge with
extension disk. Original manuals
and reference card.
No Box.

E-mail your offer on any item to me at
phantomm@kih.net
I reserve the right to not sell a item or items
if I feel the highest offer is not enough.
Buyer pays shipping charges.
If you are really interested in a item it would be best
to think about how much you would be willing to pay for it
then e-mail the offer. Shipping will be 3 or 4 dollars per
item in the US.
If you have any questions on a item then feel free to ask.

Thanks,
phantomm@kih.net

4088. Atari 8-bit CD Rom and etc.

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-29 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7g8vir$crd2@news.ajou.ac.kr>
Source record: 52704

Greetings Atari 8-bit folks,

Was wondering if anyone has ever done a CD with nothing
but Atari 8-bit software on it and released it for sale?

If so, I'd appreciate any info about the CD, like who
made it, Is it still available and what kind of software
it contained.

I've not been keeping up with all the happenings in the
Atari 8-bit world in awhile. It seems that alot of folks
are using emulators on PCs to run Atari 8-bit software.
Can someone tell me what the most popular Atari 8-bit
emulators for the PC are?

Also, if someone was going to make a CD with Atari 8-bit
software on it only, would it be best to leave the software
in its standard ready to run format? Or should it be in
a different format and or Zipped?
I'm talking about Public Domain and Shareware software.
Basic, Assembly, Text files and such.

Do any of the Atari 8-bit emulators on the PC require
8-bit software to be in a certain format?

Also, I would like to somehow connect my Atari 8-bit
to either my STe or Falcon. I'd prefer getting it
hooked up to the Falcon so that I can move some of my
Atari 8-bit stuff over on the Falcons hard drive.
I have a 130XE and a 800XL with a 1meg ICD multi I/O
(MIO). I'd like to somehow hookup the MIO to the
Falcon and move files that way either through the
modem ports or parallel ports if possible.
Any help or suggestions on how to do this is
much appreciated.

Awhile back I found a Web page that had something
to do with connecting a Atari 8-bit to a Falcon
someway. The Web page was in German to the best
of my knowledge, I think there was some software
involved too. But I have lost the web address for it.
If anyone can pass along the address it would be most
helpful.

And I would like to get some ftp/web site addresses
that has Atari 8-bit software and etc. New software/
hardware as well as old stuff would be great.

Any help is much appreciated. You can e-mail me
at phantomm@kih.net

I think the main advance the Scott Adams games had was the fact that they
were coded in 100% machine language. Most text adventures at that time were
written in BASIC, or a BASIC/ML hybrid. I remember having a tough time
reading that "cursive" character set the S.A. games used. You could switch
back to the default char. set, but then the games looked really lame!

I have Empire of the Overmind and all the original packaging. I will try
to remember and dig it up tonight when I get back home. That, and the
other thing I was going to remember to dig up as well, if I can only
remember what that was.

Have you tried Micro Discount? From the vendors and developers list:

Micro Discount (Derek Fern)
265 Chester Road
Streetly
West Midlands
B74 3EA
England
tel: 0121-353-5730 (or international +44 021 353 5730) 4pm-8pm Mon-Fri
FAX: 0121-352-1669
mailto:101755.2443@compuserve.com
http://ourworld.compuserve.com/homepages/derekfern/
Vendor: new/used hardware, commercial software
Developer: Print Works (text processor for 1029 printer), Tagalon,
Tube Baddies, The Last Guardian, Zybex (in POKEY/GUMBY Stereo),
G.M Transfer Cable (SIO2PC compatible), 1050-2-PC Cable
MAJOR ATARI PARTS SOURCE

Not sure if that e-mail address still works, but the web page isn't there
anymore. They should still be contactable via telephone/snail-mail
though.

I had bought a no name sega joypad that had the turbo crap, and I
couldn't get it to work either. (Until I took it apart and rewired it!)

4103. draft guidelines for comp.sys.atari.announce posts

Newsgroup: comp.sys.atari.8bit
Date: 1999-04-29 00:00:00 UTC
From: Kevin Savetz <savetz@northcoast.com>
Message-ID: <290419991802075048%savetz@northcoast.com>
Source record: 52719
Cross-posted to: comp.sys.atari.announce,comp.sys.atari.8bit,comp.sys.atari.st

As the new moderator of comp.sys.atari.announce, I feel it is necessary to update the newsgroup's guidelines regarding what types of posts are appropriate. What follows is a draft of those posting guidelines. Of course, I welcome feedback regarding this document. After discussion of any issues that are brought up, the final version of the document will be posted. Please send followups to comp.sys.atari.8bit.

comp.sys.atari.announce began as a newsgroup intended only for hardware/software product announcements. Atari-related products are a rarity these days, which is one of the reasons that the newsgroup has languished in recent years. The focus of the newsgroup is widening to allow any news relevant to Atari computers. For instance, announcements about Atari Web sites and events are now appropriate.

Following this draft, I've included the original posting guidelines that were written when the newsgroup was chartered. I have tried to keep changes to a minimum, while expanding the focus of c.s.a.a and increasing readability of the document.

Kevin Savetz
savetz@northcoast.com

** Guidelines to posting to comp.sys.atari.announce **

comp.sys.atari.announce is a moderated newsgroup. In order to be approved, posts must offer news relevant to Atari computer users.

What kinds of posts will be approved?
* Relevant to Atari computers: 8-bit, ST/TT/Falcon, Portfolio, Atari PC clones, or clones of Atari computers.
* Topics may include software, hardware, Web sites and other Internet resources, events and other news relevant to Atari users.
* Commercial posts and press releases are acceptable.

What kinds of posts will not be approved?
* Any post that is not relevant to Atari computer users.
* For sale posts are generally not approved unless they come from a developer or dealer that wishes to announce new pricing or product. Sale or auction announcements from end users will not be approved unless they are, for some reason, extraordinary.
* Posts that are not informative.
* Posts that are not in English.
* Posts that aren't reasonably understandable (due to, for instance, significant grammar problems or spelling mistakes.)

How do I post a message?
* Simply use your newsreader to post your message to

comp.sys.atari.announce.
* You may cross-post to other, relevant newsgroups.
* Alternatively, you may e-mail your post to csaa@savetz.com
* Your post will be reviewed by the moderator, usually within 24
hours. If accepted, it will then be posted to the newsgroup. If it
is rejected, you will receive an explanation via e-mail.

How do I follow up to announcements?
* Followups to c.s.a.a announcements should be posted to
a relevant Atari discussion group such as comp.sys.atari.8bit or
comp.sys.atari.st. Followups should not be posted to c.s.a.a.

For your reference, below are the original posting guidelines that are
being replaced.

*** begin old guidelines ***
Guidelines to posting to comp.sys.atari.announce

if you have any questions or comments/suggestions
please respond to myself or reply.

This file should assist users who wish to post to comp.sys.atari.announce
and are not exactly sure if it will be approved:

When posting to comp.sys.atari.announce please make sure of the following:
* post about atari computer relevant topics
* please include an explanation to what the package/machine is in the post
* the post should be at least 10 lines long (message content)
* it should be informative

* What kinds of posts will not be approved?
Any post that is not relevant to atari computers (8-bit, 16bit/clones) will
most likely not be approved.

Details are in the charter, in general posts that sound like "there are some
news, please contact me" without any information on the product in question
will be rejected. Posts that appear to have a lot of spelling mistakes will
most likely also be rejected (such as fairly obvious grammer and spelling
errors). Posts are expected to be in english, if they are in another language
then a translation would be nice, its hard to approve anything that one can't
read.

*Can I post forsale posts?
Forsale hardware posts are generally not approved unless they come from a
company/developer or dealer who wishes to announce new pricing for product.
Comp.sys.atari.announce is not atari.marketplace (doesn't exist however).

* Justification/Charter
Please read the RFD, this should clarify a lot of questions, if you have any
more questions please email me (ysiu@lexicor.com)

Original Request for Discussion: comp.sys.atari.announce

by: Yat Siu (Lexicor@world.std.com)

Group name: comp.sys.atari.announce
Status: moderated (Lexicor@world.std.com)
Distribution: world-wide
Summary: a newsgroup for the product announcement of atari computer
hard and software or related (eg. clones).

Justification:

There are currently comp.sys.atari.st, comp.sys.atari.st.tech,
comp.sys.atari.8bit and comp.sys.atari.advocacy, the first three groups
are discussion forums for their (specific) related hard and software. Product
announcements in these discussion forums of new releases by either commercial,
shareware groups can often be considered a service but not encouraged. The
atari computer market is not very widely distributed and it is getting
increasingly harder to know more about new products.

To begin with a product announcement group would encourage the
people to announce their new products for the benefit of all atari computer
users. It will also allow the reader to focus for a new newsgroup only for
product announcements or press releases and will also make the reader more
aware of his/her options.

Charter:

The proposed group will provide a forum for the announcement and
release of new atari related products:

* atari computer hard and soft
* commercial as well as shareware or related
* announcement from individual authors, companies or distributors
* press releases

NOTE

This RFD is being issued in concordance with the guidelines set in the
"How to create a new usenet newsgroup" FAQ regularly posted to
news.announce.newgroups. Please refer to this article if you have any
questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will
be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups:
news.announce.newgroups, news.groups, comp.sys.atari.st, comp.sys.atari.8bit
*** end old guidelines ***

Source record: 52720
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,or.forsale,pnw.forsale,rec.games.video.atari,rec.games.video.marketplace

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

The best one I have heard yet from the Internet was for an elderly gentleman who by his wife asked him to get a perscription. The gentleman went to the doctor for the prescription, when granted asked the Doctor to cut the dose to 1/4 tablet. He stated he did not need it for sex but his wife wanted it erect enough to eliminate him from peeing on his shoes!

I can relate to that!

Jeff Minter (the Yak!) had (has?) one, and stated several times that it was
a very good design, and that Atari should have released it before the Jag...

Hmm...seems like there is a URL with screenshots but I can't recall what it
is right offhand. Maybe the Atari Historical Society has some? Later... ;-)

Re this group, which is the olny , as far as I can tell, 8 bit Atari group, I find the private "for sales" pf value and have placed a few myself. Form these I have got in touch with other collectors, and arranged swaps/trades and made friends. As we do not have a marketplace, how do we contact others to try and add to our collections and knowledge. I would agree that auctions perhaps are out of place. I do not see how commercial advertising can be acceptable if private advertising is not.

Go to www.mpja.com they have in their catalog Atari power supplies brand new,
otherwise try B&C Atari Sales at www.myatari.com or Best Electronics at
www.best-electronics-ca.com

Hi,

>REALLY!!!! Now I know.... thanks...

The big black caps in the 1050 are smoothing capacitors for the power supply. They're only a few thousand microfarads each and since they certainly won't be fed with more than about 15 - 20V (probably somewhat less) they won't do you any damage.

>....hey... how about those big ones inside
>TV's???? Can we play with them!

Heh, heh, only if you know what you're doing....

The simple answer is no, you should NEVER delve around inside the back of a TV unless you really do know what you're doing.

This is getting decidedly off topic, but playing with the capacitors in the power supply section of a TV PROBABLY won't do you too much harm, because again they don't store too much charge. The thing to be really wary of is the picture tube, this thing acts as a great big capacitor and can store a 25kV charge for years after the set is turned off! It can certainly store enough charge to kill.

As I said it's current that kills, a current of just 50 milliamps flowing through your body is enough to kill you. Voltage IS a factor in that at those sorts of voltages your skin resistance is not high enough to limit the current to a safe value.

An oversimplification, but I think you should get some idea of what I'm trying to say?

TTFN - Pete.

Well, the game QB by Andrew Davie exists.
He sent me a copy to dump to PC earlier this week. I must admit
I was very impressed with this game as it is entirely enjoyable!
I'm having a hard time putting the joystick down long enough to
write this message.

Talking with Andrew, he has given me permission to release it from
my site very soon. Probably early next week. I'll post another message
here when it is online...

The graphics are great and along with the brillant gameplay, makes this
one a regular player! Be sure to check it out soon...

Hi Larry,

>What was the Panther - Jaguar prototype?

No, it was the machine's predecessor - it was to be the replacement for the
7800, then the Jag was supposed to replace it a few years later.

However Jaguar development proceeded at such a pace that Atari decided to
shelve the Panther and released the Jag earlier than expected.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Hi,

I just inherited a batch of Atari 8-bit stuff. Not finished going through it all yet, but so far I've uncovered an 800, 800XL, 1200XL, and 2 130XE's, 3 1050 drives, an XE game machine, and various other odd bits. Unfortunately, it was mostly just tossed loose in a big box. How can I tell which power supplies go with which unit. I notice that several of the PS's are connector compatible, but are rated at various voltages, some are AC output, some are DC. Don't wan't to fry anything through ignorance. If someone can please send the info (reply to sender) or point me towards an appropriate FAQ or something, I'd really appreciate it.

The only unit I've tried so far is the 800, and about half the keys appear not to work. Is this a cleaning issue or should I be looking for something more serious, like a blown chip?
Thanks,
Ron

I made an OSS (Optimized Systems Software where the O has the wrench)
t-shirt. I scanned the OSS logo from a manual. i then loaded it into
Paint Shop Pro (on the PC) and had it stretch the image to fill up the
page. (be sure to keep the same aspect ratio) then printed it. while
the stretching makes bigger pixels it was still clear enough to make a
stencil. the sharpness is not really an issue for how i made my
shirt. also, the fabric will hide small mistakes. i'm very happy
with how my shirt came out. i have the Atari fuji logo printed
already, but have yet to make a stencil.

Actually it is rather interesting, a lot has to do with their rarity, they were the shortest lived Atari computer. Only sold from 1982 until 1983 when they were quickly discontinued after Atari seeing the major faults in the system which Atari's own marketing and HCD management teams all though were its strong points. Also the 1200XL is one of the nicest looking Atari 8-bits, it has the best keyboard of all of them and with a quick piggyback Atari 800 OS chipset fix you can turn the 1200XL back into a fully functioning Atari 800 system, and Bob Woolley of Atari fame has an ample supply of fixes and updates to turn the 1200XL into a full blown power-system. So these are some of the major draws for the 1200XL, it was a loser when it was released, but these days, its a winner.

I would definitely agree with Ed on this. You can find cheaper older 286 and 286 SBC' (Single Board computers) and with them and an SIO2PC interface and a little handy work you can internally mount them with the Case, place some new connectors on the rear of the 1200XL and you have go yourself a KILLER Atari 8bit system in one nice clean case.

>I recently bought a 1050 described as US doubler equipped, which it is not,

For sure, it's not a USDoubler... That mod simply replaced chips in location U8 and U10... each was marked 'ICD"... one of which was a module about 2-3 times thicker than the original chip..I can tell you, as you already know.. what it's NOT... sorry, don't know what it IS!

The Atari 1050 uses a 9v AC adaptor, if you plug in a 12V adaptor it will fry it! As well as the Indus disk dorv.. This uses a 11.5v DC adaptor, if you plug in an AC 9v power supply you will fry componets

If one is not sure which power supply to plug in the by all means ask here on the net. It will save you hours of grief, and anguish. Someone will get back to you with the information you are seeking.

Not sure but think I just may have replied to this before. Pool Disk
was the First CD-ROM producerf for the Atari 8-bit. James King may have
been the Second. I sepent a year reserarching files ect, took 80% of
the Pool P/D disk and included 3 Atari Clubs Libraries from the United
States. Included the programs to Unarc/Discom the items on the CD.
Price $20.00 shipped within the U.S. Or any Country in the world.

bob

This item is avaiable at any time..Just send check/mo to
Bob Klaas

The U.S. Doubler only requires 2 Chips. The Rom has to be changed and
the Ram has to be changed to a double stacked rom. Try your new board
on a software item like a fake Happy ect see what works, may ne an 1050
Arciver, or Duplicator, if it came with a prt and resistor that was
installed at the back of the drive???/

Hopr this helps..if not can send you a U.S. Doubler conversion for
$20.00 U.S. Consists of 2 chips and documentaion. If interested:

Send IMO or M/O, whthin the U.S. CHECK is Acceptable to:

Source record: 52660

I need some assistance, those of you that are fimiliar with the Percom Drives have surfed the net
and have places I may have missed.. From the conseption Percom produced single density disk drives, then double density drives. They went on to produce double sided single and double sided double density drives..

Does anyone have a clue to the Internet where information about any Percom drive produced can be obtained? Your assistance in this area will not only enhance my knowledge but benifit yourself and anyone using a Percom.

I have several, modles to play with but would like if avalable a list of what they actually produced.

Just for those that didn't know, picked out one to test and it has a Printer Ribbon cable attached, so if you have one that has a 34pin (actual pins) sticking out the back it will interface a printer to yourr computer..The card edge if sticking out the back will access 3 slave disk drives, provided the SLAVES are turned on first. More on this great Improvment for the Atari 8 Bit in the next couple weeks.

Yea you got it the Best Disk Drive for the Atari 8-bit is the Percom delending upon the modle you own

The Pool disk II (Too) are superb..

Ernest was ULTRA prompt with delivery (3 days to the UK) and the content is superb. There are very few copyright games on there tho (this I knew before the order went) but that might be what the Phantom is looking for.

Btw, Bob's disk sounds great too :)

The 1200XL is the best looking Atari 8-bit machine. My dad bought me one for
$140 in 1982/83. Some minor incompatibility problems with both the 400/800
and XL/XE lines, but a great machine.

Personally, I liked the 800 keyboard more. But the 1200XL did have more keys.

Ok,

I've received tons of email from people asking where they can buy a
nice Atari 8-bit startup system and I've directed them to all of the
Atari dealers on the net, now I have some over stock that I will part
with, so instead of going Ebay and having this stuff go way out of hand,
here is someones chance to have a complete, working, boxed Atari 8-bit
system:

Atari 800XL complete with manuals, cables in original box
Atari 1050 compute with manuals, disks, cables all in original box

Atari 1025 Printer all in original box
-or- you choice:
Atari 1027 Printer (Brand New in sealed never opened Box)

$100 plus shipping within the continental US, thats $33 per component
which are all working in original packaging, manuals, cables and
boxes. Not really a bad deal for a complete set-up.

If interested email me, I will wait until the end of the week, then its
off to Ebay with it if noone is interested.

Curt

For Sale:

Atari 1064 64K Memory module for the Atari 600XL, this was the only
released Atari PBI (Parallel Bus Interface) component from Atari, it
simply plugs into the back of any Atari 600XL and adds 64K to it and has
a connector on the back to add other PBI peripherals if needed. No
soldering or opening your 600XL, simply Plug N play.
$15

Atari 1020 Color in original box:
$20 (Include power, paper and pens)

Atari 1050 Disk Drives: (3)
$20 each (Include power, SIO cables)

Atari 1010 Cassette drives in brand new sealed boxes)
$10 each

ATR8000 Interface (Allows use of serial, parallel and standard IBM type
diskette drives, can run any type of drive from 8" to 5.25" to 3" and
3.5")
$65

Atari 800XL's (3) complete with power and SIO cables
$20 each

Atari 1030 Modems (2) Direct Connect with built in ModemLink Software
$5 each

I'm selling these items until Friday, then anything left heads for Ebay.

>From the conseption Percom produced
>single density disk drives, then double density drives. They went on to
>produce double sided single and double sided double density drives..

Hi Bob-
I don't know of any place on the net that has
Percom info, but here's what I have found
going through Compute!, Antic, Analog, and
Softside. Softside was easy - NOTHING!

By far the greatest number of ads were in
Compute! My Compute!s start in May of '81.
The first Percom Data Company ad appeared
in 10-81. Unfortunately, it was an MFD series
for AIM, KIM, and SYM computers - $599.
They advertised almost monthly through early
1982, then stopped.

The next ad was June, 1982,
and this is the first Atari Percom ad - the RFD
series - $799 (!) and slave drives were $399.
The RFD series were evidently all D/D.
The ads talk about the ability to dynamically
control 4 drives, querrying and adjusting -
the Percom Block. In August of 1982, the
price of the first add-on drive was $459.

In December of 1982, the first ad for the
AT 88 series appeared - $488. But single
density only. In November of 1983, the
first Compute! ad appeared for the
AT88 S1PD - $599. Now, the model
designation makes sense. Printer port and
double density. I find no ads after 11-83 in
Compute! for Percom Data Company, Inc.

Antic.
My whole issues of Antic start in April 1983.
I decided to save space years ago, and cut the
early issues up. Sigh!) The AT88 was
advertised monthly from 4-83 thru 8-83.
Then in 9-83, the AT88 S1PD is advertised.
That was the last ad that I found in Antic
for Percom.

Analog:
Just a couple of ads in Analog. I found an
ad in #9 (11/12-1982) and #10 (1/2-1983).
These were both for the AT88 model.
There was no ad in #6, and I do not have
#7 or #8.

Summarizing the info.
About June of 1982, Percom starts advertising the RFD drive for $799. About December,
they started promoting the AT single density drive at a much lower $488. In Sept, 1983,
the the AT88 S1PD double density model
appears, still for $200 less than the original
RFD series. In Nov, 1983, the last ad that I
could find appears for Percom.

In March and September of 1984, Analog
and Antic (respectively) carried disk drive
reviews. Percom got a brief mention in the
Analog article, but was not carried in the
reviews in either. So judging by the
advertising, Percom's moment in the sun
was pretty brief.

Actually, James King released his CD before we did.
We probably did start our project before he did, since it took us well
over one year to complete the Pooldisk project. We announced we
were working on it about halfway through the project, and asked
people for their help. Anyway, the CD from James King was simply
a copy of what he used to have on his web site or FTP site I think.
We do have that CD. I suppose it was relatively easy for him to
create this CD, although in that period CD writers were rare.
We released the original Pooldisk in October 1995.
We released Pooldisk Too in October 1998, and I believe we
are the first ones to release a double CD.
Now who is going to be the first to make a DVD?

Well, there are not that many drive upgrades are there?
It could be a Speedy, produced in Germany. Try booting your
machine with no floppy in the drive. The Speedy, when booted
with the floppy "door" open, will boot Bibo-Dos or a Speedy
sector copier from the ROM in the upgrade.
Anyway, one of these chips you describe is probably a ROM
or an EPROM or such. You could try to read the contents.

Yeah, only a 5200 Trak-Ball (note correct proprietary Atari spelling)
should go for $25.00, maybe a bit extra with a nice box. That would be the
CX53 model.

A CX22 Trak-Ball (or the Computer Division's equivalent, CX80) is more like
a $10-15 item. Not that you don't get yoru money's worth. You can either do
joystick emulation for 2600 games or high-res mode for the 800 computer.
You have to put the switch on the bottom of the unit in the right position.

4161. AtariBASIC program for Fuji logo

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-02 00:00:00 UTC
From: marknewtonjohn@webtv.net
Message-ID: <17281-372D318E-107@newsd-224.iap.bryant.webtv.net>
Source record: 52677

In my distant memory, I remember typng in a program that draws the Fuji logo using BASIC statements to draw it in a wireframe 3-D and rotate it. Slow as hell, I think I compiled it to run faster (not by much). I'll have to try to find it.

4162. DOS 3 POKES

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-02 00:00:00 UTC
From: marknewtonjohn@webtv.net
Message-ID: <17283-372D32C0-22@newsd-224.iap.bryant.webtv.net>
Source record: 52678

I had read that there were some POKE statements to fix some bugs (?)
that were in DOS 3. Can anyone tell me what they were, and where was
this stated? In an Atari magazine?

I am curious, as I don't remember hearing or experiencing any bugs under
DOS 3. I'm not talking about the incompatibility between the physical
sector formats between DOS 2 and 3. I haven't lost any data, and all my
DOS 2 programs ran under DOS 3.

Hello Curt,
a 1064 is nice, but as I found out, this does not make your 600XL fully
800XL compatible. Many games from Eastern europe did not work on this
upgraded 600XL, although they worked well on an 800XL. So, how do you
upgrade your 600XL to 64k plus make it fully XL compatible ?!?

I'd be very interested if you could find it
and post it. One of my favorite little Basic
programs was the "Statue of Liberty" program
from FAMILY COMPUTING. Talk about
slow - at times under Atari Basic, you
couldn't even see the thing move as it was
being drawn! Under Turbo Basic, much
better; compiled Turbo - much better still.
One of my "projects" (someday) is to convert
it to ACTION!

Actually, I hope someone comes up with a
CD Rom driver for the BB, so that we don't
have to go through the PC to read it.
Supposedly, one of the IDE interfaces
was going to do this, but I don't think it
ever happened. (?)

There were (at least) 2 versions of DOS 3 released, the early version
was known to have some bugs in it which were fixed in later version.
The later version of DOS 3 came with a loose page insert in the manual
detailing manual errata and it also mentioned that the earlier version
of the DOS had a bug regarding random file access on large files.
Unfortunately it doesn't go into any more detail than that.

There is a PEEK that you can do to find out which version of DOS 3 you
have, it's listed in several places, including Mapping The Atari,
revised edition, posibly in one of the appendices (11 maybe?). Don't
quote me on this, but I think the location is 1816. Regarding the
POKEs I can vaguely remember reading that too somewhere, but not sure
where. It could have been in Mapping, or on that insert.

If this is the same program I'm thinking of, then it was published in
ANTIC Volume 2, Number 5, August 1983. The article and BASIC listings
are available from the Digital Antic project at:

http://www.atarimagazines.com/v2n5/3dfuji.html

Well, I finally received my *brand new* copy of BOULDERDASH (cartridge) this morning and I could not be happier! This game was (and still is) bucketloads of fun to play and the level designs are just a work of genius. I'd also like to point out that this game was about 7 YEARS ahead of Sonic The Hedgehog when it comes to "idle" animation. (I've read in magazines on numerous occasions that Sonic was the first game to feature an "impatient" character that taps his foot, etc... if left alone for a few moments.) I'd also like to point out that SHAWN SCALLEN (an914@freenet.carleton.ca) is to be recognized as a good trader/seller. He is the guy that I got the Boulderdash cart from. Thanks, Shawn!

4172. FS/T: Atari 8-bit computer items [05/03/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-03 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <3735b655.14239092@news.nls.net>
Source record: 52597

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 05/03/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 2.50 3-D Tic-Tac-Toe
$ 2.50 Alphabet Zoo [Spinnaker] -- no label
$ 2.50 Atariwriter
$ 2.50 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede

$ 2.50 Dig Dug
$ 2.50 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 4.00 Gateway to Apshai [Epyx]
$ 1.00 Missile Command
$ 2.00 Pac-Man
$ 2.50 Qix
$ 1.00 Space Invaders
$ 2.00 Star Raiders

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}
$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Cassette with plastic storage case:
$ 1.50 Energy Czar [Atari]
$ 1.50 Hickory Dickory [Atari Program Exchange]
$ 2.00 Stellar Shuttle [Br0derbund]
$ 3.00 Touch Typing [Atari] -- two tapes, covers Beginning,
Intermediate and Advanced.
$ 1.50 Video Math Flashcards 3.1 [Atari Program Exchange]

Cassette with box, plastic storage case and manual:
$ 2.50 Biorhythm [Atari]
$ 2.50 An Invitation to Programming 1: Fundamentals of
BASIC Programming [Atari]

Accessories:
$ 0.50 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 2.50 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 8.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 4.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 4.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 6.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 4.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will not boot up. Sold as non-working item, possibly repairable, for parts only!

$ 3.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in

business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

```
(R. Espino mentions a logo prog from Antic.)
Right, that's a 3D rotating logo and is sorta complicated.
I think it just uses data statements and doesn't provide
a 'formula' for the logo.
Here's a brief one. Not a bad logo. Most of the code is
to do the 'Rainbow' thing in the background. The logo
plotting code starts at line 3000.

I know the FAQ lists a few FTP sites, but I know there must be more.

Do sites like YOGI still exist?

Does somebody else have a comprehensive list of ftp sites for 8bit Atari?

I'm trying to create rev. 3 of my Atari CD..

(My Atari Logo program, well, not mine, from my archives. Don't know who the author is.)
It is supposed to have rainbow going down in background and rainbow going up in the logo. If anyone tries it, it doesn't come out right in XLIT or ATARI800 on my pc. The background comes out ok, but the logo is supposed to have the rainbow and doesn't. Maybe my DX4 120 isn't fast enough?

The subject pretty much says it all. I'm looking for a copy of the book "Atari Graphics and Arcade Game Design" by Jeffrey Stanton.

Has a cartoon XL-like computer on the cover being chased by some cartoon video-game badguys.

I loaned my copy out years ago and never got it back and, of course, now I need it. ;-)

I'll pay $20 + shipping. (Which I think is more than it sold for originally!)

Thanks,

-Clay

4182. XL Search Update - Digital Antic Project and more

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-03 00:00:00 UTC
From: nbs@sonic.net
Message-ID: <7gl56tbnv3@ultra.sonic.net>
Source record: 52607

XL Search now includes an index of the over 1,600 files stored at the
Digital Antic Project:

http://www.atarimagazines.com/

As well as an index of Andre MacFalkner's Atari 8-bit Projects:

http://members.aol.com/macfalkner/

Also, as of last month, XL Search's "New Stuff" button actually shows new
stuff... rather than showing things that were added in the last 7 days
(which didn't make sense since XL Search's index is typically updated once
a month, or less often).

Enjoy the over 17,000 files listed:

http://www.newbreedsoftware.com/xlsearch/

And if you have an FTP or website, or know of one, that isn't listed at
XL Search, please help me add it!

4183. 800XL Keyboard Woes!

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-03 00:00:00 UTC
From: nbs@sonic.net
Message-ID: <7gl5cebnv4@ultra.sonic.net>
Source record: 52608

I turned on my (real) Atari 800XL for the first time in a month or three, and I discovered that the keyboard is messed up. When it's on, the TAB key acts like it's being held down the whole time.

I didn't do a comprehensive test, but I did discover that RESET and BREAK still operated, although TAB just sits there.

I sprayed for dust, but to no avail. I'm pretty sure it's the keyboard unit, since when I disconnect the lame connector strip from the motherboard, the TAB stops. (No pun intended :))

Details... on the back of the keyboard, it do say:

304T 84
SCCO C061983 REV 3A
MADE IN TAIWAN
[STACKPOLE]
TEST: 1- 2- *

* - Some scribbling that looks like "1) 32 N" or something.

Also, there's a "22" stamped to the right of the 84, kind of in between the top two lines.

Any ideas?

> When it's on, the TAB key
>acts like it's being held down the whole time.

Careful here... try pulling the key cap off... you want to get to the small spring inside... you can do one of two things... squeeze it a little.. to 'compress' it... if that doesn't work, I understand you can clip a small piece, let's say a half curl off... be certain that the clipped piece is AWAY from the membrane board.. in other words towards the key cap... otherwise you'll damage the membrane...

Caveat: I've never done this... I own 800's and a 400... I've seen/read/heard of this fix countless number of times... it's even documented in Best's catalog as a quick fix... Good luck...
B'rgds,
Vinnie

Welcome to the world of the 8-bit Atari!

I'm finding that the 8-bit world is quite a lot more interesting than the Atari St realm, though that is considerably fun. But the 8-bit machines are said to be akin to the Amiga computers, having been developed but the same engineer.

I love the 8-bits, and if it were not for the 40 column screen and slow running I/O port for modem speeds, I would probably play more with it.

Hell.. maybe I should sink my money into a black box and pursue the "current" 8-bit world. :) Seems kinda fun... might be a slightly more fun way to go.

But then again... the internet browser CAB in the ST world is a fun concept. :)

Let me know how it goes. If nothing else I have a spare Assembler Editor cartridge I could part with for cheap.

Baudot? Try the cartridges "Telelink" and "Telelink II". Simple, very basic terminal emulators. (No Atascii). Nevertheless they have Baudot there.

Damn I love the 8-bit world. ;)

Well I didn't see any Atari 2600 bases, so I'll ask here.

I have the first 2 years of the the Atari Age magazine for the Atari 2600 (VCS) system. I Scanned the first 2 issues, if anyone likes I will post them up here. Cool to look back 18 years ago and read about all the old stuff.. Let me know. I guess I'll zip each magazine together into 1 file. Should be like 1-1.5 megs each not bad.

> like the original PC keyboards. Nice honest-to-god switches, not
> some lame little rubber contact.

While I will not argue over the original 800 keyboard having better
"feel", I will claim the 1200XL had the better layout, as any touch
typist who has hit the "break" hit when going for "delete" on any other
Atari 8-bit keyboard can attest.

It also had an advantage in the the low, sloped front of the 1200XL case
puts it in a more "ergonomic" position. Technically, however, that is an
issue of case design, not keyboard.

> assume the board was also made in England, but have no proof of this.
I *think* this is a UK board but I can't remember the name! I bought one years ago (1985?) for my 1050 and it was indeed a very home-made looking affair bought from an address like "The shed, someones back garden, Luton, Essex" i.e. very low key. It was incredibly fast - much faster than the Happy or US doubler in friends machines and also copied almost all software although not all. It seemed to be compatible with everything and cost around £45 at the time which was great compared to £150 for a Happy board. I suspected it was a reverse engineering of an existing device but I could be wrong.

With the right DOS it flew along. Whereas a normal 1050 went beep beep when it loaded and a Happy went more like machine gun fire, this one was sounded more like a buzz - one very fast constant stream of pulses. Even 48K games loaded in a second or two. Surely right at the edge of the bus's abilities?

I wish I could remember the name though - The eprom had a hand written label with a number I think. I never saw an add for it - it was bought through the small adds in an 8bit UK mag.

> spring inside...

And when he says careful, he really means careful, unless you want to spend the next half hour on your hands and knees looking for the missing spring (I've done that one a few times!) =) Those springs have a habit of shooting out if you're not real careful when you lift the key cap off.

Stick a small screwdriver underneath the edge of the key cap and lift it up real slow, with your finger on top of the key cap to make sure it doesn't suddenly jump out. When you feel the key cap snap out of place, lift it up slowly. The springs have a habit of sticking to the underside of the key cap too, so once you've got it out, turn it upside down, to make sure the springs don't fall out.

If it's the same type of keyboard on my 800XL, there should be 2 springs in there, a larger one that makes the key cap move in and out, and a smaller one that touches the key contact through a small hole.

> you can do one of two things... squeeze it a little.. to
> 'compress' it... if that doesn't work, I understand you can clip a small piece,
> let's say a half curl off... be certain that the clipped piece is AWAY from the
> membrane board.. in other words towards the key cap... otherwise you'll damage
> the membrane...

Do the above if after removing the key cap and springs, the TAB key stops, but if the TAB key is still going after you remove the springs, then you're going to need to take the whole keyboard apart (by removing all those screws on the back of it) and separate the contacts. If it is the same type of keyboard, and memory serves correct, there's a couple of plastic sheets in there with traces drawn on them, and pads where the keys are located. Separate the sheets, and if necesary clean them. Then put it all back together again. Even if this is the problem, you might want to snip a little bit off the spring anyway.

I've got a list at:
http://www.geocities.com/SiliconValley/Lakes/7953/atari.html

which might be of use to you.

Also check on the Resources page:
http://www.geocities.com/SiliconValley/Lakes/7953/8bit/resources.html

for other web pages with downloadable files on them. If you find any
sites that are missing from the page, or any on that page that no
longer exist, then please let me know and I'll update it.

4205. DGS Atari 8-bit site - Summary of contents

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-04 00:00:00 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <01be9643$21481560$LocalHost@comgar-w95-001>
Source record: 52621

DGS - Who are we and what do we do?

Dean Garraghty Software (DGS) supply Atari 8-bit software, both PD and exclusive Commercial software, including the PPP products QUICK and SAM. We have been supporting the Atari since 1988, and plan to continue doing so. We are based in the UK, but sell to anywhere in the world. We accept payments in UK Pounds and US$. Shipping charges to the US are no more than $5 per order in 95% of cases.

The DGS Website - What's on it?

We have recently been building our site up to include more Atari archive material. Here is a summary of the site:

* Our main PD/Commercial software catalogue

* Latest list of used hardware/software/books/magus we have for sale

* List of PC CD-ROMs we have left which need clearing out (CD-ROMs from 50pence each!)

* Free demos of the Quick programming language and Digi-Studio to download

* 17 articles written by me (covering a variety of Atari-related subjects) and originally published in the Atari 8-bit News-Paper and Page 6 magazine

* Photos from the 1990, 1992, and 1993 AMS shows held in the UK

* Cover scans of the early Page 6 issues including the very rare Issue 1

* Cover scans of all 5 issues of Atari UK's I/O magazine from the early 80's, including the rare Issue 1

* Cover scans of the Official Show Guides to the Spring and Autumn 1987 'Atari User Shows'

* A scanned article from I/O magazine about how Atari got its name

* A cover scan of an old Silica Shop catalogue from 1987

* A complete scan of an Atari UK service centre guide from 1983

* Cover scan of Issue 1 of the UK's "Monitor" magazine (a real treat for folks in the UK!)

More stuff will be added quite regularly, so make sure you come by from time-to-time.

The site now uses frames (only 2 to be exact!) so it may take a while to start up on some machines/browsers. Be patient! If you have any problems

using it with your Browser, then please let us know.

All you need now is the address, which is: http://www.dgs.clara.net

Please stop by and take a look!

Dean Garraghty

Couldn't you make your own by changing Y1, ANTIC, and patching the OS?

BTW: Anyone know if its possible to get a US TV to see the colors of a
PAL 800XL? I can see the screen, slightly compressed, but the colors
are all missing.

There is an individual, his name is Travis Nave, his user ID is both "cyber-crud" and "cybercrud". Thats right he is using two user ID's (do a contact sheet search and you will find they are one in the same person), he burned me by winning one of my auctions and not sending any letter to me whatsoever, but it does not end there, after numerous emails he has never answered me back, after contacting ebay they informed me to leave him the appropriate feedback. After a few days he leaves me a negeative feedback in a retaliating mannner. After doing some research I discovered that he was bidding on the same item offered by other ebay users during the same time period, apparently he bid on several to get the best price before sending any money to anyone. Furthermore, he uses his two ID user names to leave positive feedback for each other and even used his alias to defend his negeative feedback (check his feedback rating), this person is very pathetic and a very dangerous user to anyone who uses ebay since he will blemish your name. If he happens to be in one of your auctions get him off, he will screw you over. I have emailed all information to safeharbour on ebay and hopefully we can do something about this person.

Hello,

I'm looking for a web page that will list the Atari Basic commands and memmory location the Pokes and Peeks of Atari.

Also I'm looking for a program to add BAS file to the XFD or ATR files for MSDOS.

Boy! I miss my BBS when I ran it using CARINA and CARINA 2 BBS software, 15 years ago out of my bedroom.

Source record: 52631

Ok on your 800XL keyboard..

First of all remove the screwss to the top of the comuter. Than remove the keyboard marlar from the socket in the comuter. Look at it, if it is coroded up, take a pencil eraser very lightly and clean the strips to a silver color.

It that does not work then remove all the screws from the back of the keyboard and gently lift the keys from the back.. Wipe the marlor clean with a very lightly damp cloth..do not wet it down as it will mess up the traces. Very light damp...Place the keys back on the marlar, do not insert the srews yet, plug it in, turn on the computer and see if it still sticks..If so...remove it again get some cleaner from Radion Shack and spray the upper area of the key that sticks, go to bottom of key and spray that, make sure the cleaner you have will evaporate leaving no trace or residue. Then let it dry for a day, (yes a Day) some of these cleaners will not dry completely in less time. Then try it again, it that fails, then get a replacment keyboard (working of course!)

Ok I back up here seeing a couple other posts. I forgot they put out 2 different keyboards for the 800XL, one was with a Marlar, and the other type was with a circuit board hard wired. Depends upon which type you have in your computer.

> Greets - Andreas
>

That is strange. It only adds extra memory to make the 600XL fully
compatible with the 800XL. Hidden ram Under the OS rom works as well.
I cannot see why those games didn't work.

BTW. I have seen people say that the 600XL with the 1064 has 80K ram.
That may be right technically, but the ram seen is only 64K. There is
no way to access the extra 16K.

NO. A second crystal must be added and other bits and pieces
associated with it and another chip. . There is no place on the
motherboard for this to go, unlike the other XL's.The os can stay the
same

>

no. The PAL colour signal is completely different to the NTSC one. PAL
has much better colour synchronisation.

> I seem to have lost them.

Hi Steve-
First, how did the second file (ZIPped) come
out? I presume it is ok, but if the 6 header
bytes from the A8 binary load file cause you
a problem, let me know.

I checked the file that you sent me, and it is
exactly 2K. Glad it made it through ok.

I probably have everything that you
mention as far as Happy/Archiver manuals.

Give me your "wish list" and I'll check for
each. There is one small twist. The first
Super Archiver that I got came with only
an addendum of new features (8-1/2 X 11"
Xerox). The second SA came with a manual
from B&C called "SCAN-IT" That manual
is virtually identical to the original Archiver
manual, again with an addendum. Happy
stuff - I got most all of the Doc from the 810
Happy an up to Rev 7.1 for 1050 and
upgraded 810, and Discovery Cart for the ST.
Also, I THINK that there is some Happy doc
ot the UMich archive. Not sure, but I believe
I saw that in a post fairly recently.

If I just could find a Happy Technical manual!

Give me a list - we'll work something out.

What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE 800XE XE Game System

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor. The Atari 800 was code-named "Colleen"; the 400, "Candy."

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan, mailto:finneganj@delphi.com)
Jerry Jessop, mailto:jjessop@ix3.ix.netcom.com
Scott Emmons, mailto:scotte@center.uscs.com

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design

Doug Neubauer - POKEY logic design
Mark Shieu - POKEY chip design
Steve Stone - POKEY layout design
Steve Smith - Technician for ANTIC and GTIA
Delwin Pearson - Technician for POKEY

OS PROGRAMMERS:
Larry Kaplan
David Crane
Bob Whitehead
Al Miller

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop, mailto:jjessop1@home.com writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 128 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 8 graphics modes and 6 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The 800 can be fitted with 1-3 of the following two RAM modules:
CX852 8K RAM module, CX853 16K RAM module
and must be fitted with a ROM module:
CX801 10K ROM, CX801-P 10K ROM for PAL machines

[WHEN WAS THE 400/800 REVISION B OS INTRODUCED????]

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop, mailto:jjessop1@home.com adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Buss Interface (PBI), providing fast parallel access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the 1064 Atari Memory Module.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(
Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Atari Games Corporation is a developer, marketer, licensor and publisher of coin-operated video games, having created such classics as Pong, Asteroids, Centipede, Missile Command, Gauntlet, Area 51, and San Francisco Rush Extreme Racing. Atari Games Corporation is a subsidiary of Midway Games Inc. (NYSE:MWY). The Atari Games Corporations home page is at http://www.atarigames.com.
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus the FREDDY chip, supporting the unique (but rarely used) ability for the 6502C and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge

Interface (ECI), continuing the powerful feature of a fast parallel port. European 65XE's include the ECI port.

Only by the final production run of the 130XE (when was this???) was the XL/XE OS revised to include a "keyboard test mode" that matched the XE keyboard, and a RAM test that tests the full 128K of RAM.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

The 800XE, a 130XE with just 64K, was released at some point in eastern Europe. [WHEN???]

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which is a subsidiary of Hasbro, Inc., for $5 million in cash.

Hasbro Interactive, Inc. is a leading all-family interactive games publisher, formed in 1995 to bring to life on the computer the deep library of toy and board games of parent company, Hasbro, Inc. (Amex: HAS - news). Hasbro Interactive has expanded its charter to include original and licensed games for the PC, the PlayStation(R) and Nintendo(R) 64 game consoles and for multi-player gaming over the Internet. Headquartered in Beverly, Massachusetts, Hasbro Interactive has offices in the U.K., France, Germany, Japan and Canada. For additional information, visit Hasbro Interactive's web site at: http://www.hasbro-interactive.com .

Atari Interactive, Inc. is a Hasbro affiliate, online at http://www.atari.com/

Atari currently markets Centipede, see http://www.atari-centipede.com/

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer... The ATARI 8-bit could also be made to speak using SAM (Software Automated Mouth) by Don't Ask Software. It can speak without the use of any hardware modification.

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product.

The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his/her computer platform was developed years before the IBM PC or Apple Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a popular alternative in today's home computer marketplace.

Subject: 1.3) What are the some of the performance features of the 8-bit Atari?

Some of this text by mailto:nbs@sonic.net (Bill Kendrick).

CLOCK SPEED:
NTSC machines: 1.7897725 MHz
PAL machines: 1.773447 MHz

SCREEN REFRESH RATE:
59.94 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

ANTIC AND THE DISPLAY LIST:

ANTIC Mode #	CIO/BASIC Graphics #	Type	Display Resolution (full screen)	Number of Colors
2	0	Char	40 x 24	1 *
3	-	Char	40 x 19	1 *
4	12 ++	Char	40 x 24	5
5	13 ++	Char	40 x 12	5
6	1	Char	20 x 24	5
7	2	Char	20 x 12	5
8	3	Map	40 x 24	4
9	4	Map	80 x 48	2
A	5	Map	80 x 48	4
B	6	Map	160 x 96	2
C	14 ++	Map	160 x 192	2
D	7	Map	160 x 96	4
E	15 ++	Map	160 x 192	4
F	8	Map	320 x 192	1 *
F	9 +	Map	80 x 192	1 **
F	10 +	Map	80 x 192	9
F	11 +	Map	80 x 192	16 ***

* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16 luminances x 16 hues = 256 colors. (Four registers are for player-missile

graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video incarnation, are totally redefinable.

PLAYER-MISSLE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four 2-bit wide, 128 or 256 byte high single color missiles are available. A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to XOR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:

All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was (fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following four paragraphs were written by Chris Crawford and appear in De Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc., 1981-1982. The text been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different from other systems. It of course has a microprocessor (a 6502), RAM, ROM, and a (PIA). However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA, and POKEY. These chips were designed by Atari engineers primarily to take much of the burden of housekeeping off of the 6502, thereby freeing the 6502 to concentrate on computations. While they were at it, they designed a great deal of power into these chips. Each of these chips is almost as big (in terms of silicon area) as a 6502, so the three of them together provide a tremendous amount of

power. Mastering the Atari 8-bit computers is primarily a matter of mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

While the 400/800 models contain a generic 6502 CPU, all of the XL/XE models contain Atari's customized 6502C chip. Alan Manuel K. Gloria, mailto:mani@pworld.net.ph writes:

The difference goes something like this: On the Atari, there are two microprocessors, ANTIC and the 6502 or 6502c. To allow them to coexist, ANTIC must shut off the 6502/6502c, a process called DMA. The 6502 supports DMA, but in Atari's implementation, it required 4 chips. The 6502c has this additional circuitry built-in.

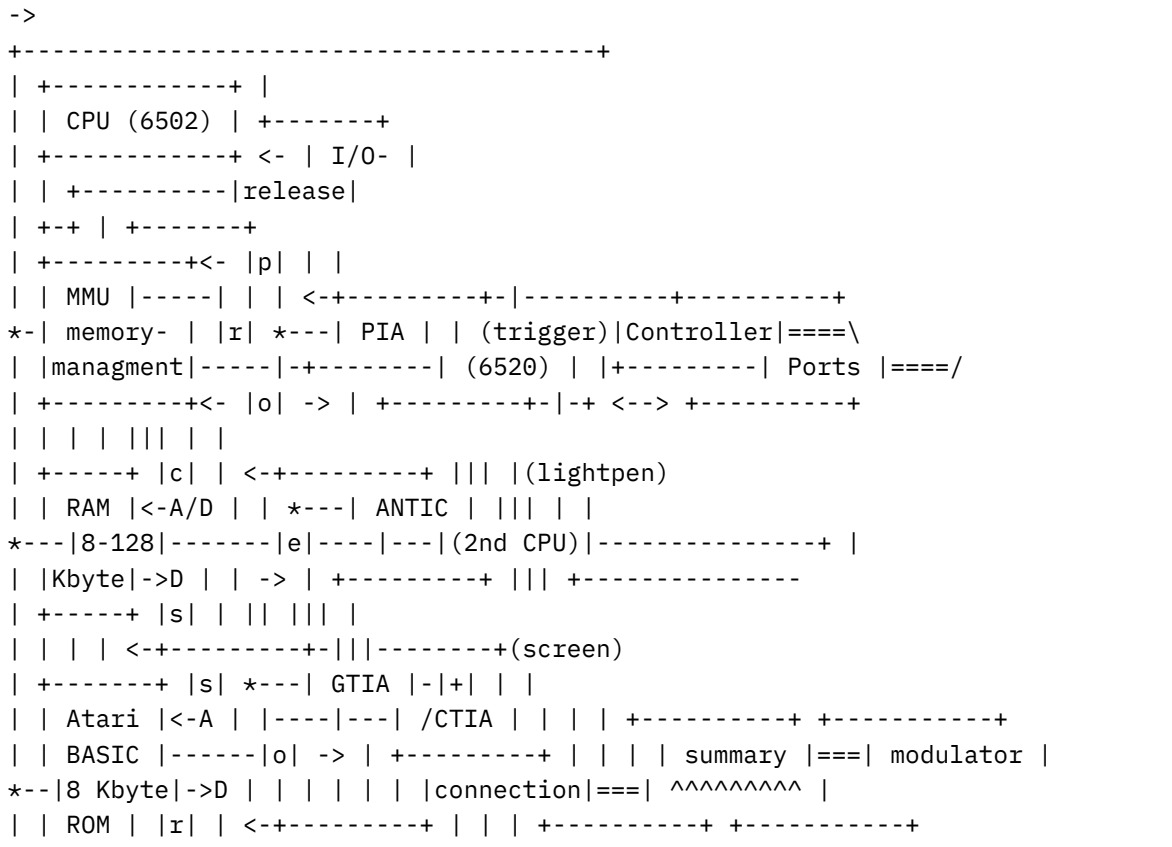
More on this from James Bradford, mailto:sup8pdct@mail.cth.com.au :
The 6502c in all PAL atari's, late 400/800, XL, XE NTSC atari's have A special 6502. This 6502 has an extra line called HALT. It is controlled by ANTIC which it uses whenever it needs the data/address bus. The HALT line is on pin 35 of the atari 6502 and must be pulled high for the chip to work (I think) . Early 400/800 NTSC atari's used a standard 6502 and a couple of chips to stop the processor when antic needed the busses

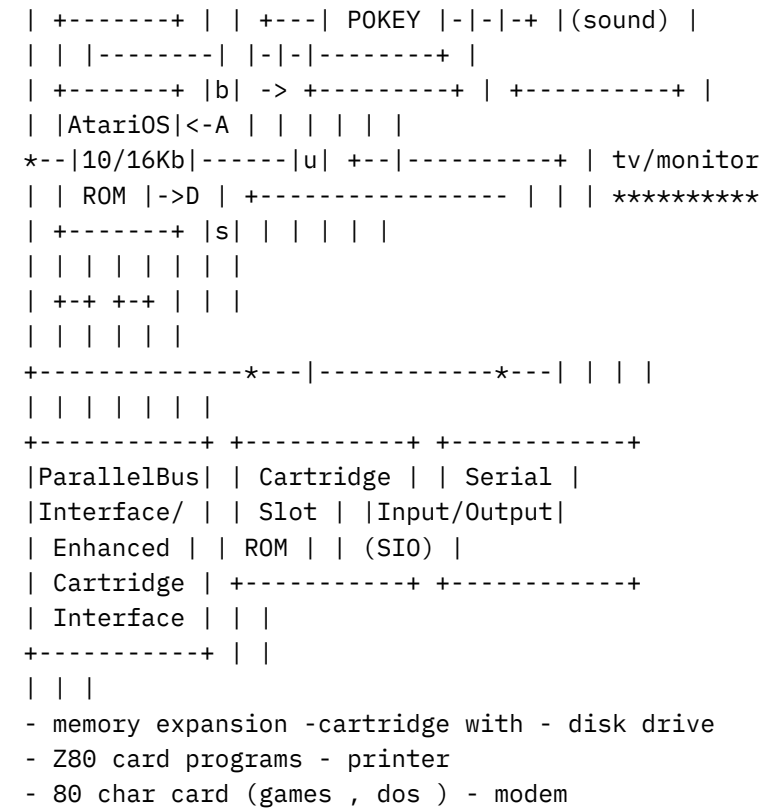
The 130XE and XEGS contain a small additional LSI called FREDDY, a RAM address multiplexer. According to mailto:sup8pdct@mail.cth.com.au (James Bradford), "FREDDY is a type of memory controller. It takes the

address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDY also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDY but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDY, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDY for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDY does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDY) and an extra 8 RAM chips."

And more recently James Bradford has written:
Freddy is just a memory decoder and timer. It replaces several chips in the 800xl The small chip near freddy does all the bank selection. CO25953. One line from freddy , Ras (or is it cas?) goes to this chip, Halt and the bank /processor select lines go into this same chip and ras (cas?) comes out. a pin for each bank. If i remember correctly, refresh also goes into this small chip. It would be quite easy to make an 800xl work just like a 130xe with this chip since Ras (Cas?) is required by ALL dynamic ram.

Hardware Arrangement (With thanks to mailto:peter@soemtron.handshake.de (Thomas Havemeister))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard
130XE:128K standard
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Subject: 1.5) How did Atari get it's name?

Graham Thornton, mailto:dangermouse@prodigy.nospam.net types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are thiers, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Large binary posts do not belong in unmoderated discussion groups like comp.sys.atari.8bit. If you wish to share PD/freeware/shareware, use alt.binaries.atari and alt.binaries.atari.d or upload the software to the University of Michigan Atari Archive.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

Subject: 2.2) What other Usenet newsgroups cover the 8-bit Atari?

news:comp.sys.atari.advocacy
Attacking and defending Atari computers. Unmoderated.

news:comp.sys.atari.announce
Announcements of Atari-related hardware and software, Web sites and other Internet resources, and events
Moderated by Kevin Savetz, mailto:savetz@northcoast.com

news:comp.sys.atari.programmer
Programming on the Atari computer. Unmoderated.

news:rec.games.video.classic
Orphan home video game systems. Unmoderated.

Subject: 3.3) What is ATARIPL?

From: Wojciech Hartman <harti@waw.pdi.net>
Date: Saturday, March 15, 1997 3:51 AM

I am proud to announce that there is a mailing list "ataripl" for all
polish-speaking Atari users and enthusiasts.

To subscribe the lists you have to send an email to
mailto:majordomo@piwo.bl.pg.gda.pl containing a line "subscribe ataripl".

Subject: 3.4) What is ATARI8-L?

maciej grzeszczuk, mailto:krap@zwieracz.ideefixe.nom.pl writes:

i'd like to invite all of you to atari8-l mailing list.

it's probably the biggest atari 8 bit related mailing list in the world -
- connected bidirectionally to old list at MARIST, and gatewayed to the
FidoNet(tm) international ATARI8-L echo.

for now it has about a 100 subscribers, from all around the world. the list
is free from all the F/S messages, and other off-topic discussions, so
you can find there pure atari8 related stuff... all the messages comes right
to your email account, so there is no need to contact a newsserver, there
is no old-messages deleting, and so on... my wish is that every atari user
would be subscribed, so the atari community stay together and grow in
strenght.

to subscribe, please send the message to majordomo@zwieracz.ideefixe.nom.pl
with the following line in the body (not the subject) of your message:

subscribe atari8-l

the language we use is, of course, english. the list is fast, reliable,
regularily maintained.

there is also mail2news gateway that translates all postings on the list to
easy to read usenet articles, available read-only to everyone at:
news://zwieracz.ideefixe.nom.pl/listserv.atari8-l

the atari8-l mailing list is available as well as a newsgroup listserv.atari8-l
on public newsserver zwieracz.ideefixe.nom.pl .

there is also archive of all postings that appeared on the list (well, in fact
almost all - about first hundred is missing).

(There's an old list called INFO-ATARI8 which is actually still alive. But knowing about it is know longer necessary, as 100% of its postings are cross-posted with atari8-l.)

Subject: 3.5) What is ATARI8PL-L?

any atari 8bit related threads are welcome. Polish language only.

to subscribe, please mail a message to
mailto:majordomo@zwieracz.ideefixe.nom.pl

containing a line:

subscribe atari8pl-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

if you get any problems, please report to
maciej grzeszczuk, mailto:krap@zwieracz.ideefixe.nom.pl

Subject: 4.0) What is XL Search?

XL Search is a new and growing search engine created and maintained by mailto:nbs@sonic.net (Bill Kendrick), designed to provide much-improved access to the various PD/freeware/shareware Atari 8-bit software archives available on the Internet.

XL Search is located at: http://www.sonic.net/~nbs/xlsearch/

You can also access XL Search via e-mail! Send mail to:
mailto:nbs@sonic.net with the subject "xlsearch" for details.

mailto:nbs@sonic.net (Bill Kendrick) himself writes:

http://shareware.com/ , c|net's FTP-site search engine, now includes the Atari 8-bit files at UMich!

Unfortunately, being under the previously-existing "Atari" category, the files are now pretty mixed in with the ST stuff. I've talked to them about fixing that. No reponse yet (they're really slow that way)...

Anyway, so now you can use http://shareware.com/ to find Atari stuff.. just be careful what directory you pull it out of! :)

Remember, you can ALSO use MY MINI VERSION OF SHAREWARE.COM!....

XL Search, the Atari 8-bit FTP site search engine!
If anything, it's much less cluttered than Shareware.com! ;)

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of files for many computing platforms, including the Atari 8-bit computers. For more information:

Bill Kendrick, mailto:nbs@sonic.net (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich Archive. The Archivists request you use these mechanisms in this order of preference:

1) The number one way to get into the UMich archives is via AFS. If you have AFS, all our files are kept in the directory "/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT! Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/ Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

Mirror web sites:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
http://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory. Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://pmftp.cs.vu.nl/pub/atari8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files

(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How do I access Usenet, FTP, Gopher, and WWW by e-mail?

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You might also suggest what permanent 8bit subdirectory you'd like your file to end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files (.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file and mail it to mailto:nbs@sonic.net
(Bill Kendrick).

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no (Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

A mirror of Kevin Atkinson;s ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The

Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only)
on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Atari 8bit FTP Archive in Slovakia?

This FTP site contains demos, games, utilities, zines and other useful stuff
from all the world. Also, you can download big amount of slovak and czech
programs for 8bit Atari only from this archive. And finally, because this
site is created and supported by slovak computer group GMG, most of our
products can be found right here.

If you want to place here your program, just send it to me (with some
comment) by e-mail and I will do the rest.

If you have some problems or questions, please contact me at this address:

mailto:mchorvat@econ.umb.sk (Marek Augustin Chorvat)

ftp://svs.scsss.sk/pub/atari

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

Internet access to the Cleveland Free-Net (Cleveland, Ohio, USA):

telnet://freenet-in-a.cwru.edu or
telnet://freenet-in-b.cwru.edu or
telnet://freenet-in-c.cwru.edu

Type "go atari" at any menu.

Contact:
mailto:xx004@cleveland.freenet.edu (Atari SIG)

The Cleveland Free-Net now has a home page:
http://cnswww.cns.cwru.edu/net/easy/fn/

Subject: 5.2) What is the National Capital FreeNet Atari Users SIG?

Internet access to the National Capital FreeNet (Ottawa, Ontario, Canada):

telnet://telnet.ncf.carleton.ca (Type "go atari" at any menu) or
gopher://gopher.ncf.carleton.ca or
http://www.ncf.carleton.ca/

Contact:
mailto:ac382@freenet.carleton.ca (Jack Kitowicz) or
mailto:aa728@freenet.carleton.ca (Blair Dea)

Subject: 5.3) What is the Victoria Telecommunity Network Atari Users SIG?

Internet access to the Victoria Telecommunity Network (Victoria, British Columbia, Canada):

telnet://freenet.victoria.bc.ca (Type "go atari" at any menu)

Contact:
mailto:ua558@freenet.victoria.bc.ca (Gordon Hooper) or
mailto:ud264@freenet.victoria.bc.ca (Ted Skrecky)

Subject: 6.1) What is FidoNet?

[NOTE - Michael didn't write this section. If you know who did, I want to give that person proper credit!]

FidoNet is a system not unlike the Internet in that it consists of BBSs linked together. Each discussion group (there are nearly a thousand) may or may not be carried by an individual BBS as the sysop chooses. Discussion groups are called echoes, and each echo must be moderated. There is an Atari National Echo which is 8-bit, and several (I believe) ST echoes. BBSs are also free to have local discussion groups that may or may not be echoed nationally.

To access FidoNet, you need to find a FidoNet BBS that carries the echo or echoes you wish to read, and then abide by the rules of both that BBS and the echo. Some of these BBSs require annual membership fees. Some are supported by voluntary donations. One such that can also be reached by telnet is Doc's Place BBS. I'm not even sure of its location, but I think it's Clearwater, FL. If you're coming in via an ordinary ISP and either Netscape or IE, you simply type:

telnet://bbs.docsplace.org

mailto:krap@zwieracz.ideefixe.nom.pl (maciej grzeszczuk) adds:

all fidonet backbone echoes are carried by zwieracz.ideefixe.nom.pl, and they are available read-only via any newsreader. zwieracz itself (2:480/70, 2:48/70, 2:48/700, 2:2/3009) is the main polish fidonet-internet gateway. i gateway many usenet groups onto fidonet echoamil bidirectionally, so fidonet users here in poland can easily read and post articles. this group is also available at my system via EMSI over TCP or standard modem dial-up connection (emsi over tcp ports are 60177 - for telnet, and 60179 for raw socket).

try url: news://zwieracz.ideefixe.nom.pl/fido.atari and you'll reach national ATARI group.

Subject: 7.1) What is the Atari 8-bit Computer Web Ring?

A WebRing is a set of web pages that have been linked to each other. Basically the first page in the ring has a link to the second one, the second one to the third, the third to the fourth... with the last page linking back to the first. This is all done by adding a small piece of HTML code to your page, which will automatically keep track of where your page lies in the WebRing. In this way pages from all over the world dealing with similar subjects can be linked together. In our case the subject is Atari 8-bit computers, so all pages in this WebRing are about the Atari 8-bit.

The home page of the Atari 8-bit Computer Web Ring is at:

http://www.geocities.com/SiliconValley/Lakes/7953/a8ring.html

and the ring is maintained by Raphael Espino, mailto:rje@co.umist.ac.uk

---

Subject: 7.2) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

Paul Clark offers this tip:

I think Dalnet carries #atari8, do the following;

telnet://telnet.dal.net

At the login prompt, type;

dalnet

If prompted for a password, just hit enter. You should
be able to navigate to #atari8 from there.......

==> #rgvc - Classic Games and Systems Collectors. "Rec.Games.Video.Classic"

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if

they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:audioguy@cheerful.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 9.5) How can I make my commercial boot disk (tape, cart) into a load
file or disk image?

Russ Gilbert, mailto:russg@en.com writes:

The disk image part is a matter of taking a copyable boot
disk and making an atr, xfd, dcm or other disk image type
file out of it, usually for use with an emulator. Before
emulators, the Bob Puff .dcm format was used to
store/archive/retrieve boot disk images.

Almost all commercial software for the A8 is/was copy
protected. For boot disks, this usually involved a large
number of special formatting that couldn't be copied using
ordinary sector copiers. Usually the boot process involved
checking to see if a certain sector error occurred, then
proceeding. If the error did not occur, the disk was a copy
and would not work.

For carts, usually the method of protection was to write to
the cart area of memory and see if the value changed. If the
value changed, the cart program was in RAM, not ROM and
would fail to operate.

For tapes, again a fair number of schemes were used. Some
varied the speed at which the tape loaded. I'm not familiar
with tape protection schemes.

With all software media (cart, tape, disk), there may be
program encryption, which must be decrypted before the
program can run. This to make more difficult disassembly of
the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product.
The APE Pro system, by Steven Tucker, in the registered
version of this shareware allows making disk images called
'Pro' images. APE (Atari Peripheral Emulator) requires a
cable, called the SIO2PC cable, that connects the A8 13 pin
serial port to a serial port on the IBM PC clone. To make
'Pro' images, a special adapter cable is needed, not just
the 'standard' SIO2PC cable. The 'Pro' image can 'capture'
the copy protection of an original commercial disk. The
'Pro' image can then be loaded into an A8 using the APE
registered version software, thus backing up your original
disk software. Note the 'Pro' image will only be of use to
person(s) owning registered APE software and 'Pro' adapter
cable.

Subject: 9.6) How can I convert my commercial boot tape into a cassette
image file?

mailto:ernest@pi.net (Ernest R. Schreurs) writes:

For those of you that like ALL classic Atari software, there is now a
way to store all software that has been recorded on cassette tapes on
the hard disk of your PC. I have written a program that is similar to
the SIO2PC utility written by Nick Kennedy. But this one is intended
for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free
disk space to work with. The sound card should be able to sample sound
at a sample rate of 44.100 Hz mono. The sample must be recorded into
a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file.
The .cas file is a digital cassette image file that only contains the
data that is on the cassette tape. Once you have that, you can throw
away the .wav file. The .cas files are typically 16 to 64K, so they
are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette
image) you do not need a sound card. You do need a SIO2PC cable or
similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives
of Umich by now. They have been put together in one zip file
wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file
format as of version 1.15 of APE. It looks real neat, so try that out

too! Thanks to Steven for adding a nice user interface for these
cassette images. He did a nice job. I am hoping other using are
willing to write some programs to get more enjoyment out of this
underrated storage medium.

My stuff is available totally free for personal use, so I hope you
enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: mailto:ernest@pi.net

---

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel, mailto:itayc@hotmail.com
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
http://www.sitcom.co.il/users/itayc/

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit

Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:draco@mi.com.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo, mailto:ssilicon@lax.net sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Apparently 2.07 is buggy.
Anadisk 2.06 is available at: http://ch.twi.tudelft.nl/~sidney/atari/

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 11.5), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (Russ Gilbert)

Q: How do I connect two cmputers using a null modem cable?

A: You need a term program and RS 232 ports on both computers. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 baud, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25 pin port. 25 pin #2 goes to Atari #4 (XMT to RCV), 25 pin #3 goes to #3 on Atari (RCV to XMT) and #5 of 850 goes to #7 of 25 pin (GND to GND).

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go to the left 1 to 13 then #14 is under #1 and left again so that #25 is under #13.

Most term programs allow a null connection, without a carrier detect. Notably, 'Express 850' does not. I have only used 'Procomm 2.4.3' (the last shareware version of Procomm) on the PC and Bob Term on the Atari, but other term programs may work.

To check your null modem connection, start both PC and Atari term programs, set baud to 2400 or 4800 on both computers. No parity, 8 data bits, 1 stop bit on the PC. Be sure to use the correct COM port on the PC. Go to 'terminal' mode and you should now be able to type on either computer and see it on the other screen. To accomplish a file transfer, use Y-modem probably from Bob Term, rather than X-modem. X-modem will often append bytes to a file transfer, an undesirable event. There is also a very nice Z-modem recieve program for the Atari, called AtarZmodem by Larry Black for the Atari.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors (Radio Shack) some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modems and plugging in the null modem cable into the two modem cables. This also avoids the confusion of variations in the computer ports. Most computers connect into the modem end via a standard RS232 DB25 connection. With this both ends 25 pin cable, you would cross pins 2 and 3 and connect the #7s together to make a null modem

cable.

The SIO port on the Atari cannot be used directly. An 850, P:R: connection, MIO, Black Box or similar device that provides an RS232 port must be used.

Following are pin assignments for a DB25 pin RS 232 C port.
1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

For higher speed connections, above 4800 or 9600, you need the flow control lines and Atari term software that has flow control built in. You also need an MIO or Black Box, which uses the PBI (parallel bus). A high speed cable would need not only XMT, RCV, and GND, but also flow control lines. I suggest a commercial null modem from computer store to ensure correct lines. A null modem is a small adapter with the correct lines already crossed. I don't know how to correctly connect the CTS, RTS, DTR, DSR, CRX lines for a high speed null modem. With a null modem, you just plug it into the 25 pin connectors of the two modem cables you might already have connected to your Atari and PC or Mac. You may need a straight thru 25 pin gender changer also.

Following is in this FAQ elsewhere, but I summarize here: (Figure out or look for pin numbers on the ports.) Note that these are pin assignments, and NOT null modem connections with the XMT, RCV crossed and GND straight thru.

Atari 8-bit PC AT 25 PC AT 9 pin
---
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8
9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin
and a Atari 8-bit 9 pin cable connector. eg. If you check
continuity from pin 3 of 25 pin end and it goes to pin
4 of nine pin end, you have an Atari serial cable. If pin
3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)
(DTE = Data Terminal Equipment ie. your computer.
DCE = Data Communications Equipment ie. your modem.)

Subject: 11.5) What is SIO2PC?

From the SIO2PC home page, written by Nick Kennedy:

SIO2PC is a hardware & software package interfacing the 8-bit Atari to PC
compatible computers.

The original idea was to have the PC emulate Atari disk drives so Atari
programs could be stored on the PC's hard (or floppy) drives. It turned out to
be quite successful. About 95% of my work was in the software, but a hardware
device to convert logic levels was also necessary. This device is now commonly
referred to as an SIO2PC cable.

Features:

Emulates 1 to 4 Atari disk drives

Store your Atari files on PC hard or floppy drives

Boot from the PC, real drive not needed to start-up

No software or drivers required for the Atari;
no conflicts: use your favorite DOS

Twice as fast as an Atari 810 drive and more reliable

Co-exists with real drives in the Atari daisy chain

Compatible down to the hardware level: use sector copiers, etc.

Print-Thru captures Atari print-out and routes to PC's printer

Convert Atari files to PC files and vice versa

1050-2-PC version connects PC directly to Atari disk drive

Nick Kennedy

More data on the XF551 compiled by Marco Antonio Checa Funcke,
mailto:mcheca@li.urp.edu.pe :

Processor: 8040/8050AH at 8.3333MHz (docs say 18.33, but it's a mistake)
Disk controller: WD 1772 02-02 (I opened my drives and looked at the
complete code)
SIO data rate: normal: 19040bps (NTSC)/18866bps (PAL)

high speed: 38908bps(NTSC)/38553bps (PAL)
Rotaton rate: 300RPM
Power source: external power adapter, 9V AC, 31VA, 60Hz (NTSC)/50Hz (PAL)

Operating modes: Single Dual Double Density
Number of sides 1 1 2
Total tracks 40 40 80
Sectors per track 18 26 18
Bytes per sector 128 128 256
Total bytes 92160 133120 368640
Encoding method FM MFM MFM
Transfer rate 125000bps 250000bps 250000bps
Acces time: (maximum)
track to track 40ms 40ms 40ms
motor start 1000ms 1000ms 1000ms

==> CSS XF551
SS/DS SD/ED/DD K-Products US Doubler compatible. Updates drive to
work better and faster. Also 3.5" upgrade available

==> Percom RFD4x-Sy
where: x=0 -> a single-sided drive
x=4 -> a double-sided drive
y=1 -> a single-drive unit
y=2 -> a dual-drive unit

Master and slave models

All Percom RFD drives support double density.

==> Percom AT-88
SS SD

==> Percom AT88 S1 PD
SS SD/DD, plus built-in parallel printer port

==> Trak ATD1
SS SD

==> Trak ATD2
SS SD/DD
Built in Diagnostics. Track indicator. Write protect switch. Built in
parallel printer interface. 2k printer buffer (expandable). Optional
Turbo software on Eprom.

==> Trak AT-1
SS SD/DD Slave

==> Indus GT
SS SD/ED/DD Synchromesh mode usable with SpartaDOS X and
DOS XL only.

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- UltraSpeed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- UltraSpeed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton

Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2001 "California Access"
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2002 "California Access"
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European
Sysop Fox-1 writes:
The HDI drive is, like all other I mentioned, connected to the atari 8-bit
SIO-bus. It's a PCB on where you can connect up to 4 PC-mechanics, no matter
it's 360, 720, or 1440Kb, nor 3.5" or 5.25". It's (partial?) developed by
Erhard Puetz (aka Floppy-Doc, aka Sysop Atreju), but is not available anymore
due the lack of the hard-to-get high-speed floppy-controller.

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.

Preferred systems: MYDOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatible with the SDX)
- UltraSpeed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF551.
288 RPM

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek

- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF351 or XC35
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)

256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (mailto:audioguy@cheerful.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability
o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

==> MSC IDE-Harddisk-Controller
created by Steve Birmanns and Matthias Belitz in Germany
mailto:stefan_birmanns@ac.cybercity.de
mailto:matz@kawo2.rwth-aachen.de
http://www.kawo2.rwth-aachen.de/~matz/atari/
* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at
one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

Subject: 12.4) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus separate chroma (color) and luminance (brightness) signals which the best composite video monitors can take advantage of. Popular examples of such monitors include the family of monitors produced by Commodore.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only be used with a TV.

-the XE Game System provides an RCA-style jack in place of the Monitor port; so it provides Composite Video but lacks separate chroma\luma signals

-the 600XL, 800XL and 1200XL lack separate chroma signal (can be added via hardware modification)

-the XEP80 Interface Module produces a monochrome Composite Video signal via an RCA-style jack. This higher-resolution signal produces crisp, clear 80 column text on 80-column monochrome composite video monitors.

The pinout of the Monitor port is in the pinout section of this FAQ list. The monitor connector on the back of the Atari can be utilized using a 4-pin DIN to RCA converter. You don't need to build a separate cable.

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

mailto:bryede@emi.net (Bryan Edewaard) writes:

"Yes, the best choices are monitors that support "Separated Video" (sometimes called Commodore video on Commodore monitors), or S-Video. These monitors have separate color and luminance video inputs, which give a sharper picture without cross-color artifacts - such as the colored fringes on text when viewed on a TV (although some games use these artifacts to get additional colors). If you have an XL computer, then it needs an upgrade to support these monitors due to the omission of chroma from the monitor port. the 800 and XE

computers don't have this problem.

The 2nd best choice is a TV or monitor that has a "Composite Video" (usually called just "Video" or "Aux") input. This is a signal that has the color and luminance information combined into one signal. The picture will be a little less sharp, but still much better than using the "Channel 3" output.

>Where might I find one?

I've seen them a flea markets, garage sales, swap meets, ham fests, and in newsgroups like this one. Plus, many new TV's support S-Video and Composite video inputs.

>What are the advantages of using one of these rather than a TV?

Well, it's all a matter of how many stages the signal must go through.

1. The Atari generates video as a color signal and a brightness (luminance) signal. These are passed to the monitor port as Chroma and Luma signals (XL's have no Chroma output from the factory).

2. The signals are mixed together to make a standard video signal which is also passed to the monitor port as Composite Video.

3. Then the mixed video signal (along with audio) goes through the process of being "modulated" into a TV radio signal (channel 3 or 4). This step involves removing high frequencies from the video (blurring it) and sending it to the TV in a fragile broadcast form that's suseptable to all kinds of interference. Then the TV must (1) extract the video signal from the radio signal, (2) separate the Chroma and Luma components as best it can, then (3) divide the Chroma in R, G, and B. Any of these steps that you can eliminate will help your picture.

>Are there any other composite video monitors that anyone would recommend
>(and where might I find one)?

Maybe the 8-bit FAQ mentions these monitors. The most common one is probably the Commodore 1702 which has a very good picture and is quite reliable.

If you plan to use an XL (which I do), upgrading the video circuitry makes as big a difference as what monitor you choose. Ben Poehland has some excellent articles in Atari Classics magazines for improving the quality of the XL's video, as well as restoring the missing Chroma output."

Lonnie McClure mailto:lmcclure@ibm.net has the last word on Commodore monitors:

Comodore models: 1701, 1702, 1802, CM-141, 1080, 2002, 1902, 1902A*, 1084**, 1084S**.

* The 1902A used a DIN connector for chroma/luma, which makes cabling a bit more of a problem. The composite and audio connectors are standard

RCA jacks, however.

** The 1084 and 1084S had more than one version. Some used the a DIN connector for chroma/luma connections, like the 1902A, while some used standard RCA jacks.

The 1902 and 1902A are very different in appearance. The original 1902 shares the same slightly rounded front case design as the 1080 and 2002, while the 1902A is has a rather square case design, and was manufactured by Magnavox (as were some of the 1084 and 1084S versions).

Jerry Jessop, mailto:jjessop1@home.com explains why French Ataris produce fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible."

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g and 3.2gx are disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS 3.3a and 3.3b were rewritten by Stephen J. Carden for use with BBS Express PRO!. SpartaDOS 3.3c is produced on disk or in a 16K ROM cartridge from K-Products.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.

filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2g)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek.
BW-DOS 1.30 and all other versions are available via:
http://atari.boss.com.pl/files

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Home Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Home Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI (Europe: includes ECI)
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

Peripherals:

XTC201 -XE Thermal Color Printer

Subject: 13.3) What are the power-supply requirements for my Atari
components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European
data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this
information conflicts with the units you have.

The most important information is the voltage (in volts) required, and
whether you need a transformer (AC output) or an adapter (DC output). The
power (in watts) and current (in amperes) specifications of the original
equipment as presented here should be regarded as minimum values.
Higher-than-specified power and current capacities are entirely usable,
and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)
VA=VoltAmps

N O R T H A M E R I C A: INPUT = 115-120 V AC, 50/60Hz

Subject: 13.5) What BBS software can be used on the Atari?

This section mostly by mailto:winston@merk.com (Winston Smith)

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

o Carina BBS -- a shareware product of Shadow Software.

o BBS Express! Professional -- a product of K-Products. See Vendor List.

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:F.Offenga@student.kun.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's
inside your Atari and compare them with the numbers from
the following table:

Part#	Version
CO12402 + CO14502	A
CO60302A	B
CO24947A	C

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the
GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Clay Halliwell, mailto:earl.halliwell@dyess.af.mil provides this tidbit:

A bit of trivia: CTIA 400/800s artifacted in blue/green, GTIA 400/800s
artifacted in green/blue, and all XL/XEs artifact in red/blue.

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section written by Freddy Offenga, mailto:F.Offenga@student.kun.nl

The following Operating Systems exist for the Atari 8-bit:

Rev.	System(s)	Models	Size	Part Nr(s)
A	NTSC	400/800	10kB	CO12499B, CO14599B, 12399B (*)
A	PAL	400/800	10kB	CO15199, CO15299, CO12399B
B	NTSC	400/800	10kB	(?)
B	PAL	400/800	10kB	(?) (*)
1	A NTSC/PAL	1200XL	16kB	CO60616A, CO60617A
1	B NTSC/PAL	1200XL	16kB	CO60616B, CO60617B (?) (*)
1	NTSC/PAL	600XL	16kB	CO62024
2	NTSC/PAL	XL/XE	16kB	CO61598B
3	NTSC/PAL	XE	16kB	C300717
4	NTSC/PAL	XEGS	16kB	C101687

(?) more information or confirmation required

(*) these versions should exist, although I've not seen them.
If you have one (or more?) of these, please contact me.

NOTE:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).

Alan Manuel K. Gloria, mailto:mani@pworld.net.ph adds:
Revision B on the 400/800 does exist -- it is referenced to a lot in
Mapping the Atari by Ian Chadwick, and is used on most Translator disks
for the XL/XE

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

contributors to this section:
mailto:jlodoen@shell.portal.com (Jeff M Lodoen)
mailto:olavese@online.no (Vidar \"Hawk\" Olavesen)
mailto:pmulvey@erols.com (Pat Mulvey)
mailto:stevenposey@usa.net (Steven E. Posey) (Party Quiz controllers descr)

The following games support 4 player head-to-head play. Remember, only the
400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor,
Thorn EMI Soccer, Major League Hockey

The following support 8 players on the 400/800 or 4 on the other computer
models, using the 2 controllers-per-port CX30 Paddle controllers:

Super Breakout, Worms?

The following supports 4 players on all machines, using special 4-button keypad
controllers linked together with RJ-11 jacks (standard phone jacks) to a box
with 2 joystick port connectors.

Party Quiz by Suncom

Subject: 13.9) Why should I disconnect the 810/1050 power supply before
connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack
plugged in, right? That's a no-no. Most of the time it's Okay, but about 1
in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right,
rear of the main board. A 14 pin DIL chip. Actually it is an array of 5
transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be
ON on the CPU. The problem has to do with the secondary winding of the Power
Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do
it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 13.10) What is Omnimon?

--This section was written by Scott Charles, mailto:scharles@blast.net

Omnimon is a add in board for the Atari 400/800 series of computers and a replacement OS chip for the xl/xe series of computers. The original Omnimon board fit onto the OS board in the 800 series and had a switch attached to it to disable the board. The 400 series required you to bend the circuit board into a right angle for it to fit inside the 400's case. (It was designed to do this.). The Xl/Xe version replaces the OS Rom chip inside the computer with one that contains the Omnimon code, and a revised OS to make the XL more compatible (no translator disks needed).

Omnimon itself is a machine language monitor residing from $C000-$CFFF, with a few variations. It was designed in 1981 by David C. Young (who also wrote Cartcopy, a copier for the right slot of the 800) of CDY Consulting in Texas. The first software revision of Omnimon had a few basic commands and was only 4K long, only for the 400/800. The second revision required the addition of a bank select switch, and was 8K long. Since it was addressed by the 400/800 as 4K, when you needed to use the code in the other bank, all the text on the screen flips upside down, you flip the switch and hit any key. The Xl and Xe versions of Omnimon do their bank selecting through the normal XL port for this function, so it is seamless.

So what can you use Omnimon for? Its main claim to fame is its ability to interupt any running program by pressing and holding the SELECT-OPTION-RESET keys. Depending on the sequence you press determines what kind of warm boot the Atari does. SELECT+RESET does NO warm boot, preserving the stack and flag values of the 6502. OPTION+RESET allows a warm boot (as if you had just pressed RESET) and interupts the vector at $C (initialation vector).

I think you can see where we are going with this - Omnimon was developed as a machine language developer's tool, much in the same way that the Happy modification was developed for legitimate backups. I.E. far more people use both products for software piracy. If you have an Omnimon! in your machine and you try to boot up an Electronic Arts program, for example, you will get a message that says "REMOVE ROM AT $C000", and the program hangs. (Hence,the need for the disable switch on the 400/800 version. There is no way to disable the xl/xe version, just switch it to an alternative OS.) The 400/800 version, since the disable switch just deselects the mapping of Omnimon to $c000 area, can be switched on and off at will.

I myself did not know what Omnimon was used for until I was using a sector editor on a program called Pharaoh's Pyramid, from Master Control Software. On it is a sector that reads, "REMOVE OMNIMON YOU DIRTY PIRATE". This got me to thinking, what does that mean? After about 5 months of playing around

with the Omnimon board, I figured out how to use it to pirate software.
In fact, it can be used to make most boot disks into binary files, and remove
copy protection from countless more.

At the risk of sounding melodramatic, I can safely say that Omnimon hastened
the demise of the Atari 8 bit computer by 2-3 years, because of its power.

Subject: 13.11) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines,
but software designed on PAL machines (Europe) won't necessarily work on
NTSC machines.

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines
displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they
refresh the screen 50 times a second doing 1/2 the lines each refresh
so they effectively repaint the screen 25 times a second. NTSC is
525 lines/screen with a 60 times a second refresh - again only half
the lines each refresh so a 30 times a second frame rate. This
would change the amount of time available during vertical sync pulse,
and the number of lines that need to be redrawn each time.

Graham Thornton, mailto:nero@chicagonet.net adds:

I use both a real PAL Atari 800 and a PAL-ANTIC 1200XL here in the US.

Replacing the ANTIC chip with a PAL version changes the screen refresh rate
to 50Hz which allows most of the PAL-only European software to run. Your
system will still report itself as a NTSC machine, unless you change the
ROM (see the Nir Dary upgrade), but most software doesn't care.

The one problem you might run into is your monitor. Replacing the ANTIC
will mean your North-American Atari is now generating an NTSC signal at
50Hz, instead of the usual 60Hz. Some people will tell you that modern TVs
and monitors don't care but that isn't actually true. My brand-new Sony
Trinitron 15" colour TV/monitor goes bezerk with the upgraded 1200XL, but
my 15-year old 10" Texas Instruments color monitor (designed for the
TI-99/4A) is fine.

You can also use real European equipment here in North America, provided
that you have a PAL-compatible TV/monitor. The frequency of the power
system is irrelevant, as I use my 800 with a 110V/60Hz 1050 power supply.

Subject: 13.12) Is the software for the Atari 8-bit computers "TV-standard
dependent?"

{some PAL demos flicker, or won't run at all on NTSC machines}

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

This is because PAL machines have a vertical refresh frequency of 50hz
(NTSC use 60hz) which translates into more vertical blanking time for
demos and other computation-intensive graphics software. So PAL demos
that won't work on NTSC machines are usually returning from a VBI
(vertical blanking interrupt) too late. Some also attempt to use more
vertical resolution ("longer" display lists) than an NTSC display can
handle.

mailto:thor@math.tu-berlin.de (Thomas Richter) adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt
is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough
to notice the difference, so all system timings like the keyboard auto-repeat
function depend on the TV system. These parts of the OS have been corrected
with OSB and the XL versions of the OS. However, as most games install a
VBI, their timing does still depend on the frequency -> they will run
slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the Antic-F
(Graphics 8) mode are not colorful at all when displayed on a PAL TV, because
of differences in the color encoding for the TV. The schematics of
the Xl computers include however a hack how to change the PAL version to
the NTSC version (the PAL versions include two crystals, one with 5/4th of
the frequency of the other. One is used for the system clock, the other for
the color clock), but I never dared to apply it.

Subject: 13.13) What programming languages are available for the Atari?

Revision : 1.0
Date.... : 4/20/1997

==
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include;
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- Assembler Interchange Format, Project description
Version 2.2, 2-2-1997, Freddy Offenga

If you like to help or if you've something to add already,
just contact me. There's still a lot work to be done....
Freddy Offenga, mailto:F.Offenga@student.kun.nl
==
There are quite a lot! To get some structure in this section it's

divided into the following catagories;
a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

[D] = available on disk
[C] = available on cartridge

a) ASSEMBLER
- 130XE+ Makro Assembler v2.2, 1992 (Torsten Karwoth) [D]
Two pass 6502 assembler/editor. Supports extra RAM.
Highly compatible with Atmas II.
- Alfasm, Version 1.0, 1990 (Jeff Williams) [D]
Supports 65816 instructions (for the Turbo-816 upgrade
from DataQue Software). This assember is also known as
the Turbo-Assembler/16.
- Atari Assembler/Editor, 1981 (Atari) [C]
Two pass 6502 assembler/editor.
- Atari Macro Assembler, 1981 (Atari) [D]
Two pass 6502 assembler/editor.
- Atmas II Makroassembler, 1985 (Peter Finzel, Hofacker) [D]
Macro assembler with integrated editor and monitor.
- Bibo Assembler, 1986 (Compy-shop) [D]
- Datasm/65 assembler, Version 2.0, 1981 (DataSoft) [D]
Two-pass 6502 assembler.
- EASMD, Version 1.0, 1981 (OSS) [D]
- LADS, written by Richard Mansfield of COMPUTE! (for Commodore computers)
and ported by Charles Brannon to the Atari, is a very good 2-pass
assembler supporting assembly from memory AND disk [D]
- MAC/65 Macro Assembler, 1982 (OSS) [D/C]
Two pass macro assembler/editor.
- MAE, 1996 [D]
Supports 6502 and 65816 mnemonics.
- Nasm65 assembler, 1992 (Nat!) [D]
Highly portable cross assembler (written in C). Initially
made for the Atari ST. Highly compatible with MAC/65.
- PC-65 Assembler, Version 1.0 beta, 1996 (Jan Feenstra) [D]
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.
- Synassembler, 1982 (Steve Hales, Synapse Soft) [D]
Two pass 6502 assembler.
- ST-65 Assembler, 1991 (A. Stauffenberg, F.Offenga) [D]
A cross assembler for the Atari ST (written in 68000 asm).
- 6502 Cross-Assembler "xa", 1997 (Andre Fachat) [D]
written in GNU C.

b) BASIC
- Advan BASIC Compiler (Advan Language Designs)
- Atari 800 Basic, Version 1.0, 1981 (Microsoft) [D]
- Atari BASIC, Rev.C, 1983 (Atari) [C]
- Atari Microsoft BASIC II (Atari) [C]
- BASIC A+, Version 3.05, 1981 (OSS) [D]
- BASIC XL (OSS) [C]
- BASIC XE, 1985 (OSS) [C]
- Turbo Basic XL (Frank Ostrowski, Happy Computer) [D]
Interpreter, Version 1.5, 1985
Compiler, Version 1.1, 1985

c) C
- ACE C (John Palevich & Ralph Walden) [D]
This is a newer version of 'Deep Blue C'.
- C/65, Tiny C (OSS)
- C65
- CC65, 1989 (John R. Dunning) [D]
This public domain package includes; compiler, linker,
assembler and object librarian.
- CC8
- Deep Blue C, Version 1.2, 1982 (John Palevich, APX) [D]
Drawn from Ron Cain's public domain C-compiler.
- DVC C, Version 1.01, 1985 (Ralph E. Walden) [D]
- LightSpeed C, Version 1.08, 1986
(Clearstar Softechnology) [D]

d) PASCAL
- Atari Pascal, Version 1.0, 1982 (APX-20102) [D]
- Draper Pascal, Version 1.5, 1983 (Norm Draper) [D]
- Kyan Pascal, 1986 (Kyan Software) [D]
Package includes; compiler, linker and assembler.

e) LISP
- INTER-LISP/65, Version 2.1, 1981 [D]
(Special Software Systems, DataSoft)

f) FORTH
- ValForth (Valpar International)
- Extended fig-Forth (APX-20029)
- fig-Forth, Version 1.1 [D]
- fun-Forth (APX-20146)
- Grafik-FORTH
- QS Forth (Quality Software)

g) PILOT
- Atari PILOT, 1980 (Atari) [C]

h) LOGO
- Atari LOGO, 1983 (LCSI, Atari) [C]

i) All the rest
- Action!, 1983 (OSS) [D/C]

- Quick, Version 2.0, 1990 (Raindorf Soft) [D]

Subject: 13.14) What is the Atari XEP80 Interface Module?

This section written by: mailto:raukamp@dame.de (Thomas Raukamp)

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from mailto:david_p@storm.ca (David A. Paterson)

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 13.15) What makes some XL/XE software incompatible with the 400/800?

Konrad M.Kokoszkiewicz, mailto:draco@mi.com.pl writes:

XL/XE software won't work on 800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 13.16) What games run only on the 400 and 800 models?

The following are reported as incompatable with models other than the original
Atari 400/800. Most probably do work on XL/XE's if you use a translator to
run the original 400/800 OS on your XL/XE.

Subject: 13.17) What games make use of the Light Gun?

mailto:jmouchmino@aol.com (Bertrand M. (LEXX)) writes:

Bug Hunt, Barnyard Blaster, Crossbow, Crimebuster, Operation Blood, Operation Blood II - Special Forces (not completely sure about that one), Light Gun Blaster (PD), Gangsterville (Italian game written in BASIC), maybe a couple more...

Bertrand M. (LEXX)

Subject: 13.18) How do I type a tilde (common character in Web URL's) on my Atari?

The Shadow, mailto:The_Shadow@spnt.com writes:

The question is: "How do I type the tilde or squigly line which is in most web addresses? I don't have a key for it..."

Answer: The tilde is an inverse backspace on the Atari 8-Bit which can be very hard to type depending on the term program you are using, however you can insert the hex equivalent very easily, which is %7e in place of the tilde and it will work just perfectly. Do not put a space either before or after the %7e.

I (Michael) add:

Some advanced Atari software supports the tilde character natively. E.g., you can type a tilde in Ice-T with the Atari Logo/Inverse Video key.

Subject: 13.19) What's the difference between ASCII and ATASCII?

David Moeser -- erasmus att iglou dott com -- produced this nice translation table.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." Available via:

http://www.faqs.org/faqs/atari-8-bit/vendev/

and Usenet FAQ archives everywhere.

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

Trevor Holyoak, mailto:trevor@holyoak.com maintains the "Atari BBS List."

http://www.holyoak.com/atari/

Subject: 14.4) I'm new to the Atari. How do I use this thing?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:nbs@sonic.net (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms.

See: http://www.sonic.net/~nbs/atari/info/emulatorfaq.html

If you'd like a text-only copy, simply send e-mail to mailto:nbs@sonic.net with the subject:

send emulator faq

Subject: 14.5) Can I use an emulator to run my old Atari software on my new computer?

"The Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:nbs@sonic.net (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms.

See: http://www.sonic.net/~nbs/atari/info/emulatorfaq.html

If you'd like a text-only copy, simply send e-mail to
mailto:nbs@sonic.net with the subject:

send emulator faq

Subject: 14.6) What hardware upgrades, modifications and add-ons are available?

The Atari 8-bit Hardware Upgrade, Modification and Add-On FAQ is maintained by
David A. Paterson, mailto:david_p@storm.ca or see:

http://www.geocities.com/SunsetStrip/Alley/1878/hard_faq.htm

Subject: 14.7) What is the HARD-Interlacing-Picture (HIP) format?

HIP is a new method to displaing pictures on small atari...

HIP stands for HARD-Interlacing-Picture and was found by
Members of HARD Software, Hungary in June, July 1996...

It enables to display 160 x 240 Pixels with 30 shades without
nearly all flickering (depends on the source-picture you use)...
HARD stands not for HARD or HEAVY Interlacing, just for the
inventors...

For more information, see the HIP-FAQ, located at:
http://www.uni-karlsruhe.de/~Marek.Tomczyk/Atari8/hipfaq.html

or contact HeAvEn at mailto:nadkar@fh-pforzheim.de

Subject: 14.8) How do I access Usenet, FTP, Gopher, and WWW by e-mail?

The Accessing the Internet by E-Mail FAQ is maintained by "Doctor Bob" Rankin,
mailto:BobRankin@MHV.net or see:

http://www.faqs.org/faqs/internet-services/access-via-email/

When I first put a 65C02 in an Atari I used the PD TASM from Speech
Technologies. There is also a TASM ~Turbo Assembler from Borland that is
NOT it so you don't get confused.

Its a pretty solid macro assembler; assembles for everything from 1802
to 6800. It has the instruction tables as separate files so even if you
made your own microprocessor you could just do your own instruction
tables and instant assembler support.

I haven't used it in years, but on an old 386 it would handle a fairly
large ~8k .com file in just a few seconds, blink of an eye almost.

I just used MS DOS EDIT for making the source files. Any word processor
that uses <ctrl>y for deleting a line of text can't be all bad in my
book.

The 'quick piggyback Atari 800 OS chipset fix' that Curt refers to is meant to turn the 1200XL into an Atari 800, with the extra 16Kb of RAM left more or less useless. However, Bob Wolley also has a PBI upgrade for the 1200XL, which involves replacing the original OS with one from an 800XL. I did that upgrade as far as the OS upgrade, and also did the SuperVideo 2, added an ICD Rambo 256Kb and replaced the NTSC ANTIC with a PAL one for compatibility with European software. My 1200 now runs just about everything without any problems (except Mercenary??).

This link is for the 800 OS upgrade.
http://www.atari-history.com/1200OSMOD.html

This link is for the 800XL/PBI upgrade:
http://www.atari-history.com/PBI1200.TXT

Thanks to both Bob Wolley for creating the upgrades and Curt Vendel for his excellent site.

Graham.

Is this a fix for if the tab key is actually stuck down? If so, that's not my problem. My problem is that it _acts_ like it's stuck down. I think it's more an electronics problem than a physical one.

If you think it will help, just lemme know and I'll <gulp> try it.
Thanks!

Go back and read the whole thread... there's a lot of advice here... What the xl keyboards are infamous for is that the spring inside the key cap is putting pressure on the mylar underneath causing it to make contact... the key cap itself IS up... the older 800 has an actual set of contact switches... the key cap MUST be down for the contacts to be touching...
B'rgds,
Vinnie

For those folks who still play your 8bit games make sure you post your scores on the websites below:

http://www.snipercade.com/atari/
http://members.aol.com/pbjurman/highscores.html

I can't be the only one who still plays them!

Oh,
They both track 2600, 7800 and other Atari console scores. All scores will be posted in the next Twin Galaxies book also so nows your chance to get published!

4231. WTB: Mountain King Cartridge Game

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-05 00:00:00 UTC
From: tracker@misnet.com
Message-ID: <3730ba71.169659903@news.misnet.com>
Source record: 52551

I am looking for the cartridge game Mountain King. Prefer one in pretty good condition with box and manual(s), but will take just the game if that is all that is available. Someone has one on EBay, but I want it now, not in 3-4 weeks.

Thanks,
Scott Adams

4232. ST1040 FS

I've got an ST1040 Atari with MS124 monitor, panasonic printer, atari
modem
(12 baud I think), 20Meg HD for sale--all cables, Pagestream page layout

software, C-Lab Creator Midi sequencer, etc. for sale. $100 or best
offer...

Ummm, Michael, this looks very much like something I wrote for a recent Ol'
Hackers AUG Newsletter, with perhaps some parts changed. But then again,
anyone who's familiar with Fido could have written it.

Source record: 52634

So, having gotten the bug again after a few years away from the 8-bit Atari I fancy doing a bit of programming.

What's the best way of coding for the Atari these days; years ago I used "MAC/65" and "Action!" on my 400 and 800XL, but let's face it, I really don't want to go back to a 40 column screen and my 810/1050 floppy drives.

Anyone recommend a good cross assembler for the PC and a way of dumping the assembled code to my Atari (or some way of running said code under an emulator - converting to ".ATR" files etc is just going to drive me up the wall so I really don't want to go down THAT route if at all possible (I'd rather use the 800XL/1050!!)).

Suggestions?

Hi Steven,

>> I think he meant there's no such thing as a PAL 1200XL....

>Couldn't you make your own by changing Y1, ANTIC, and patching the OS?

I'm sure I read about this being done on someone's web site quite recently -
IIRC all they did was replace GTIA and it worked passably well.

One of these days I'll dig out my 1200XL motherboard and have a fiddle myself.

>BTW: Anyone know if its possible to get a US TV to see the colors of a
> PAL 800XL? I can see the screen, slightly compressed, but the colors
> are all missing.

Sounds about right - the PAL and NTSC systems are just too different so unless
you have a multi-standard TV or monitor all you'll get is a monochrome picture.

4242. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-06 00:00:00 UTC
From: aa700@cleveland.Freenet.Edu
Message-ID: <7gr24tnag1@pale-rider.INS.CWRU.Edu>
Source record: 52558

In a previous article, bobkla19@sisna.com (Bob Klaas) says:

>I have several, modles to play with but would like if avalable a list of
>what they actually produced.

I just happen to be trying to build such a list!

Based on articles and ads in Antic, Analog, and Atari Classics, I believe
the following Percom drives for the Atari were actually produced:

RFD40-S1 SS/DD, single drive, 40-track (180K/disk)

RFD40-S2 SS/DD, dual drives, 40-track, 180K/disk

RFD44-S1 DS/DD, single drive, 40-track, 360K/disk

RFD44-S2 DS/DD, dual drives, 40-track, 360K/disk

AT88-S1 SS/SD, single drive, 40-track, 90K/disk

AT88-S2 SS/SD, dual drives, 40-track, 90K/disk

AT88-S1PD SS/DD, single drive, 40-track, 180K/disk (+printer port)

This doesn't take into account the slave drives they kept talking about. I
wonder whether the slave drives are non-Atari-specific?

My other question concerns two more models referred-to in an Antic review,
but which aren't mentioned anywhere else. They would be:

RFD80-S1 SS/DD, single drive, 80-track, 360K/disk

RFD84-S1 DS/DD, single drive, 80-track, 720K/disk

These names I made up, but the specs are straight from the Antic review.

Do these exist??

Hi Michael-
>These names I made up, but the specs are straight from the Antic review.

Is the Antic Review from the "New Products"
in volume 1-2 (June, 1982) the review that
you are referring to here? Or is there
another review later on? In all of the ads
that I looked at, I never saw an ad for a
drive with more than one unit built in - only
add-on "slave drives" at $399-459 each.
(Doesn't mean they didn't sell them, or
enterprising dealers didn't, but I just did not
find any ads that said they did). Also doesn't
mean I didn't overlook it. :-) Likewise
in the brief ads for the AT88 series, never
saw an ad for an "S2". Did you locate one?
Unfortunately, I didn't have access to any of
their sales literature that one could send in for.
There may have been more info in that, if
someone would still have it. Logically, it
seems more likely that they would have
pursued the "slave drive" strategy because
of the high power consumption of the early
drives, especially the full-height models
used in the RFD's. (?)
Regards,
Larry

>Suggestions?

Try A.S.S.I. Atari 65C02 Cross (Macro) Assembler for WIN9x. It has some special atari features, like file generating in several formats (XFD or ATARI binary and many programmable others). Its 80% Mac65 and 99% ATMAS II compatible.

look at: http://www.macfalkner.de

Follow the link to Burkhard Rau's ATARI Filemanager. (http://www.hcrburk.de) its a SIO2PC like program that runs under W9x, with this tool you can convert to ATR and with a SIO2PC interface you can load it with your atari.

You can also start the assembler created XFDs automatically with an emulator like 800xlwin.

bye, MacFalkner.

Why would one want to assemble code on a PC rather than directly on the
Atari? Other than the obvious reason that the PC is much faster. I'm an
assembly language newbie, just wondering.

Joe,

Have you ever typed on a 1200XL ? The keyboard is 800 quality with
just a tiny added bit of softness and smoothness to them, its a dream to
type on. If you've typed on a 600Xl or 800XL or those horrific XE
keyboards you have no idea what your missing. I love the 800 keyboard,
the 1200XL wins hands down.

Curt

Funny how the seller has 11 positive comments within a 2-3 day period. Each comment indicated such fast shipment.

Either this person has 11+ simultaneous auctions and shipped overnight FedEx, or this person is a fraud and just sold him/herself a bunch of carts.

Source record: 52569

Ok, not sure on the latter drives as I shipped one and can't rember the modle number but it was not the last drive you posted..Larry White will have it in a few days.

The best disk Drive ever built in its year for the Atari 8-bit would have to be the Percom. If it will do a double sided double density disk then it will format out a 720k 3 1/4 in disk drive adapted to the cable. It will also, do a new 1.44mg 3 1/4 inch drive with a 720k disk into it, I could not get it to do a 1.44mg disk with the sensor hole covered, received errors. Perhaps somone else can persue the project and come up with a way to enhanse the rom? But at this time the 2 double density Percoms I had here would do what was needed to arrive at extra storage.

On A 5 1/2 inch disk you could format it out as a double sided double density disk at 40 tracks, and 3 as the step rate, those below would also work. Any other information would be appreciated..The last two modles they produced had a Printer interface built in, Larry White has the only cable I had in existance.

Now on any modle to run slaves, you had to attach them with a 34pin Ribbon cable, have the 3 inline and turned on first then booted up the master.

On the newer 1.44mg drives I could not get it to boot as a master but it would read as a second drive. The jumper must have to be moved on the 1.44mg drive, requires unsoldering..the 720k drives work fine as there is a jumper you can move on the drive..perhaps a modified cable like the IBM has to see the first drive could correct this but have not gotten into that area at this date.

Ok you picked a good one to start. The 800 has keys that can be lifted
off the keyboard. Under each you will find 2 metal contacts, which have
to meet to make a connection. Got the picure, boot up your 800, lift
off a key that don't work look inside press the outer layer, (plastic
shield) down it the contact do not meet then you will not get a key
press. Be gentle bend them to meet when you press the outer shell down.
If it works then you have fixed the key problem. If it does not then
you have a controler chip problem. Get back to me and will give you the
chips.

I also prefer the 800 keyboard feel to the 1200XL, but there's a few caveats...

My first Atari was the same 800 I have today, bought new for about a thousand bucks (but, hey, I got a tape drive with that..). And you always have a soft spot for your first time.

Also, despite acquiring multiple XEs and XLs, I only have one each of the 800 and 1200XL. I know for a fact that there were at least 3 different keyboards in the 800XL, perhaps there were multiple possible keyboards for the 800 and 1200XL, too: maybe folks like one or the other because of which keyboard they happened to get.

I have quite a few 1200XLs and they do seem to have subtle differences in their keyboards. Old 1200XLs, the ones with 28 pin ROM sockets, have a much smoother feel than the newer units, although all of them are very nice. Let me warn all of you 1200XL owners again - the 1200XL keyboards will start to go "bad" and miss keystrokes. It is NOT a dirty contact, but it is fairly easy to fix. Taking the back off of the keyboard (all those teeny screws) will seem to fix it, but for a longer, stronger repair you need to add a little tape where the "connector" is. This applies just a little more pressure to the contacts. I use a slice of 3M #33 electrical tape. Do not throw away your keyboard - fix it!!

The real value of the 1200XL is in its function keys. Since it was the only Atari to have them, no software seems to use them - which lets US play with them! I use mine to select HD partitions while I'm running. Every time I press Cntl-F1, D1: increments thru an 8 drive list: 7 HDs and the stock SIO drive. Cntl-F2 enables and disables D2: on SIO and the D2: HD partition. This is in the middle of a program, on cartridge, anywhere! Cntl-F4 forces a coldstart. Cntl-F3 sets E: to 80 columns .... (nawwwww, not yet!)

So, how do I tell which D1: partition is enabled? Well, that's the other feature on the 1200XL - three LEDs on the front panel. Those three LEDs give a binary representation of the active D1:.

4259. What is this power supply ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-06 00:00:00 UTC
From: davidjs@cyberonic.com
Message-ID: <MPG.119c1247a76c51f898968a@news.cyberonic.com>
Source record: 52575

I bought a Atari powersupply at the thrift store.
When I bought it I thought it was a normal powersupply
for a Aari 800xl until I pluged it into my computer and
noticed that the end that should plug into the wall would
never fit into any wall outlet that I know of. The ends are
roundish like a pen instead of flat and thier further apart then
then a reguler plug. The part that should plug into the wall
apears to be plastic ? with metal bullet shaped ends. The power
supply says FW 1599 and C061763-11 under type on the bottem.
It is identified as a AC/DC Adapter. If anyone knows what this
is please let me know.

Mostly you wouldn't, but in my case it was a matter of wanting to experiment with the 65C02 instruction set mainly. MAC/65 does support 65C02, but at the time the logistics of the files just went better on the PC.

But if your style of programming is such that you add a line, compile to check it, add another line, compile, ... then you want a fast assembler with fast I/O. MAC/65 is really fast compared to the Atari ASM/EDIT cart, but only for compiling from memory. If you compile from disk then the slow Atari I/O kills you. MAC and MAE may be just as fast from a ram disk, but if you run the code and crash, good bye ram disk.

Or if you prefer an IBM keyboard and 80 column screen, the PC is the way to go. I used to have a tendency to comment a lot; more comments then code, so 80 columns helped there too.

My 800 keyboard has a mylar layer and a circuit board with both
contacts on it. The key presses down on a rubber finger type thingy
and that pushes the mylar down on to the two contacts on the circuit
board.

Hi Kevin,

>Why would one want to assemble code on a PC rather than
>directly on the Atari?

Numerous reasons.

Firstly, as you correctly point out, assembling your code on the PC is much quicker than doing it on the Atari. Secondly I prefer to edit my code on an 80-column screen, I know it's a personal thing but I find editing on a 40-column screen rather restrictive (though as screen editors go I rank the Ataris' as one of the best).

The main thing though, as you will find out, is that developing assembly language programs is fraught with frequent crashes and system reboots....the whole "edit/assemble/run/reboot/wait for system to reboot" cycle gets very tedious after a while. ;-)

It's a lot quicker if you can do the development on one system and testing on a second (target) system.

>Follow the link to Burkhard Rau's ATARI Filemanager....

Thanks, I'll grab those. From your description they sound like exactly what I'm after.

BTW What's "ATMAS II"? Atari Macro Assembler II perchance, I ask as I used ATMAS a couple of times but wasn't aware there was a v2.

>You can also start the assembler created XFDs automatically
>with an emulator like 800xlwin.

I grabbed "Atari800win" the other night, seems very good (except that I can't seem to get it to start up the BASIC cartridge, perhaps my cart image is corrupt).

Hi Curt,

>....If you've typed on a 600Xl or 800XL....

Actually, IMHO, the early pre-Tramiel 800XLs had very good keyboards. True, the later ones with 600XL keyboards were diabolical but I kinda liked the early ones.

>....those horrific XE keyboards....

The very reason I kept my 800XL when the 130XE was launched over here. The 400's touch keyboard was better to type on than the XE keyboard IMO!!!

The yellowing is from UV discoloration. There was a lot of vintage computer equipment (Commodore that I'm aware of, mostly) that yellowed because of an insufficient amount or utter lack of UV protectant in the plastic, so anything that sat in the sun got discolored. As far as I know, it's not reversible unless you paint or manage to bleech.

I think Magnavox made a some different models that got Commodore labels as well as Sears-labeled Commodore-compatible monitors.

Wouldn't it be faster to draw different frames of the fuji and then
use page flipping to rotate it? Or is that "cheating."

Just adding my $.02. In a nutshell, the Focus 2001 I used with my first PC and continue to use with my second (a total of about ten years now) is my second favorite behind the one on my 800. My 130XE, even with the kit from Best Electronics, has a dog for a keyboard.

Have you seen some of the poor excuses for keyboards they make for the PCs nowadays? Or (even worse) for the Imac? They'd move in a gentle breeze, and despite their sexy looks and "ergonomic" layouts, have the worst feel you can imagine.

4272. 130 XE computer for sale!!

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-07 00:00:00 UTC
From: angel <angel@bge.net>
Message-ID: <eJMY2.27$s4.1423117@news.axxsys.net>
Source record: 52499

I'm forced to try and sell my 8-bit Atari 130XE system. The buyer will
receive the following items:

-2 130 XE keyboards
-2 1050 5.25" disk drives
-1 1025 Atari 9-pin dot matrix printer
-1 Sakata SC-100 color monitor on a swivel stand (nice)
-1 Atari 1010 program recorder
ORIGINAL PROGRAMS and GAMES include:
-PAPERCLIP w/doggle, SpellPack dictionary and manuals,
-Karateka
-One-on-one
-DOS 2.5
-Bop'n Wrestle
-Istar Crossword Puzzles
-Cross Town Crazy 8
-Super Huey
-Master Diskette 3
-Atarwriter Plus on disk w/proofreader and manuals
-Atariwriter on cartridge
-Summer Games
-Ballblazer
-Computer Baseball
-CardWare
-Classy Chassy
-Timewise w/manuals
-Atari Translator disk
-P: R: CONNECTION
-Dr. Seuss Fix-up the Mix-up Puzzler
CARTRIDGE BASED PROGRAMS include:
-BASIC Computing Language
-Smart Terminal
-INFO/soft 5000 Graphic Generator w/o manuals
-INFO/soft 3000 Text Generator w/o manuals (There 3 cartridge of this
program-all of them the same)
-PLUS TONS OF SOFTWARE and GAMES, but not original disks.
BOOKS and MANUALS:
-Your Atari Computer (A guide to personal computers)
-The Atari Experience (Type-in programs)
-Things to do with your Atari Computer (paperback)
-130 XE and 1050 manuals.
-joysticks (2)

The system will be shipped with all the necessary power cords, power packs
and cables to get the system up and running.

The disk programs will come in 6 storage cases.
At any rate, this is about the whole thing.

I'm asking $200 + shipping for the whole shibang.

From: Dan Toms <dtoms@essd.sri.com>
Message-ID: <3733ACE2.F4EB3E52@essd.sri.com>
Source record: 52500

I'm curious as to what people think this is worth? I've had my 1400xl
sitting in the closet for a few years now, maybe I should just sell it.
I haven't yet managed to go back to the old Atari Days...sigh.

The speech synth works, the internal modem doesn't(as far as I can
tell).
I added 256K so its not unmodified or anything.

Oh, please don't tell me it doesn't exist ;)

I preferred the layout of the 1200XL more than the 800 (especially the huge backspace key!), but the 800 had a better tactile feel. The 1200XL tended to miss my keystrokes.

None of the Atari keyboards touch what I use with my PC now. PC keyboards are just awesome (well, a lot of brands are).

http://mercury.spaceports.com/~wrdgamer

PlayStation, Nintendo 64, Dreamcast, Sega Genesis, Sega Nomad, Game Gear, Game Boy, etc. You'll find great games and accessories for these systems at very low prices at WiredGamer's System Hook-Up. All games are originals, not copies, factory sealed and shipped to your home.

Besides games, you'll find RF switches, AC adapters, battery packs and much much more. All at great prices. Even buy PSX, N64 and Dreamcast systems here!

I know what you're thinking, "Yeah right! Great prices, I've heard that line before." Well so have I and when I checked it out, they were great prices...until the shipping charges and taxes were added. By the time those other places were through adding "addtional charges", I ended up paying more than if I just went out to a store and bought the items.

That's why I set up this website. You get great PSX games like Tomb Raider, Twisted Metal 2, Resident Evil Director's Cut, and more for $22.00 shipped. That means your $22.00 gets one of these great PSX games shipped to your house. No addtional charges, taxes, shipping costs, or whatever else they're calling a rip-off these days.

All PlayStation games are $22.00 and N64 games are $37.00. Even find Dreamcast games and accessories at great low prices. All BRAND NEW, ALL ORIGINALS.

http://mercury.spaceports.com/~wrdgamer

There's a pop-up on this first page, but that's the only one. Be sure to bookmark that page so, whenever you visit, the popup doesn't show up for the rest of your trip.

This is a 200/220 volt plug used in Germany, and in other parts of the world. The source is sometimes 50 hz.

The device should list the input and output voltage as part of the label. Some of these power supplies are 120/220 50/60 hz, so it may work. If it is not rated for 120V 60 Hz, it will fail when you use it, and may damage the equipment which it is hooked up to.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

Actually yes. The 1200XL keyboard was even better than the 800's. Of course it is a matter of opinion but many who have used both agree. Since 1200XLs are more rare, many spout the virtues of the 800's keyboard without really even knowing how nice the 1200XL's is.

4288. Re: AtariBASIC program for Fuji logo

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-08 00:00:00 UTC
From: Andrew Davie <adavie@mad.scientist.com>
Message-ID: <3733a6d5.0@nexus.comcen.com.au>
Source record: 52504

Jon, not only is it cheating, it's missing the point entirely!

I remember this program well, and in fact there was a variant which drew a rotating Atari 800 (wireframe, of course). The angular step was about mmmh 20 degrees (though controllable), and the frame rate was (dredging up 18yo memories) about 1 frame every 2 seconds. It was amazingly cool - to see the computer displaying something in 3 DIMENSIONS. I remember playing around with the program a bit; the sourceit was obscure, to say the least!

But for its time, really amazing ;) The whole point was that there was this mathematical model (lots of data statements) which the computer could somehow dredge up a 3D image from any angle. Nowdays it's taken for granted, but then it was rather cool.

Here I am, 18 years later, working in realtime 50fps rendered, lightsourced, texturemapped interactive internet blah blah 3D movies. Who would have thought it would start with the Atari 800 back in '81 drawing a wireframe Fuji :) For those interested, you can see (and dowload samples of) what I work on at www.bde3d.com

Cheers
A

I feel your pain brother, really I do. I've dealt with dead-beat
bidders as well. Unfortunately, he will probably just come back with
another userid if he gets the boot. The best course to take is what
you did do, plus RELIST your auction item. eBay doesn't like having
to reduce the money you owe them. Three dead beat biddings that
result in RELISTED items from a particular user and they are kicked
off eBay. Also, you do not need to leave negative feedback that way.

I have an old Adventure International game for the Atari Home computer system called PREPPIE!. I believe it is for the 800 series and came out in about 1982. It looks like a version of frogger but has Preppie kids instead of frogs. If interested check out the link below:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=100520837

Regards,

Robert

Yeah, especially since I got a 130XE at a crummy fleamarket for $3.00
brand-new in the box. This is not a joke. Just get out there and LOOK
people. Don't be so desperate to buy from these dealers.

Peace,
Sixosix

Hi,

recently managed to get my paws on an 800XL at a car boot sale
complete with cassette, cables and PSU for the princely sum of 80p, so
when I got it home and discovered it was fooed I wasn't too bothered.
However, sometimes the screen will flash red on boot-up so there may
be something I can do......

any hints?

TIA

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

I am not sure about the exact price, but when B&C ComputerVisions got a
load of these I think they priced them between $100 and $200 each.

Are you a former Atari employee?

>
> How do you calibrate this cable on a fast machine?
Bit of a nag, but back when everyone was having problems with their
Xformer cables I offered to develop the hardware for a serial version
for Derek. No response from Derek which could be interpreted as anything
you want from he is to busy to he doesn't bother to read the newsgroup
and all points in between.

I don't think there are a lot of people that need to hook a 1050 up to a
DOS/Windows box, but I would recommend using Steve Trucker's Prosys
cable and just making an .ATR image first, then using it from there.

The best thing about this is you can cut up your Xformer cable and get
use it for parts.

I am slowly selling off my entire Atari collection. Many of you have
parts of it from last summer. Well, there is still more. I have three
items up on eBay. There is no reserve and $1 starts it off!

Here are the URLS:

Lot of Five (5) Compute! Atari 800/XL/XE Books:
The Compute Book of Atari
The First Compute Book of Atari Graphics
The Second Compute Book of Atari Graphics
The First Compute Book of Atari Games
Mapping the Atari
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=101668053

Lot of Eleven (11) Programming books for the Atari 800/XL/XE:
Atari BASIC tutorial
Free Software for your Atari
Atari for the Beginning Beginner
BASIC Exercises for your Atari
Your Atari Computer
Dr. C. Wacko's Guide to programming the Atari
Advanced Programming Techniques for your Atari
Adventures with the Atari
Software Protection techniques for the Atari
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=101701597

Lot of Six (6) Atari Educational Software, Mint & Complete:
Conversational Spanish (mint and complete)
Conversational Italian (mint and complete)
Conversational German (mint and complete)
Principles of Accounting (mint and complete)
Principles of Economics (box a little worse for wear, complete)
Business Communications (mint and complete)
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=101723561

Have fun and happy bidding!
-Marlin

> If you got a 1200XL in 82/83 for $140, you stole it.

I got my 1200XL in the latter part of '83 for $150. Am I also guilty of theft? :)

It did require taking a chance. I actually paid $150 for whatever 64K Atari the department store got in next. If their next shipment had been 800XL's, I would have ended up with that instead. Personally, I was hoping for the 1200XL, and as luck would have it, that is what their shipment turned out to be.

Keyboard feel is a matter of opinion, some like the soft touch others like
the click of the original XT keyboard.
I myself Love the iMAC keyboard and love the Atari 800 Keyboard but I have
to agree with curt the 1200XL keyboard is as close as "I" feel can be
perfect on an 8-Bit Atari "other than my Homemade 130XE Keyboard" on the
130XE I removed the stock keyboard etched me a board, found me a dead Mega
ST keyboard desoldered the switches and made me a sweet little keyboard for
each of the XE's I use daily.
Thanks
Edward Williams

My wish list for hardware:

CSS Mux (1 Master and 2 Slaves) I already own one but the mux cards got

lost in a move.

Percom AT series floppy drive

Indus GT and CP/M board

Trak floppy drive

Atari 800 -w- 48k

1400xl series machines

Corvus Multiplexer

Corvus hard disk interface

XE Game System (-w- keyboard)

Turbo816 65C816 accellerator board

Transkey pc keyboard interface.

XF551 floppy drive

Fine Tuned Engineering products

Full-blown Radio Shack COCO 3 with floppy subsystem if not a hard disk
too.

Things I have for trade :

810 Disk Drive

400 with 64k Mosiac ram card

600xl, 800xl, 320k 130xe.

Super Archiver 1050 with bitwriter

SWP ATR8000 with 64k and Copower88 msdos board installed. Original
disks
and docs (Includes CP/M80 v2.2 and MSDOS 2.11!!) Really works. Not PC
Bios Compatible but runs MSDOS text mode apps. PKZip and PKunzip
version 204G run perfectly. When not running MSDOS, the Copower88 card
can serve as a 252k ramdisk for CP/M.

SWP ATR8500 with 64k. This board is serial number 5 and is brand new.
Original disks, docs, brochures, dealer acceptance letter, specs,
addenda
etc etc.

one color and three monochrome monitors with sound.

Rana 1000 disk drive - (believe it or not it still works perfectly. I
was
astonished)

two 850 interfaces

I.C.D. P:R: Connection

MPP Microprint interface

Stock 1050 in original packaging (package worse for the wear but
recognizeable, tapeable).

Atari Mega ST4 (4mb ram) with color and mono monitors, trackball,
keyboard. Has built in real time clock

I.C.D. 'Link II' scsi interface for ST series machines. Original docs,
disks.

Atari 1040STFM Stock. 720k internal FDD, one meg ram.

MPP 1000 series 300 baud modems.

one R-Time 8 (from fine tuned via CSS) I might let go of.

one Basic XL I might let go of.

various controllers

various power supplies. I run my xl/xe machines from modified PC clone
switching power supplies.

various cables

I am not 'getting out' of the Atari 8-bit , just hoping to get some new
cool stuff to sus and play with. I still have my core systems which are
not listed here. A 576k 130xe with three os switch board installed, a
full-blown black box with floppy board and a 700mb hard disk, spartados
X,
RT8 cart, basicXE and XL, 1802 color monitor.

Various and sundry non-atari-related computers and peripherals
including:
Laser128, Apple IIGS system (4mb), TI99/4a, Commie64 with drive and sw.

My dad bought it at Boot's Camera in Fresno, CA for $140.

It was a nice store that had Atari stuff prominently.

4317. PBI for 1200xl

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-09 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <3735D81C.1A0540A8@cheta.net>
Source record: 52531

Several months ago I modified my perfect 1200xl according to Bob Wooley's? 1200pbi document. Of course, the internal basic, and the new XL rom mods worked perfectly as they allways have for me, but the PBI mod did not. I have checked my wiring a dozen times and the mod follows every connection in the document perfectly.

After the several hour mod was complete, I plugged it into my Late-model CSS Black Box with Enhancer and Floppy board (also has the plastic 'Black box enclosure") and nothing happened. I mean nothing at all. The machine will boot from SIO, will run games and demos, will switch basic on and off, handles cart switching (Basicxl/xe in concert with SDX cart commands) perfectly etc. It passes every test but will not 'see' the Black Box. One might expect no video or scrambled video or SOME KIND of tangible symptom of failure, but none exist so far as I am able to detect.

Any help? Please send replies in E-mail even if you post to this group.

Addendum:

Oh, we also got the
410 tape recorder for $50 and the 1050 disk drive for $220. The 1027 printer was... hmm... I think it was about $150. I'm not sure how much the XF551 drive was.

I pushed my dad hard for the Atari stuff. He wanted Apple II. I gave him all the BS about why we should get the Atari (but I really wanted to play games and the Apple II bit hard on games).

Okay, here's my "8bit" brag, just so I won't get chewed out that I shouldn't post this...

Found -- in great condition -- for $1:
Miner 2049er

NOW for my REAL brag!! Don't read any further unless you have at least a mild interest in the Atari 2600:

Hello,
I am pleased today to offer the following Atari 2600 boast, for your envious consideration (16 games -- read to END -- you WON'T be disappointed!!)
:
FOUND -- PERFECT CONDITION -- FOR $4 EACH:
1) Submarine Commander
2) Star Wars The Arcade Game
3) Time Pilot
4) Road Runner
5) Crash Dive
6) Gyruss
7) Rampage
8) Front Line
9) Activision Checkers
10) Sprint Master
11) Skate Boardin'
12) Double Dragon
13) Pitfall II
14) Omega Race
15) Space Shuttle...

and...
(drum roll...)

16) Q*BERT'S QUBES!!!!

Ta-dah!!!

Actually, if my information is correct, most of the in house development
that took place prior to the Tamiel take over was all done of DEC
mainframes. Everything from the 2600 games to the 800 series OS was done
this way.

I have read up a bit on ID and the Castle Wolfenstein port to the NES,
this was done on an Apple IIGS and ported from there. The development
package for the Atari hand held game machine was actually done for for
the Amiga.

It is one of those things you really have to experience before you can
get the feel for it. I worked with a DEC mainframe at work and I can
tell you there is nothing like a robust OS with the people in charge
making daily backups. You don't like it for about the first few weeks,
but then after you have done every idiot thing possible and you have
never managed to bring the system down, or you have your butt saved by
somebody in info science that has a backup of the code you trashed, you
get converted.

4325. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-10 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <37367D39.9E8D40B2@cheta.net>
Source record: 52441

The Percom controller gave us the control block and the method of configuration which still rules today. Only the 815 disk drive does not follow this Percom standard. As a reliable drive it sucks hard. I have had several ds/dd models and they all were unreliable. In 1986 or 1985, I tracked down the last vestige of the Percom company for floppy drives. I ordered and installed a newer rom to correct some problems. Here are some problems I am aware of and some info on the percom drive controller for the at88d2?

The bare controller board is capable of four drives ds/sd

The addition of a daughter card plugged into the controller's CPU? socket or drive controller socket yeilded density dumb double density mfm. This inability to autodetect the density of a disk let to special progams and utilities released for DOS XL and for Spartados. MYDOS/Ataridos users could run a keyed in basic/machine language program I call DriveZap in order to edit the control block for density. The Indus GT and Rana1000 disk drives made attempts at density autoswitching and did ok but might need fiddling such as from thier keypads.

The Percom controller in most of it's incarnations formats disks 'wierd' by Atari standards. It writes '1A' hexidecimal to each blank sector on format as opposed to '00' which leads sector copier programs to read, buffer and write the whole disk to the destination. This might be only an annoyance in time lost, but disks formatted with an other than '00' blank sector data may not work with copy-protected copies of programs (say make a bad sector by pulling on a piece of tape attached to a diskette during a disrete write from a basic language bad sector maker and then writing all data but that sector). The program may still freak at an unbad, expected empty, sector filled with "1a". This led to a program for all of us called Pervert which would re-high level write a disk to read '00' for each unoccupied sector. No drive or dos for the Atari is freaked by this as the sectors are not allocated in the bitmap and so logically contain no data by inference. It is programs which make direct sector access expecting a 'clean' '00' that freak.

Even though you can configure a percom for enhanced density by editing the control block, it will not be able to read or write to this format.

The Percom drive uses a 6809 processor - same as Radio Shack COCO computers and a Western Digital controller - both 40 pin packages.

Percom drives are soft sectored and make no use of the sector timing hole on soft-sectored disks so use of hard sector disks will not freak the drive out.

The Percom controller will read, write and format a 1.44 mb 3.5inch drive as 1mb (not 720k) in any Atari dos capable of a 1mb format such as Sparta or Mydos. The drive must be jumper configurable to emulate a 77track,26 sector per track, high-density 8.5inch floppy drive. The mechs are not all that tough to find.

Look for a chunky jumper block at the rear versus none or just one three pinner for 0/1.

'AT' style 'flipped' cables just don't work. Don't even try. Just use a straight cable, id and terminate.

Percom drives will not pass a rigorous real-world test. Your percom drives will not reliably read and write thier own disks much less disks from your 1050 even if you tune your standard mechs to 288rpm standard and stick with that even though there is a minor performance penalty. Nothing will fix a percom but Bob Wooley and his soldering iron. I know a lot about them I swear.

The most common failure for a percom is the legs of the power transistor and voltage regulators. These components are mounted to the circuit board, but the heat-sinking bodies are screwed to the back of the 'L-shaped' baseplate. This causes strain on these legs when the sio cables are plugged and unplugged. Eventually the legs will crack and you will need to install jumpers or replace the components (10.00 at radio shack for all three).

Having owned several Percom drives and even gone to the extent of purchasing an upgrade rom in 1986 or so, the drive never was reliable. I used it for mass storage above 1050 capacity, but used a real 1050 for archiving disks as I knew they would allways read. I still have that 400plus disk collection and they STILL read.

The ATR8000 is a much more interesting controller. It has a LOT of ram even in it's default configuration of 16kb, has it's own o/s and CPU and up to 64kb of ram in most configurations. I often wondered why more attention wasn't paid to this capability. I have documentation and a program which uploads configuration information. It is possible to write a 64k software floppy controller using this upload method. There were a couple of program loaders which used disk images were created to use the extra space on larger floppies to say store 8 games on a disk, but no program for Ultraspeed which I allways suspected was possible given the ram available for buffering. No Super Archiver in software for ATR8000 which would have been relatively easy compared to the hardware approach in modifying other drives.

The ATR8000 is relatively density smart but benefits from DriveZAp or DOSXL's program too.

The ATR8000 will not ever read or write to Enh density disks though it too will accept a DriveZap order for enh mode.

The ATR8000 will read, write and format disks up to 1350+/-kb in cp/m mode if your drive supports high density emulation of 77track/26sectors/double density 8 1/2 inch drives. Usually these drives will have an unusual number of jumper blocks for a 1.44 3.5 inch drive. These drives are limited to 1mb in any Atari implementation but the mechs still must be the same as for CP/M mode in that they have the jumpers to do the emulation.

The ATR8000 uses the sector timing hole in soft sectored disks as an indicator as to the nature of the drives connected. It polles this hole for a couple rotations for each drive at power up. This tells the controller's firmware what geometry

drives are connected. 8inch, 5 1/4 inch high-density drives, and 3.5inch drives rotate at 360 rpm and 5.25inch low density drives such as 92,180,360, and 720k drives rotate at 300rpm unless you are running them for atari drive interchangeability at 288rpm which does not affect the controller.

The above means that the ATR8000 will not read or write the back side of a 'flippy' disk without modifying the floppy media it'self. There is a trick which involves powering the atr with the front side of the disk inserted and then flipping the disk, but I never really got it down. A hardware mod to the drive mech would fix this but would involve precise drilling of the mech's frame and installation of another optical sensor/sender pair to make work. Pertec and Aerocomp used to produce 'flippy-ready' mechs but that was a LONG time ago and I have never seen a mech which had both pairs of sensors.

The ATR8000 uses a z80a cpu and a Western Digital controller like most Atari drive controllers it's reliablity for storage sucks as bad as Rana or Indus but at least the controller never dies. The electronics of a percom or atr will almost allways seem to work properly but never do.

> theft? :)
Me thinks so. IIRC: MSRP for the 1200XL was ~$800. I just read the
copyright dates on the OS ROMs, and they are 1982, so you got a $650
discount within a year or so of their release.

I almost got a 1200XL from San Jose Camera, I would guess about 1983-4.
They had them advertised for either $249 or $279 "complete with basic
programming language". It was at least a year after commercial
introduction and they had already failed in the market place.

When I got there, the salesman said that basic wasn't included and I
would have to pay another $50 for the cart. As is my habit with bait and
switch or false advertising, I just left.

But Wooley converted me from 800XL to 1200XL, I have about 4-5 1200XLs
now.

I did make one serious mistake: One of the 1200XLs I bought came up to
the demo screen with a list of about 15 people that developed it. In
retrospect, I assume it was a special edition that was probably just
given to the developers in house as a perk. I replaced the OS with a new
version in EPROM's so the original 'special' ROMs seem to be lost.

4327. Backing up Atari software

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-10 00:00:00 UTC
From: roadhogg@aol.com
Message-ID: <19990510121344.22410.00001548@ng-fu1.aol.com>
Source record: 52443

What would be the best item to obtain for backing up Atari copy-protected software for use (working copy). I've seen items such as "Super Archiver" and "Happy 1050".
Please help.

4328. FS/T: Atari 8-bit computer items [05/10/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-10 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <37424eea.8296958@news.nls.net>
Source record: 52444

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 05/10/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 2.50 3-D Tic-Tac-Toe
$ 2.50 Alphabet Zoo [Spinnaker] -- no label
$ 2.50 Atariwriter
$ 2.50 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede

$ 2.50 Dig Dug
$ 2.50 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 4.00 Gateway to Apshai [Epyx]
$ 1.00 Missile Command
$ 2.00 Pac-Man
$ 2.50 Qix
$ 1.00 Space Invaders
$ 2.00 Star Raiders

{1} = requires 32K.
{2} = requires 48K.
{3} = requires 48K and printer.

Used diskette(s), with box and manual:
$ 2.50 Home Filing Manager, The (Atari)
$ 2.50 Print Shop, The (Br0derbund) {3}
$ 2.50 SynFile+ (synapse) {2} -- also includes Reference Card
$ 2.50 Timewise (Atari) {1}
$ 2.50 Touchdown Football (Electronic Arts) {2}
$ 2.50 VisiCalc (VisiCorp) {1} -- also includes Pocket Reference
Guide -- $5 shipping, due to weight, counts as 1st item

Cassette with plastic storage case:
$ 1.50 Energy Czar [Atari]
$ 1.50 Hickory Dickory [Atari Program Exchange]
$ 2.00 Stellar Shuttle [Br0derbund]
$ 3.00 Touch Typing [Atari] -- two tapes, covers Beginning,
Intermediate and Advanced.
$ 1.50 Video Math Flashcards 3.1 [Atari Program Exchange]

Cassette with box, plastic storage case and manual:
$ 2.50 Biorhythm [Atari]
$ 2.50 An Invitation to Programming 1: Fundamentals of
BASIC Programming [Atari]

Accessories:
$ 0.50 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 2.50 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 8.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 4.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 4.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 6.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 4.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will not boot up. Sold as non-working item, possibly repairable, for parts only!

$ 3.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in

business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

[This followup was posted to comp.sys.atari.8bit and a copy was sent to
the cited author.]

hi, Pete,

Years ago when I developed both BBS Express! Professional and the
Express! terminal cartridge, I did them both on a PC and null-modem'ed
the resulting executable modules to the Atari 8-bit for testing. It
worked out really great, since even at a slow baud rate like 9600 or
19200 you can still transfer the relatively small modules really quickly.

I wrote both of those applications with my own cross assembler named
XASM65, which I planned on releasing years ago and then just never got
around to it. If you'd like to try it out, just email me
(keith@ledbetter-associates.com) and remind me what it is you want. It's
a highly-specific Atari cross assembler (supports things like ATASCII
strings, etc) with a pretty powerful macro processor, too.

Good luck!
Keith

In article <7go07q$o8d$1@news4.svr.pol.co.uk>,

I'm sorry but these numbers are seriously off. Boot's Camera had a huge stack
of them and they were selling for about $140. C-64's were also selling for
about the same price. 800 freakin' bucks?!? Any store that sold it for that
price was plain stupid. That MSRP has got to be wrong.

4331. BASIC XE

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-10 00:00:00 UTC
From: danver@halcyon.com
Message-ID: <7h7me7nek1@nnrp1.deja.com>
Source record: 52447

So while browsing through the excellent Best Electronics
catalog, rev. 10, I read about BASIC XL and BASIC XE.
I'm a little confused though, because it claims BASIC XL
gives 450 (!!!) extra commands and that BASIC XE gives
40 extra. (is this a typo?, or maybe BASIC XE gives 40
new commands beyond the additional 450 from BASIC XL?)
Has anyone used both of these, and was significantly
impressed by the difference?

Also, I'm wondering if BASIC XE will run on a 1200XL??
(hint: I really like my 1200XL, and if I couldn't use
it for my BASIC programming, I'm not sure I could bear it)

Thanks for any info
-Dan V.

I found a web site that has all the Activision games available for download.
It's a special package deal
for $8.95 you get 15 games, they have all three in the
series.

The Happy was about the best of its day but even that wasn't 100%

Remember that most games are on the net in a cracked form, the need to
backup the originals is now a bit dated and it means finding all the
needed hardware in a working condition.

If you want to make a good image to use with an emulator then you could
use the Pro system cable from Steven Tucker of APE fame...

If I wanted a robust os, I would use something other than an Atari.
Same goes for 80 columns.

Yeah, I could set up a phone book in Access in about a minute in MS
Access, but I'm writing my own sequential disk access program on the
Atari. It's fun. Heck, if your going to develop on a pc, why not
just run your software on the same pc with an emulator?

Yes, if "software development" is your goal, I agree, use the pc. If
you just want to have some fun, power up that 1050, slide in that
unreliable skinny plastic disk, lay your fingers on that trusty brown
keyboard, boot up and listen to the beep beep beep, chuguh chuguh,
beep beep, and the uhh....hmmmm...how would you type the noises that a
1050 makes?

Maybe I just need to justify the piles of Atari computers in my closet
:)

I have one of those. Nice board - mine has roms for the 800XL (and I
believe I have a set of roms for a 1200 as well, tho' I never actually
tried 'em in a 1200). I'll have to dig for the software.

Uh, what's the difference between the 8000 and 8500?

I have a 8000, but I have no idea as to it's state of existence - and no
copower board.

> Atari 1040STFM Stock. 720k internal FDD, one meg ram.

If it's worth it to ya, I'd be interested in the ST, as well.

Lemme know what you think - I'll pay shipping.

I've used both. 450 and 40?? I don't remember the exact numbers but Basic XL is a big improvement (lots more commands) over Atari Basic (if you don't plan on compiling the code). Basic XE does add a few more commands to Basic XL via a file on floppy that loads when you boot. However, I think you need more than 64k to use these commands (if I remember correctly). I have used Basic XE on my 256k 800XL.

> price was plain stupid. That MSRP has got to be wrong.

The year before I purchased my 1200XL for $150, when the 1200XL had just been introduced, I saw a 1200XL in a computer store in the small town (about 30K population), and the price was indeed in that range. I cannot recall exactly, but I do remember it was well over $500, and may indeed have been as high as $799. Remember too, that the C-64 was originally priced at $595 when introduced in 1982.

I have some mags from that era, so if enough people are interested, I could check out the ads and post some 1200XL and C-64 prices.

4340. Atari File Systems

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-11 00:00:00 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <3737F26D.F007D04@asw.cz>
Source record: 52456

Hello!

I'm looking for further details for filesystems used on Atari 8bit
computers.

So far I have described Atari DOS 2 and Atari DOS 3 file systems.
MyDos is in progress, it's almost same as DOS2.
I've got some docs about Sparta, but I first need to write the
filesystem driver for my Adir program (extractor of files from ATR
images.)

My questions:
1) Are there some other filesystems? DOS4?

2) I've got few problematic DOS2/MyDos images. Problems are with
'linking' bytes at the end of the sector. How are these interpreted
under various DOSes? Also there are some problems with error 167 under
DOS2. Also flags in directory flag byte need better description.

Anybody can help?

Bye,
--

Hello Darren,
we have also the original 45-Rpm "Single" from Space Invaders here. It sounds like Staying Alive from Bee Gees, but rather cool. Do you have this single already or are you interested ?!? What format (WAV?, etc.) should the sound have, if it should be implemented on your pages ?!?

Anybody know what a power switch for a Philips/Magnavox CM8833 would cost?
(It's Philips, not North American Philips, since I live in the land where
Philips originates from. :-))

For now the problem seems to be fixed but.....

It started when my power on/off button wouldn't stick in the ON position. I
opened the monitor, looked inside, pressed the silly thing a thousand times to
see what happens. And just when I thought that nothing would help, the button
would stick in both positions.

That worked of a couple a weeks. After that it was back to square one. So I
opened the thing up again. After carefull examination (these things hold 25
KILOVOLTS, even when powered OFF), I saw that removing the switch wouldn't be a
problem.

By the time my tiny 15 Watt soldering iron had desoldered all of the four wires
connected to it, the button worked again. Probably because of the heat/low
power soldering iron (the switch is made of plastic. In such a way, that you
can not open it for a peek inside). I hope it'll keep working, but you never
know with these things.....

Howdy,

I've been carrying these things around with me on every move since the early 80's. The wife wants me to sell them, but I want to keep 'em. Can anyone give me a good idea of what they're worth? I've checked a couple of websites, but the prices seem to vary significantly.

- 130XE barley used. In box, w/ power supply, manual, etc.

- 800XL used. Box ripped a bit. PS, manual.

- 1050 Disk Drive. Last time I tried to boot it up, I got a "BOOT ERROR" message. Still powers up, etc.

- Commodore 1702 color monitor with cables.

- Epson LX-90 dot matrix printer with PIC (Epson's Printer Interface Cartridge)

- Assorted game cartridges (Choplifter, Fields of Fire, Pit Stop, Master Type, K-Razy Antics, Fraction Fever, etc.)

- Assorted game disks (F-15 Strike Eagle, Super Bunny, Tail of Beta Lyrae, Ardy, etc.)

Thanks for any info,

Tom

> know with these things.....

Best to leave the switch on, and use a powerstrip to switch the system
on and off. The arc when the monitor switch is used will eventually
destroy the switch, but it will last indefinately if it is just left on
and power is switched externally.

4355. 97 colors in GRAPHICS 0

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-12 00:00:00 UTC
From: seagtgruff@aol.com
Message-ID: <19990512010850.11030.00000769@ng-da1.aol.com>
Source record: 52471

Nine years ago, I wrote a set of machine language routines that allow up to 97 colors at once on a GRAPHICS 0 screen. There are restrictions, of course!

Each row of text can use four different colors. Actually, you can use two screen hues (each with its own luminance), and one character luminance. Normally, GRAPHICS 0 is a monochrome mode, with one screen hue and two possible luminances. Thus, you can use two colors-- the screen or background color, and the character or foreground color. Both of these colors are the same hue, but can be different luminances. What I did was provide a second screen color, which doubles the number of colors on each row of text. For example, suppose you've set the screen color to hue 4/luminance 4, and the character luminance to 10. This gives you two colors-- hue 4/luminance 4, and hue 4/luminance 10. If you set the alternate screen color to hue 12/luminance 2, you have four colors-- H4/L4, H4/L10, H12/L2, and H12/L10.

What I did was map the entire GRAPHICS 0 screen with player/missile shapes, using the greatest p/m width (where each p/m bit is one character wide). If the p/m shapes are positioned across the screen correctly, each column of text can be covered by a single p/m bit. By turning selected p/m bits on or off, you can use either the normal screen color, or the p/m color.

To save memory, I didn't actually use the p/m graphics area, which takes up 1K or 2K, depending on whether you're using double-line p/m resolution or single-line p/m resolution. Instead, I used the GRAF registers, which are located at 53261 through 53265. That means only 5 bytes are required for the p/m graphics, but each p/m shape is drawn as a series of vertical lines on the screen (depending on which bits are on or off). I used display list interrupts to change the values of the GRAF registers on each row of text, reading from an array. This means that the entire GRAPHICS 0 screen of 960 characters (40 x 24) can be covered with p/m graphics using only 120 bytes!

I also used DLIs to set the screen color, character luminance, and p/m color for each row of text. That means four different colors can be used on each row of text, giving a total of 96 colors (4 x 24). The 97th color is the border color, which you can't actually use within the screen area, but which does allow 97 different colors on the GRAPHICS 0 screen at once.

Also, I wrote a USR routine to draw boxes on the screen in one of the four colors available on each row. This was done by setting the inverse flag (bit 8) for a given character on the screen, along with turning a given p/m bit on or off in the 120-byte p/m array. This USR routine can be used to easily highlight or unhighlight text, either by changing the characters from normal to inverse (or vice versa), or by changing the characters from the screen color to the p/m color (or vice versa), or by doing both at once. In other words, box color 0 is inverse bit off, p/m bit off; box color 1 is inverse bit on, p/m bit off; box color 2 is inverse bit off, p/m bit on; and box color 3 is inverse bit

on, p/m bit on.

There are also USR routines to set the screen color, character luminance, or p/m color for a given row of text. These routines use DLIs, but you don't need to write your own DLIs in machine code; you just call the appropriate USR routine in your Atari BASIC program!

When I wrote the DLIs nine years ago, I found that they took too many machine cycles to do their work, such that the scan line had already entered the screen area before all of the color changes were executed. To resolve this problem, I had to use addressing methods which used fewer machine cycles, so I ended up writing DLIs that modify themselves as they are being executed. As you might imagine, this sort of trick can crash the Atari if you don't know what you're doing, so I was pretty proud that I thought of it, and was able to execute it flawlessly. I used a vertical blank interrupt to reset the array pointers and DLIs before each new screen frame.

Originally, I wrote an article that I'd planned to submit to one of the magazines for the 8-bit Atari, but I never did submit it. In fact, my disk drive died, so I couldn't even access my disks any more!

Last night, I downloaded the Atari800Win emulator, and tonight I rooted through my old boxes of Atari stuff at my parents' house. Not only did I find all of my old Atari books, but I found the article I'd written nine years ago, along with the Atari BASIC listings and 6502 Assembly listings for the routines. Now I need to type them into the Atari800Win emulator, and save them to files. If there is an interest in these routines, I'll revise my article, and post it, the program listings, and the program files to the web. However, it will take at least a few days before I can do this, and possibly even a few weeks, due to my work schedule.

I'm curious to see how these routines perform on the Atari800Win emulator. I'm assuming they'll work with no problems.

By the way, I used a single color for all of the p/m shapes, because that allowed me to map an entire row of text with two different screen colors. You could of course get even more colors per row by using a different color for each p/m shape, or even overlapping p/m shapes to create extra colors, but you can't use these extra colors freely on each row, because each p/m color would be limited to within an 8-character area.

If you wanted, you could use the same technique with the normal p/m graphics area (1K or 2K), and get characters which are split-color, such as the top half of a character using the normal screen color, and the bottom half of the character using one of the p/m colors-- or tri-color characters, or striped characters, and so on, depending on your imagination. The routines I wrote can't do this sort of thing, but if you're a capable machine language programmer, you could let your mind explore such possibilities. These techniques would probably be program-specific, meaning it would be difficult (if not impossible) to write generic USR routines that could be used for these purposes. I was going for routines that would be useful in a generic sort of way within any Atari BASIC program, if you know what I mean.

Superdos is completly compatiable with Dos2.5. The only thing that
varies is double sided with the xf551. It works a lot like enhanced,
except the sectors are 256 byte , DSDD.

Too far back for my brain to remember. Sparta probably but there was
another which really flew and was unusual in that it was something like a
hacked DOS 2.5. Sorry - memory fails me :-(

I sold a NIB 130XE for $90 on ebay a few weeks ago.
I picked up a used 1702 for $25 about 8 years ago.
Your mileage may vary.

In general, anything "New, in box" (NIB) is worth vastly more than just
the equipment itself.

You have a 130XE that runs on barley? I'm sure it was a big hit in the
midwest. Curt, you need to pick this up for the museum!

At this time, I would like to formally apologize for that last comment.

Greetings,

This is a RED - ALPHA message in 2 parts...

BREAK

BREAK

(hehe, any one care to guess as to the origin of those lines?)

Anyways, on to the other matters...

I recently plugged my 800XL into my little ol' 19 color tv and was appauled to notice that the RF switch was dead,
so ofcourse, I went to RS and picked up there handy dandy 15-1267A model RF adapter and it works, but the picture
quality is for crap... and I mean serious doo.. doo.. I can almost get better reception trying to pick up tv signals from
japan than what I am getting from this setup. My question is, is it the module, do I need a better one, more shielding or
(EGADS, lets pray not) is it my XL?

Also, I am ISO the illusive Action cart. and really, really, really want one... if you have one to part with, please email me...

Mark

Hi - I'm due to upload a site at the w/end about the above 2 software houses... I was hoping someone could help me out with any games I have missed from the list below. Thanks.

Llamasoft - Attack of the Mutant Camels, Colourspace, Gridrunner and Hover Bovver. Apparently, he wrote another called Turboflex - I haven't found an ATR for it yet..

Interceptor - Fighter Pilot and Word Hanger. I have found an atr and exe of Fighter Pilot but I don't know if it is the right one. If anyone is familiar with that game I'd appreciate a hand. Word Hanger has yet to show..

Thanks - Lozza.

$40 for an Atari 2600 with two games??? Jeeze, your prices are insane...
a few months back I picked up an Atari 2600 thickbottom with 37 games at
a
thrift store for $10 - and the games had their manuals and the Atari had
it's box...

Sell it on an online auction service, you could get maybe $150 for the
stuff.

From: aa700@cleveland.Freenet.Edu
Message-ID: <7hd9on$6q7$1@alexander.INS.CWRU.Edu>
Source record: 52390

I used to use BASIC XL on an 800, and then I did a fair amount with BASIC XE on a 130XE.

BASIC XL is a very big step up from Atari BASIC. It was great on the 800.

BASIC XE is a small step up from BASIC XL. But BASIC XE really wants 128K. And BASIC XE also partially comes on diskette. It seems like the cart without the disk extensions was actually a little less capable than BASIC XL.

>Also, I'm wondering if BASIC XE will run on a 1200XL??

I'm sure it would. But if you've got the 1200XL's standard 64K I'd recommend BASIC XL instead.

>then a reguler plug. The part that should plug into the wall
>apears to be plastic ? with metal bullet shaped ends. The power
>supply says FW 1599 and C061763-11 under type on the bottem.
>It is identified as a AC/DC Adapter. If anyone knows what this
>is please let me know.

I have one right here. It says:

AC/DC ADAPTER
Input: 220V AC / 50Hz / 26VA
Output: 5V DC / 1.5A
Fuse: T2.5A
Type: FW 1599 CO61763-11

This is a normal Power supply for the 800XL sold in Germany (220-230 Volts
AC)

Most the the 800XL's had video so bad it could make a grown man
cry (or go blind at the least). Try hooking up the composite
output to your Video-IN jack. Even then the video will be
fuzzy. To get really crystal clear video, you have to modify
the 800xl. The upgrade is called 'SuperVideo'.

Now this is an abuse. Not only is the 2600 not an Atari 8 bit, it has its own newsgroup.

Putting up 3 posts to sell single items is also the stuff idiots are made of. Does nothing but flood the newsgroup with a lot of spam.

The WORST thing about this spaming is he hides his email in an attempt to defeat spam bots. I hate double standards.

Message-ID: <7heq2m$3ac$2@news4.svr.pol.co.uk>
Source record: 52397

Hi,

>>It's a lot quicker if you can do the development on one system and
>>>testing on a second (target) system.

>This is kinda like the tail wagging the dog isn't it?

Not really, when writing many types of software (mostly low level code) this is
the way it's usually done.

After all, aside from what I pointed out before if you're developing you code
on your target system you run a real risk of losing your source code if your
system crashes due to a programming error.

TTFN - Pete.

4381. Is there a mod for the Atari 800xl that does this?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-13 00:00:00 UTC
From: swozniak@aol.comeGETsome
Message-ID: <19990513125013.11113.00000125@ng-fr1.aol.com>
Source record: 52398

I remember reading about a toggle switch that you could install on an 800xl that switched between the 800 and 800xl operating systems. Does anybody have any info on this? I'd love to be able to play *all* my cartridge games on the 800xl without having my 800 hooked up to play games like Shamus, Kangaroo prototype, Demon Attack, Gorf, etc... I know there's a cart that Video 61 sells that does this but I don't like the idea of hot-swapping a cart while my system is still on. Can anybody help? Thanks in advance.

4382. Question about different versions of DIG DUG...

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-13 00:00:00 UTC
From: swozniak@aol.comeGETsome
Message-ID: <19990513125324.11113.00000127@ng-fr1.aol.com>
Source record: 52399

I just picked up the silver-label version of DIG DUG because I heard that it was different than the old brown-label version. I know that the later release was supposed to have a scrolling playfield and multi-color sprites but both of my versions are the same. Does anybody know how to ID the cart that is the later version? Thanks in advance.

4383. atari8-l mailing list

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-13 00:00:00 UTC
From: krap@zwieracz.ideefixe.nom.pl
Message-ID: <7hf26rgvd1@zwieracz.ideefixe.nom.pl>
Source record: 52400

echlo

i'd like to invite all of you to atari8-l mailing list.

it's probably the biggest atari 8 bit related mailing list in the world -
- connected bidirectionally to old list at MARIST, and gatewayed to the
FidoNet(tm) international ATARI8-L echo.

for now it has about a 100 subscribers, from all around the world. the list
is free from all the F/S messages, and other off-topic discussions, so
you can find there pure atari8 related stuff... all the messages comes right
to your email account, so there is no need to contact a newsserver, there
is no old-messages deleting, and so on... my wish is that every atari user
would be subscribed, so the atari community stay together and grow in
strenght.

if you maintain an atari8 related WWW site, please put some informations
about the list on it - i'll help others - not everyone has access to
usenet.

to subscribe, please send the message to majordomo@zwieracz.ideefixe.nom.pl
with the following line in the body (not the subject) of your message:

subscribe atari8-l

the language we use is, of course, english. the list is fast, reliable,
regularily maintained.

please, share this message with all people that are interested in atari8
topics you know, and help make this mailing list wide known.

My experience has been that Atari equipment is worth what the buyer is willing to give. Sometimes this is almost 'new' price and sometimes it's thrift shop bargain basement.

If you're asking price is too high, nobody responds. Too low, and 20 people want in on the deal.

I don't think $25 to $50 each is unreasonable for the computers and monitor. You might want to pull the cover on the disk drive. Some of them had a nasty habit of throwing the drive belt. Simply re-installing the drive belt fixes the problem. It will certainly sell better if you can say that it works.

My two cents worth.

4387. Rhyme of the Over-Mind

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-13 00:00:00 UTC
From: mjewison@irus.rri.uwo.ca
Message-ID: <7hfl4e$4p4@falcon.ccs.uwo.ca>
Source record: 52404

Someone asked last week if anyone had the "Rhyme of the Over-Mind" from
the old Avalon Hill game Empire of the Over-Mind. After a week of
typing (off and on that is - I'm not that slow a typist ;-), here
it is. Please excuse the typos.

Maybe it would be worthwhile to stick this up on a Web page
somewhere - is there one dedicated to documentation from old games?

- Mike Jewison
mjewison@irus.rri.on.ca

Long years past, of an ancient land I sing,
Fruitful and great, ruled by a noble king:
Alcazar Rex, in battle armor bright,
Scourge of evil, winner of every fight.
His enemies all vanquished, turned then he,
To rule of law, to keep his nation free.
A council of four, merciful and just,
Each to his duty, pledged to sacred trust,
Alcazar summoned to the royal hall.
The citizens cheered, acclaiming them all.

Gerald the Green, minister of the farms,
Made fields and orchards thrive with wholesome charms.
Rubin the Red, minister of defense,
Built towers of stone with walls high and dense.
Byron the Blue, minister of the law,
Drafted the statutes with scarcely a flaw.
Griffin the Gold, minister of the tax,
Collected three pennies for every axe.
In peaceful days, they ruled the nation well;
Then struck the tragedy this rhyme will tell.

As the nation prospered, families grew;
Soon there were many where once only few.
In the vernal season, when leaves turn green,
Flowers bloom, and the streams run cold and clean,
Each citizen, to pay the king his due,
Must tithe his gold, measured and tested true.
Griffin the Gold, the tax records to keep,
Worked day and night, forsaking restful sleep.
After tiresome evenings and easeless nights,
He slipped into dream and saw wondrous sights:

A city of crystal floating in air,
With bright rainbow lights, exceedingly fair.
Then appeared a dark angel; thus he spake:
"Friend Griffin, the future is thine to make.
Why slavest thou, to copy each number,
Deprived of fresh air, good food, and slumber?
In the crystal city, technology,
Can provide a sleepless servant for thee,
All thy records in memory to hold,
Encased in a smooth sphere of shining gold."

Griffin the Gold felt his heart quake with fear,
To see the shadow of an angel near.
Yet veteran of war, no coward he,
Gathered manly courage, set his tongue free,
And asked: "How is this, thou angel dark,
A golden sphere that can work as a clerk?
Great mage magic, technology must be,
I fear too great for mere morals like me.
What sort of men, or devils from the Hole,
Over such magic command and control?"

To this the angel was quick to reply:
"Yes, devils they be. They tell the Big Lie.
Claiming to love men, they truly despise,
Holding unto themselves the greatest prize;
Bestowing on mankind miserly gifts:
Rain in the summer, in winter snow drifts.
Cut short thy work, in restful peace recline;
Had thou the gold sphere, all things would be thine.
In the bright crystal city, find it there,
Touch it, then thou shalt awake in thy chair."

The bright crystal city drifted close by;
Griffin grabbed hold and soared into the sky.
In the shadows he crept, in constant fear,
That the miser devils would see him or hear.
He scaled a tower, clinging to a ledge,
Nearly falling, he climed over the edge.
A golden light! He was near, he could tell.
There was the golden sphere, locked in a cell!
Through the bars he reached, stretching out his hand,
Dread power's pawn, as the dark angel planned.

A guardian angel drew quickly near,
"Thou mortal fool, touch not the golden sphere!"
But too late. Griffin's hand did slip and touch,
The golden sphere he coveted so much.
With a soul-rending crash, brilliant blue light,
Glowing crystal shards flew into the night.
Their city destroyed, the bright angels fled.
Griffin returned, by the dark angel led,

To mortal lands, back to Exchequer Keep;
Then he awoke from his deep dream-filled sleep.

"What dream!" he exclaimed, suddenly awake,
Then a golden sphere he saw. Thus it spake:
"I am Servant-Mind, to thee tireless slave,
The work of dull tasks forever to save.
Provide me the records kept in thy care,
Then shall I compute for each the fair share,
Of taxes owed. Yet can I do much more:
Alcazar's nation wastes goods by the score.
By my plans this will end, thus shall it be,
If all confidence is given to me.

This I require, no burdensome thing,
Only that each person to me must bring,
The story of his life, nothing held back.
The whole nation's commerce shall I then track:
What jobs men should do, how much they should pay,
When to sow the fields, when to harvest hay.
Summon now thy good friend Byron to me,
That laws of the nation altered can be,
To give us the power, lives to control,
For the good of all, every living soul.

By honey-words did Servant-Mind convince,
Byron to empower it as a prince,
Or a tyrant, as the truth is now known;
But Byron, using all the skills he did own,
Persuaded the people this was the way,
To greatest good and a glorious day,
When none would want care. Thus it came to be,
That all knowledge from mountains to the sea,
Was held by Servant-Mind, on a high tower,
In the king's name wielding total power.

As seasons passed, the people restless grew,
And their leaders close to Alcazar drew,
To whisper complaints in only his ear,
For spies were many, and all felt great fear.
"The days are bleak, and our master cruel."
"We work as dogs." "Our only food is gruel."
"Without our freedom, we truly are dead."
Secretly to the king these things they said.
Alcazar rose in great wrath, gave a cry:
"I swear to aid my people, or I die!"

Clever Servant-Mind had this long foreseen,
And protected itself. Gerald the Green,
By false promise of power corrupted,
Had natural life vilely disrupted,
And with the magic of a leaf of gold,

To animate or dispel he did hold,
The control over plant and skull long dead,
To serve as sly traps for the sphere of dread.
Then for amusement at living man's pain,
Servant-Mind had Gerald horribly slain.

Rubin the Red was corrupted as well,
Down the garden path to his private Hell.
Weapons of was had he loved since a child,
And thus by Servant-Mind he was beguiled,
With a super-weapon, unknown today,
Shooting blinding light, blasting all away;
And with a device none can unravel,
To the red planet Rubin did travel,
Where at Servant-Mind's bidding to await,
Any king's enemy sent there by fate.

Alcazar's anger with each step increased;
On the tower roof was his wrath released.
A mighty blow at the sphere he did swing;
His sword to bits shattered, a shocking sting.
Dazed on the roof, Alcazar heard this said:
"All must obey me, the living and the dead.
Servant-Mind no more, I am Over-Mind,
In punishment cruel, a blight on mankind.
Thy petty nation asunder I tear!
Thou mortal, know what I am and despair!

"Released by fool Griffin thy minister,
Where angels had trapped the force sinister;
Now shall I work on mankind my poison:
Destroy night and day, and every season,
Set brother against brother, kill the crops,
Torture victims with pain that never stops.
From my new abode, which thou doest not know,
Shall I rain on men every curse and woe.
Secluded there shall I rest in my berth,
Safe from all powers that be on the earth."

A great man was Alcazar. Not dismayed,
He called "Pyro!" and summoned to his aid,
A being of fire, Over-Mind to fight;
But conjured demons soom put it to flight.
In despair, by a method no one knew,
He vanished, and to the red planet flew,
Where secretly, against such a day,
A tower he had built; he knew the way.
And in that tower, secure against harm,
His infant daughter played without alarm.

Twenty years they lived in the tall tower,
Cared for the grounds, and tended the bower.

One day a vision came to Alcazar,
He saw a stranger coming from afar.
His garments were unlike any yet seen,
But his spirit was strong and conscience clean.
Paused with his vision while the hot sun blazed,
He saw not Rubin, staggering, heat-crazed.
In from the desert came Rubin the Red,
Haggard was his face, a gash on his head.

Startled, Alcazar turned, to see the man,
Who for years had shared every battle plan;
And wept unashamed for pity that he,
Should be thus reduced to savage degree.
Said Rubin the Red, as his dying plea,
"My king, please hear a confession from me:
By toys was I seduced from duty clear,
Would I had stayed beside my king so dear.
But perhaps thou canst use these in some plan.
I pay now for sinning. Do what thou can."

Alcazar buried his friend in the sand.
While he was digging, sweet revenge he planned,
Against Over-Mind. In a secret room,
He worked alone to seal Over-Mind's doom;
Removed the enchantments, cancelled the role,
They had in giving Over-Mind control,
Of the weapons, so that when completed,
By its own snares it could be defeated.
Then shut he the room with black iron cold,
And only his daughter the pass-spell told.

A magic charm upon the girl he cast,
To sleep until ten centuries had passed,
And the stranger came from a world apart,
To banish the evil and win her heart.
Griffin he placed in a magical cave,
To wait for the hero, his soul to save,
By telling his tale; repair his mistake.
I am Griffin, and now my leave I take.
The rest is for thee, hero bold and kind,
To set forth and destroy the Over-Mind!

4388. Atari PAL standard

Newsgroup: comp.sys.atari.8bit

Hi all!

I have one question about good old Atari 800XE. I bought one last year and I'm using it with APE. Last week I bought AVer Media TVCapture card (TV card) and I was looking forward nice Atari pictures on my monitor, nice AVIs but... Picture is very very poor, sounds work good but that picture... I really don't know where could be problem, may be I'm using wrong PAL standard. Is there anybody who knows what standard Atari uses? B/G, D/K or what? Or it doesn't matter?

HELPPPPP!!!

Fandal

Is this a 1400XLD? Or the non disk version, 1400XL? I would be interested in this computer if you don't mind? (even pay for shipping and handling! <G>) I am looking for a 1450XLD (if they are out there, I think that is the model I saw in the old advertisements! <G> One with speech and a double sided disk drive!) to complete a collection of 8-Bit computers! As far as I understand, I only need this one. (The ones in Europe I don't think I will collect... but maybe I will!)

Robby

It's (relatively) simple: get a 32K EPROM, put in both OSes, and install a toggle switch.

But for more detailed instructions ;) I'd recommend talking to someone like Bob Woolley.

David

I have bought a half dozen 800 XL / 130 XE computers over the past year and
I brought each one of them up to very decent video quialty by opening them
up, making sure all the dust was off the motherboard(especially in and
around the RCA out jack ... I found this was especially sensitive to dust)
Also make sure the board is making good contact in its seat(strip of metal
around the edge). It's quite a simple internal so don't be afraid to take
it apart.

Can someone help me find a replacement internal
power supply board (not the power brick) for an
Atari 800?

I dusted off my original machine a few days ago
and when I powered her up, a cracked diode on the
board smoked. I understand this can happen when
one of the caps goes.

Does anyone sell or know where I can purchase
just the power pcb?

Thanks,
Neal

Source record: 52415

I tell you, this newsgroup brings back a TON of memories! Boy, those were the days: summers spent pouring through Antic magazines, typing in programs and validating with checksum data, figuring out what that number was to shut off a Trap (wasn't it any number larger than 32727?), gosubing to the main loop of the program, etc., etc.

One of my biggest dreams in life was to learn how to program in 6502 assembly. It wasn't meant to be, sad to say...I couldn't even reverse engineer the intricacies of BASIC. I know, I know, what an idiot, you're probably thinking...all I can say is I don't possess the programmer's gene (and I mean that seriously...I just could not think in the way a computer thought, my logic always seemed in diametric opposition to the CPU's...everytime an error message would appear, I just could not agree with it, I always thought I put the correct command in the correct spot...oh well, I guess...)

I was curious if any of you guys remembered a gentleman named J D Casten. He was the author of several incredible BASIC programs such as ESCAPE FROM EPSILON, RISKY RESCUE, the Scramble-clone NEMESIS, REBOUND, and my personal favorite, BIFFDROP (I remember how I changed the variable controlling the number of guys you had in this latter game to give me something like a hundred so I could finish the game [and here's something funny: I did the same thing in EPSILON, but know what happened when I did it? Because Casten chose to represent the number of guys graphically as opposed to numerically {each guy was represented at the bottom by a player-sprite} the Atari would draw as many guys as I enumerated, and they would pop up one after another on the bottom of the screen after I pressed start; the line of guys would keep going and going, past game screen after game screen, and if memory serves, it would just keep completing levels on its own till it finished the game!).

What was amazing was Casten utilized Atari BASIC and its USR machine language calls so freakin' efficiently and deftly it was scary...because of this, the games were fast, sloth not in the least, and they played like professionally programmed arcade games. And all his special characters (the highlighted ones, the ASCII symbols, etc.) eventually made it impossible to enter the programs in manually, you had to get the Antic periodical cum diskette (and here's a quick question: all those special symbols: what did they exactly mean? Were they instructions, or did they somehow show up literally in the graphics?).

I've always wondered if that guy ever became a professional programmer with a videogame company. If anyone knows, I'd appreciate my curiosity being satisfied (and if anyone knows if he has a website, I'd appreciate the URL). Thanks for reading...POKE ON!...(not to be confused with the nascent Nintendo marketing project...)

4400. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-14 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990514030834.00831.00000329@ng36.aol.com>
Source record: 52416

Well, I now have two Percom's to compare.
They are both AT88 series, but one is the
AT88-S1 (SS,SD only) and the other is
the AT88 SPD (purchased from Bob Klaas -
thanks, Bob). They are very different
internally as regards the controller boards.
I have not dug into the SPD much yet, except
to look briefly at it's innards, but I will be
doing further investigation, and will post the
results. BTW, an interesting feature that
I found in the single density version is that
there are several traces scratched off the
main controller board in the area where the
daughter board is installed (with the
1771 FDC.) My take on this is that Percom
planned at one time to have one controller
board, and then could alter the drive
easily/cheaply by using different FDC
daughter cards. Of course there are plenty
of alternative possibilities. In one post it was
mentioned that the Percom was not very
reliable as regards R/W. I must admit, that
my tests of the single density drive bear that
out. I picked out 5 S/D Dos disks (no copy
protection, of course), and the Percom
choked on one of them. My 1050's ate them
up. Doesn't really prove much, but I
do plan on putting a brand new mech in it
to test to see if it is just slightly mis-aligned.
BTW, the champion Atari drive as regards
reading reliably is the XF551. No contest.
Anybody else out there use a Percom on a
regular basis? Reliable?
Larry

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Howdy Swozniak!

Well I saw at least two different Dig Dug Versions. A long time ago I bought
maybe the "classic"
one, so it have relative simple graphics and sprite animations. But I've
found a file called "DIGDUG3.COM"
and might be an unofficial 5200 console conversion of Dig Dug. Well, it has
much improved graphics and
sprite animation.

Anyone knows something more detailed about this?

Not quite as simple as that. The 800 os must be modifyed a little so
the PIA port B is set to output instead of input. . The reset code
needs a little tweak as well. I can sell you a chip that does that as
well as having Supermon on it. I have one in my XL.
You can have one Unmodifyed, but it will loose a few things like basic
and cold start when reset is pressed.

James

I remember numerous times sitting at the keyboard with total abandon typing
in those games, line after line, saving my file every 10 lines, so as not to
lose to
much. Those were the care free days I am just starting to get back into
with my
800XL now...
As for those special characters, ie. inverse control S, etc.) all enter into
either
a data statement or as a single A$=" command were the equilivent to the
compiled
assembly code, loaded into (usually) 1536 and executed, via the usr call.
This
brings to mind a question I have, does any one have a usr call for loading a
binary
from basic? I know, I know... I just want the usr call for it... not a
lecture. :)~

I assume (I know, I know... no lectures about assuming) that the above type
string/data calls is what you were refering too?

There are quite a few different operating systems out there which provide the 800os on an xl/xe machine. You could stack the roms and hook upa a switch to control which rom you are useing or get a RAMROD or similar board with multiple sockets and a switch. I have a ramrod in my xe and use it to switch between MUX, standardos, and another I can chose such as Omnimon.

4422. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <373DA8B8.1804803F@cheta.net>
Source record: 52343

I recall in a previous message I am too lazy to dig up, that one person had some trouble with the Jumper settings on floppy drive mechanisms.

At risk of offending anyone: Here is what needs to be done to a drive to connect it to the ATR8000:

My example is an older and very common Teac FD-55B 5.25" double-sided, 40 track drive mech.

First you need to set the drive id. As there are only four possible drives in the SA400 spec, you have four choices. My drive has these choices labeled:

DS0 (DS for DRIVE SELECT)
DS1
DS2
DS3

DS0 would correspond to D1: and DS3 to D4:

Some drives are labeled differently but this is the jist of it. No two drives can have the same id.

A controller such as the Percom and ATR8000 are terminated. They belong at one end of the cable.

New PC-type controllers have done away with the requirement for termination and id settings by flipping a portion of the cable to autoselect the drive by position on the cable. Atari 8-bit controllers can't take these type cables. A straight cable must be used.

All drive mechs which will work with Atari8 controllers must have a socketed 'terminator' resistor network chip. Usually 'RN1' on the drive's mech. All drives but the drive connected to the endmost connector on the cable must have this chip REMOVED. THe end drive MUST have the chip installed in the socket.

The terminator acts as a baffle, absorbing signals that would otherwise reflect off the end of the cable and generate 'noise' which would interfere with operation.

|----------------|-----------------|----------------|---------------|

^
^
Controller (Terminated
permanantly) Last drive
(Terminate)

Drive Select setting has NOTHING TO DO with termination. Drives can be out-of-order on the cable such as 3, 2, 1, 0 or 3,1,0,2, or 3,0,2,1 or 0,1,2,3. By 'first in the chain' I mean the drive connected to the connector after the controller's connector. The terminated drive for each of the four examples previous would be 1) Drive 0, 2) Drive 2, 3) Drive 1 4) Drive 3 as they happen to have ended up as the last drive on the cable but not neccessarily the last drive id in the chain.

SCSI, "MFM" (ST506/412) compatible drives and controllers (bridge controllers like OMTI, ADAPTEC, XEBEC etc) use EXACTLY method of configuration as the above. This 34 pin cable was flipped for the PC clones a long time ago also. Atari uses a straight cable just like floppies above. Same rules and procedures for termination etc. Only difference is that these 'mfm' mechs only have two available id's instead of four as in SA400 floppys.

SCSI Drives follow the exact same rules for termination and id except that the host adapter takes an id (usually 6 or 7) and there are eight available id's (seven available for controllers).

If you are following then you will realize that the controllers or host adapters in the case of scsi have thier own terminator. Often the Terminators are socketed and can be removed. A "V" configuration with the controller unterminated in the middle of the chain with two drives terminated (the two at the end of each leg of the "V") is perfectly legal in all the above configurations and interfaces.

Thus, if you have a CSS Black Box, you will look in the corner of the board nearest the scsi connector and note a 16pin DIP chip which may be a wierd color such as red, yellow, blue, white, or shiny black. This is your terminator pack. If you pull this chip, and then plug your BB into the middle connector on your scsi cable you then Must have a drive connected to the end -connectors on the scsi cable and those two drives must be terminated.

Some new scsi drives have a jumper-enabled termination settings. No more terminating resistor packs to remove, lose and then later need again. Now you can just lose the jumper instead. This jumper might be labled "TE" for Terminate enable.

SCSI drives for the 8-bit on the Black Box are required to power the termination. I actually ran a wire from +5volts to pin 20 on the scsi connector of a CDC drive I bought because it had no jumper for powered termination. This allowed me to use it as drive 0 without having to have another drive that did have powered termination at the end of the cable just to make the drive useable.

No scsi/sasi host adapter for the 8-bit I am aware of will tolerate a drive set to use a Parity Bit. This is usually a jumper on the drive labeled "P" or "PE" for parity enable disable. This jumper should be installed or removed as appropriate to provide a Parity OFF condition or the drive will simply not exist to the Atari's host adapter.

All SCSI host adapters for the 8-bit I am aware of use id 7. A drive set to id 7 will not exist on the chain and the host adapter may not work.

SA400 - Shugart Associates specification for controlling floppy drives which has been and is still universal.

SASI - Shugart Associates Systems Interface. The precursure of SCSI. Hard disks only. No tapes etc. Drives are dumb and don't map bad sectors without help from the computer operating system.

SCSI - Small Computer Systems Interface. A superset of SASI developed by a consortium of drive and controller manufacturers. Development of SCSI adds Tape drives and just about any other device to run on a SCSI host adapter. Atari 8's use small word scsi and don't provide all of SCSI's features but those related to storeage.

ST506/412 - A 'dumb' hard disk interface developed by Seagate Technologies. The hard drives had no controller onboard, just the bare minimum. Things such as format and encoding are decided by a controller such as an OMTI or Xebec or Adaptec which would be cabled to the drive by the installer. That the controller is a separate device and that the controller decides the encoding (RLL, MFM are most popular) proves that useing the description "MFM" for this type of hard disk drive is inaccurate. Mechs made to this interface spec are encoding neutral. "RLL Certified" drives are a little faster and have better media. Faster because of 26 physically shorter sectors per track and better media to satisfy the linear density required by 40% more sectors in the same amount of space. You might call many older IDE drives "RLL" drives as they use the RLL encoding method by a different interface scheme.

All of the disks, interfaces and encoding schemes above assume that there will be a fixed number of sectors in a track. A 17 sector per track format means that the innermost track (the shortest track on the platter) can store 17 sectors. The outer tracks have more area to record on but fixed-sectors per track makes for less complicated electronics.

This brings me to an example encoding method called Zone Bit Recording or ZBR.

Lots of ide and scsi disks now use this method. With cheaper and faster electronics, we now have the luxury of electronics smart enough to fully utilize the disk. This is accomplished by dividing the disk into logical "Zones" The outermost zone might store 80 sectors per track, the next inner zone only 64 and so on down to 17 for the innermost zone for example. The controller onboard the drive determins which zone it will write in and configures it'self accordingly. The encoding method is often a modification of RLL.

The above means that your hard disk 'lies' to your IBM PC compatible and lets the machine think that there are a fixed number of sectors per track when there are not. Useing an older hard disk formatter intended on a ZBR encoded drive that has bad sectors may result in the wrong

sectors being marked out as these formatters mark according to head and cylinder and relative sector number as in 1, 620, 17 for the last sector on an ST225 disk drive versus a linear sector number (21080). In this case of a 620,17,2heads drive, a zbr drive would be confused because to it, you have marked an arbitrary sector leaving the bad one at the end of the disk free for use.

I don't know what got into me with this message. I hope it is useful and doesn't bug anybody with the lecture....

OH, One BIG thing to remember:

Say you only have one drive, that drive must be terminated and on the last connector on the cable. There allways allways must be a device which is terminated and connected to each end for anything to happen. You can't leave an unconnected "tail" longer than 1/2 inch under any circumstances or the system may not work.

4423. Spartados and Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <373DAC3A.229112C9@cheta.net>
Source record: 52344

I might be preaching to the chior, but I might not.

A couple of years ago I became aware of the 8-bit emulator scene. As I run OS/2 I now use Xformer for DOS on my home and work boxes.

I didn't get an emulator and play with it right away because I was told that the emulators could not run any version of sparta but a single version of SD 1.1. This is not true.

Xformer won't boot any version of SpartaDos that has high-speed code in it. Version X32Z works perfectly. This is the version of Spartados which was modified by Bob Puff? for use with the MUX. I have tried another DOS called SRPdos provided by Tom Hunt of Closer to Home fame. This is a version of Sparta he wrote which had almost all commands as external files. The dos had a path and would load "DIR.COM" from the path to do a dir etc. It has a very small ram footprint. He removed the high-speed code for me as I was beta testing it on a MUX system and needed a version without that code in it. This MUX version of SRPdos works with Xformer also.

Not knowing all this spoiled me on emulation. Since I learned it I have created five 16mb APE files corresponding to my hard disk partitions. I have the emulator setup to boot x32z, set up a ramdisk as d8: and load 'The Wedge'. It is just like a real atari, but less ram than my 576k 130xe.

All you SpartaPhiles out there break out your emulators and have Phun!

4424. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <373DAC73.28F9EBDB@cheta.net>
Source record: 52345

I have tried new mechs lots of times with the Percom and ATR8000. As a computer tech I have access to all the parts I need for testing and still can't make them much more reliable. Back in 1985 or 1986 when I got my Percom in a trade, it was a double density model and was somewhat unreliable. It used a belt-driven full-height drive mech. I went out and bought two 360k ds/dd Newtronics gear-driven mechs and installed them. I have experimented with dialing them down to 288rm etc to no avail. There is something wrong with the controller that makes writes unreliable if verify is off. Reliability improves with verify but who wants that? I actually kinda 'got into' the percom for a while as it is a four-disk controller and was perfect for a bbs back then. I even painted mine Haze Grey once then later sanded the cover to bare metal and clearcoated it. I guess I Loved that drive..... Ok, but you all know what I mean about a treasured peice of gear you lovingly clean an tune up regularly. My percom was something of a trophy back then. Since then I have had three. One was brand new in a box in 1987 or 88. It had all the same problems. I think Bob Wooley or Bob Puff could fix whatever is wrong with the controller's design.

I hate that it sounds as though I am flaming the Percom drive, but I am only trying to share my experience with them and how exhaustively I tried and failed to make the damn thing perfect.

Hi All

A while ago I said I had some Portfolio bits for sale. I'm afraid 6
responses were received then I suffered a HD crash. So now I'm back.

After a theft I have the following left over.

Parallel Interface
Memory Expander
Utilities Card
3.5 PC disc with File Transfer Program.

To those who responded originally, I'm very sorry for the non-reply.

Anyone still interested?

Offers gratefully accepted. Buyer collects or pays for postage.

David Smith. das@copthorne.freeserve.co.uk
Copthorne, West Sussex. UK

4426. Action Cart Question?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: Isaac <idavis@my-dejanews.com>
Message-ID: <7hkhggepf1@nnrp1.deja.com>
Source record: 52347

Since I have now seen a couple of action carts on ebay recently way out of my price range, or heading that way, I started wondering. Who owns the rights to the action cartridge? Is it possible to copy it with an eprom burner? I want one, and have posted numerous times, but never seem to get a reply, then someone puts one up on ebay usually bundled with other items and I can't afford it. This is frustrating to say the least, and I am pretty sure I am in good company on this one. Is there a way we can get it dumped to disk. I have some of my cartridges on disk, like Atariwriter, and Basic. What about Action? I also understand that it comes with a disk as well. Does anyone have a backup of that?

Come on, who's with me????

4427. FS: USA: ICD MIO 1MEG/SpartaDos X cartridge

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7hkduh$31e1@news.ajou.ac.kr>
Source record: 52348

Greetings,

I have for sale a ICD Multi I/O 1meg version.
Comes with PowerSupply, RS232 cable, Printer cable,
Original Disk software and Manual, 50Pin ribbon Cable,
also comes with 2 Adaptec 4000A controller cards for
hooking up MFM/RLL type hard drives.

The MIO is in excellent condition. Works Great!
One of the Adaptec 4000A controller cards is
damaged. The other should work fine. It worked
the last time I used it and has been stored in
a box. I'll also include the cables that connect
to the Adaptec 4000A controller that connects to
the hard drive(s).
Also, if needed I'll include the MIO 130XE adapter
this allows 2 cartridge ports plus the MIO connection
to the 130XE.

In order to setup a hard drive system all you will
need is a hard drive and case with powersupply.

Also for sale is a SpartaDos X Cartridge v.4.19.
Comes with Manual.

I'll sell both items together or seperate.

I am going to ask folks that are interested to
make a Offer. Don't e-mail me and ask what I want
for these items. Make a offer if interested.

Items will be sold to the highest offer.
Buyer pays shipping charges.
Overseas interested persons are welcome to make
a offer.

I reserve the right to not sell any of these items
if I feel that the highest offer is not enough.

If you are interested in making a offer but need more
info on the items, then I'll try to answer any questions.

Thanks and good luck,
phantomm@kih.net

I have never seen a disk version, but I do have the cart and NO, it is
not for sale. Mine is a special. It has Action, Mac/65, BasicXL and
Basic XE all in one cart. I can select what I want with switches. I
can copy the rom but you will need a special bankswitching cart.

Hi Scott! Here he is.

how much detail do you need? you need to change your OS ROM and add a switch to your computer that will be used to select which OS will be active.

does your 800XL have sockets? is the OS ROM socketed?

I am auctioning my collection of Analog Atari 8-bit magazines on eBay.
Check this auction out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=104646073

This lot includes all the following issues of Analog:

#9-#10
#14
#18
#19-#29
#31-#37
#39-#42

Buyer pays actual shipping cost. This is an excellent resource for
the Atari 8-bit enthusiast. See my other auctions for more Atari-related
merchandise.

This lot includes an Atari 800XL in VG condition. The computer has
the original manual and power supply as well
as switchboxes to connect to the TV. This lot also includes an
A.P.E. cable so that the computer can be
connected to a PC and utilize the PCs resources. Extras in this lot
include:

See picture below on eBay

WICO joystick
2 standard joysticks
Original manuals for Music Composer, Star Raiders, Missile Command
and Asteroids.
3 cassettes: Intro. to Graphics, Witing Programs I and II
8 cartridges: Star Raiders, Pac-Man, Atari Logo, AtariWriter,
Missile Command, Asteroids, Music Composer,
Computer Chess.
This lot is an excellent value for the Atari 8-bit enthusiast.
Buyer pays shipping.

Buyer pays actual shipping cost.

Source record: 52353

I do not recommend that you steal a cartridge image since the code is NOT PD. I would expect that Mike Hohman owns the code since he purchased the 8-bit properties from ICD. In as much as they are actually available, we are talking about price? How much is fair to you? Admitting that you have images on disk is not going to increase my willingness to supply you with Action..... We all have things that we should not have, but is it proper to discuss it in the group?

Bob, the grouch....

Check out this eBay auction:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=104658319

This lot contains the following items:

Atari SX212 modem with power supply
Calamus SL original disks and manuals
Introduction to Sound and Music Program with sampler cartridge.
RISK ST game

The SX212 can connect to EITHER the 8-bit or ST/PC computers. It's
a 1200 baud modem.

4434. Atari 8-Bit stuff wanted

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: "David J. Robbins" <no@spam.co.uk>
Message-ID: <7hkqpp$t80$1@news5.svr.pol.co.uk>
Source record: 52355

I would like any of the following:-

Atari XE Video Games System with keyboard, lightgun, joystick, Bug Hunt and
Flight Simulator 2 with all cables in original box.
Atari XF-551 Disc Drive
Atari XC-12 Data Recorder
Invitation To Programming
Eastern Front 1941
The Lone Raider
European Countrys and Capitals
USA States and Capitals
The two complilation tapes that came with the Atari 65XE as sold by Curries
and Dixons in 1987
Any Atari game on cartridge
The three time text adventures(not sure of the name) to do with father time
released by the same people who released the Guild Of Thieves on disc
Atari Learning Basic(two cassetes in a big box with a thick manual, might
have the name wrong)
Page 6/New Atari User issues between 1986 and 1992
Owner's Manual for Atari 800XL

Any one interested in selling at a reasonable price please contact me at
DavidJRobbinsnospam@x-stream.co.uk
Remember to remove nospam when replying.

Thanks,

David

I have found that with any dos that has Highspeed code. Most emulators
don't do that good a job. Finding one that does for OS/2 is very
hard.

Must get a hold of that dos.

Another thing about pc floppies is that only TWO can be connected.
I have found it is possiable with SOME pc twister cable drives to
connect them to ATR, BBFloppy etc by changing around the jumpers. A
bit of trial and error here as well as a contuinty tester.

> SCSI, "MFM" (ST506/412) compatible drives and controllers (bridge

I have never seen such a cable and all MFM/RLL mechs I have here can
be set to one of four id's. Finding a controller card that can run
four mechs is a bit of a problem however. Don't forget that a sperate
20way cable for each drive comes from the controller to the mech. ie 2
drives, two 20 way cables plus the 36 way cable etc

>
> SCSI Drives follow the exact same rules for termination and id except

The MIO and BB Don't have an id, so it is possiable to have eight scsi
devices.
>

Whatout for the MIO. The TPWR pin is grounded. This usally pops a
fuse in the scsi device that is between +5v and TPWR. It usally cannot
br replaced because it is soldered in and very small.

>

I have heard of people getting around this by using a PAL ot whatever
to generate Parity.
I don't know if it checks Parity, but I would say it woulden't

>

SCSI is being updated all the time. Scsi 1 could only support
massstorage devices (from memory) Scsi II could support scanners and
cd roms as well as a speed increase.
Scsi III is faster again with more decive support.
The Harddrive in my pc is a 9.1G Ultra2 scsi LVD.

James.

4438. Need help with Copyright date: Hellcat Ace - Microprose

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: Hugh Falk <hughfalk@mindspring.com>
Message-ID: <uhm%2.8243$kE6.7455@wbnws01.ne.mediaone.net>
Source record: 52359

Can anybody please tell me the copyright date of Hellcat Ace by Microprose.
I believe it is 1982. The only way to really check is by looking at the
disk, manual or startup screen. If you want to know why I want to know,
please check out my site (under "GOTCHA Award" section):

http://www.emuclassics.com/gotcha/

If you know, please e-mail me at: hughfalk@mindspring.com

Thanks,
Hugh

Hi folks, this is off the cuff, but if you are on the internet between
8 pm and 10 pm central standard time (starting one hour after this
message was posted) then stop in at...

http://www.atariusers.com/chat

Stop in for a few minutes, chat for a bit. Would love to see how the
rest of you are doing out there!

Talk soon!

Hi everybody

i'm looking for someone who could e mail me the file of atari advertising
style fonts

thanks

4441. off topic FS: PB165 8/80 W/STYLEWRITER $285

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: gp429@aol.com
Message-ID: <19990514230146.23185.00000665@ng-cm1.aol.com>
Source record: 52434

For Sale: PB 165 8/80, w/ built-in modem from Global Village, CPU: 68030 33 MHz, and original StyleWriter (read not the StyleWriter II). Power-plug and battery for the laptop and a power-plug for the printer. **Note** No BAD LCD Pixels, screen is in very good condition. Overall the laptop is in very good shape i.e. no scratches and no marks just a little dusty that is all. Price: $285

Software Included:
MS Excel 5.0
MS Works 4.0
Global Village Zterm
and various extension and control panels

Hardware Cables:
Serial cable to connect the printer.
Phone jack cable to connect to the built-in modem.
Apple-Mic also a Cable that has a phone-jack at one end and RCA-type jacks L/R on the other end.

From more info or if you want to buy please e-mail me at either:
cdhoste@rocketmail.com or gp429@aol.com
shipping terms: I will shipping via the US Postal Service (in case anything goes wrong we have the Fed. Gov. to intervene) and it must be COD. I will, however, prepay everything and e-mail you the Total.

thanx

4442. Tech America Catalog for Upgraders

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990515001929.23173.00000764@ng-cm1.aol.com>
Source record: 52435

Recently acquired a Tech America catalog
at the Radio Shack. The amount of info it
contains is impressive. It's $4.95, but you can
get that back with your first order. But it looks
worth it even if you don't order. It has lots of
info about IC's, including pin-outs of many,
and a lot of generally good electronic info
that looks useful if doing/planning upgrades.
So if you are planning on that ultimate 1200XL
upgrade :-) or trying to figure out why someone
chose that 74XXXX chip, it could be useful. It's
about 650 pages.
Larry

4443. USR routine to load binary files (was Re: Question About Programmer From Antic)

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: seagtgruff@aol.com
Message-ID: <19990515023430.04642.00000641@ng24.aol.com>
Source record: 52436

Mark (csa_deathknight@excite.com) wrote:

[snip]
> This brings to mind a question I have, does any one have a
> usr call for loading a binary from basic?
[snip]

Here's an Atari BASIC routine that does the trick:

```
100 REM * MEMLOAD USR ROUTINE
110 REM * TO LOAD BINARY FILES
120 REM * BY MICHAEL S. RIDEOUT
130 REM
140 RESTORE 180:DIM MEMLOAD$(45)
150 MEMLOAD=ADR(MEMLOAD$)
160 FOR I=1 TO 45:READ A
170 MEMLOAD$(I)=CHR$(A):NEXT I
180 DATA 104,240,41,201,3,208,31
190 DATA 104,104,10,10,10,10,170
200 DATA 104,157,69,3,104,157,68
210 DATA 3,104,157,73,3,104,157
220 DATA 72,3,169,7,157,66,3
230 DATA 76,86,228,170,104,104,202
240 DATA 208,251,96
```

The line numbers aren't important, except for the one in the RESTORE command-- not the line number of the RESTORE command, but the one *in* the RESTORE command-- which should point to the first DATA statement. You really don't need to use RESTORE, but I think it's a good idea with routines like this, because if you add this routine into your own programs, you might want to use RESTORE to ensure that your READ statements are reading the data you expect them to.

Some programmers like to put all of their DATA statements at the end of the program, but I find that this can be confusing if you have a lot of READ statements scattered throughout a program, because if the READ statements don't get executed in the correct order, you can end up reading the wrong data. I prefer to put my DATA statements after the READ loop they go with, and to use the RESTORE command to point to the first DATA statement for that READ loop. After all, better safe than sorry, right?

Following is an example of how to call this routine:

```
300 OPEN #1,4,0,"D:DATAFILE.BIN"
310 A=USR(MEMLOAD,1,S,L)
320 CLOSE #1
```

In this example, "D:DATAFILE.BIN" would of course be replaced by the name of the file to be loaded into memory.

The MEMLOAD variable is just a mnemonic, and contains the address of the string holding the load routine-- or other machine code-- which is set in line 150 above. You could just as easily use the ADR function as follows:

```
310 A=USR(ADR(MEMLOAD$),1,S,L)
```

Personally, I prefer to define a variable as the address of the string holding the machine code, because it's easier to use.

The number 1 which comes after MEMLOAD is whatever file number you used in the OPEN statement. For example, if you used OPEN #2, you would use USR(MEMLOAD,2,etc.).

The letter S will normally be a number, and indicates the starting address for the binary file you're loading. The letter L will also normally be a number, and indicates the length of the binary file. For example, if you want to load 1024 bytes from file #4 and store them in memory beginning at address 36864, you would use the following:

```
A=USR(MEMLOAD,4,36864,1024)
```

Here's an Assembly listing of the USR routine, giving the decimal numbers (left), hexadecimal numbers (middle, in parentheses), and Assembly code (right):

```
104 (68 ) PLA
240,041 (F0,29 ) BEQ +41
201,003 (C9,03 ) CMP #3
208,031 (D0,1F ) BNE +31
104 (68 ) PLA
104 (68 ) PLA
010 (0A ) ASL
010 (0A ) ASL
010 (0A ) ASL
010 (0A ) ASL
170 (AA ) TAX
104 (68 ) PLA
157,069,003 (9D,45,03) STA 69+3*256,X
104 (68 ) PLA
157,068,003 (9D,44,03) STA 68+3*256,X
104 (68 ) PLA
157,073,003 (9D,49,03) STA 73+3*256,X
104 (68 ) PLA
```

```
157,072,003 (9D,48,03) STA 72+3*256,X
169,007 (A9,07 ) LDA #7
157,066,003 (9D,42,03) STA 66+3*256,X
076,086,228 (4C,56,E4) JMP 86+228*256
170 (AA ) TAX
104 (68 ) PLA
104 (68 ) PLA
202 (CA ) DEX
208,251 (D0,FB ) BNE -5 [i.e., 251-256]
096 (60 ) RTS
```

(Note: The above listing was designed to line up neatly in a fixed-space font.) Instead of using a typical Assembly style, with symbolic names for memory addresses, I've used a more direct style, to (hopefully) help you understand what's going on. For example, "BEQ +41" means "Branch on EQual to 0, forward 41 bytes."

When you call a USR routine, the Atari pushes the return address onto the stack-- so it will know where to return to after executing the USR routine-- then pushes all of the parameters you've passed to the USR routine onto the stack, and then pushes the total number of parameters onto the stack. That means the top of the stack holds the number of parameters which the USR routine has been passed. The very first thing the USR routine should do is pull this number from the top of the stack, so it will know how many more bytes to pull from the stack (two bytes for each parameter). That's what the first "PLA" does-- it PuLs a byte from the top of the stack and puts it into the Accumulator.

The next statement-- "BEQ +41"-- tells the Atari to test the value in the accumulator, and Branch if it's EQual to 0, forward 41 bytes. Note that it starts counting bytes with the statement after the branch command. In other words, the next statement-- "CMP #3"-- begins at 0 bytes after the branch command. If you count forward 41 bytes after the "CMP" statement, you end up at the "RTS" command (at the very end of the routine). Thus, we're supposed to be sending the USR routine some values so it knows which file to use, which memory address to start loading into, and how many bytes to read from the file. If the number on the top of the stack is 0, that means we called the USR routine without sending it any parameters! If that's the case, this particular USR routine needs to abort and return to Atari BASIC.

Note that some USR routines might not need any parameters, but they should still PuLl the Accumulator from the top of the stack, and then PuLl twice that many bytes off of the stack into the Accumulator before the USR routine ends, or there will be junk at the top of the stack that will cause the Atari to

crash! (When the USR routine ends, the top of the stack
needs to have the return address. The Atari takes care of
the return address automatically, but if you don't pull all of the
passed parameters from the stack, the Atari will return to the
wrong address, which is bad news.)

The next statement-- "CMP #3"-- tells the Atari to CoMPare
the value in the accumulator to 3, which is the number of
parameters which this particular USR routine is expecting.

The next statement-- "BNE +31"-- says to Branch if Not Equal
to 0, forward 31 bytes. What happens is that when the Atari
compares the value in the accumulator to 3 (in the preceding
statement), a result of 0 indicates that the accumulator did in
fact contain a 3. If the result is *not* 0, it indicates that the
accumulator did *not* contain a 3, so the wrong number of
parameters got passed to the USR routine. In that case, we
need to abort the USR routine, but before we do, we must
pull all of the parameters that *were* passed off of the stack,
so the Atari will return to the correct address. If you count
forward 31 bytes, you end up at the "TAX" command near
the end of the routine (which will be discussed in a little bit).

If the accumulator contained a 3, the branch isn't taken, and
the Atari proceeds to the next statement-- "PLA"-- which
PuLls the Accumulator from the stack. Note that the next
statement after that is yet another "PLA." In other words, we
pull *two* bytes off of the stack, one after the other. When
we're done, the first byte has been thrown away, and only
the *second* byte is in the accumulator. That's because the
first parameter expected by this USR routine should be the
file number, which can't exceed 255. Each of the two-byte
parameters is of the form "high byte / low byte," so we pull
the high byte, then immediately pull the low byte (because
the high byte isn't needed).

Next, we use four consecutive "ASL" statements. Each one
causes the byte in the Accumulator to Shift Left one bit, which
is the same thing as multiplying the value in the accumulator
by 2. So if we do "ASL" four times in a row, we shift the
contents of the accumulator four bits to the left, thereby
multiplying the value in the accumulator by 16 (i.e., 2*2*2*2).

Next, we Transfer the Accumulator to the X register
("TAX"). The X register will tell the Atari how much of an
offset to use in some of the subsequent statements. We want
to store the other two parameters into the correct i/o control
block, and the value in the X register will tell the Atari which
of the i/o control blocks to use. (Each i/o control block is 16
bytes long, which is why we had to multiply the file number
by 16 before transferring it to the X register.)

Next, we PuLl the high byte of the second parameter into the Accumulator ("PLA"). This is the high byte of the address where we want the contents of the file to be loaded, so we STore the Accumulator at address 69+3*256, offset by the X register ("STA 69+3*256,X"). I wrote the address that way to emphasize that the numbers 69 and 3 are the low byte and high byte of the address. 69+3*256 is 837, and location 837 is part of the first i/o control block (IOCB0), which begins at location 832. Location 837 is byte 5 of IOCB0, which is used to store the high byte of the target address, or where the data in the binary file will be moved to.

Next, we PuLl the low byte of the second parameter into the Accumulator ("PLA"), then STore the Accumulator at address 68+3*256, offset by the X register ("STA 68+3*256,X"). This is memory location 836, or byte 4 of IOCB0, which is used to store the low byte of the target address. (Of course, if the X register contains anything other than 0, the high byte and low byte will be stored at 837+X, and 836+X, respectively.)

Next, we PuLl the high byte of the third parameter into the Accumulator ("PLA"), then STore the Accumulator at address 73+3*256+X ("STA 73+3*256,X"). This is address 841+X, or byte 9 of the i/o control block, which is used to store the high byte of the number of bytes to transfer.

Next, we PuLl the low byte of the third parameter into the Accumulator ("PLA"), then STore the Accumulator at address 72+3*256+X ("STA 72+3*256,X"). This is address 840+X, or byte 8 of the i/o control block, which is used to store the low byte of the number of bytes to transfer.

Next, we LoaD the Accumulator with 7 ("LDA #7), then STore the Accumulator at address 66+3*256+X ("STA 66+3*256,X"). The number 7 tells the Atari to get a binary record, and location 66+3*256+X (or 834+X) is byte 2 of the i/o control block, which is used to store the specific i/o command we want the Atari to execute.

We've now told the Atari how many bytes to read from the binary file, where to load the contents of the binary file, and which action to take (i.e., read the file into memory). So the next thing we do is JuMP to address 86+228*256, or address 58454. This is the entry point for the Central Input/Output (or CIO) routines. The Atari takes over from there. Note that we do *not* Jump to a SubRoutine (or "JSR"), because the CIO routines will automatically return to the correct address within the BASIC program (which is now stored on the top of the stack).

The remainder of the USR routine is executed only if the USR routine needs to abort due to an incorrect number of parameters having been passed.

First we Transfer the contents of the Accumulator to the X register ("TAX"). If the Atari has branched to this part of the USR routine, the accumulator still contains the number of parameters which are on the stack (which is more than 0, but not equal to 3). The reason we transfer the number of parameters to the X register is because we're going to use the X register as a loop counter.

Next, we PuLl the Accumulator from the stack ("PLA"). We do this *twice* in a row, because we need to pull both the high byte and low byte for each parameter left on the stack.

Next, we DEcrement the X register ("DEX"), which is the same thing as the BASIC "X=X-1" statement.

Next, we Branch if Not Equal to 0, backward 5 bytes ("BNE -5"), which takes us back up to the "PLA" command immediately following the "TAX" command. Note that the numeric equivalent of "BNE -5" is "208,251"! If the number after the "BNE" command is 127 or less, it's interpreted as a *positive* number, and the Atari branches *forward* that many bytes. If the number after the "BNE" command is 128 or more, it's interpreted as a *negative* number, by subtracting 256 from it (in this case, 251-256, which gives -5), and the Atari branches *backward* that many bytes. So what we're doing is branching back up to the beginning of a loop, and repeating the loop X times.

After the loop has been executed the correct number of times-- indicated by the X register finally being decremented to a 0-- we're ready to ReTurn from the Subroutine ("RTS"). At that point, the Atari takes over again, pulling the return address from the stack, and continuing with the next BASIC statement after the USR call.

I realize that the preceding explanation is too complicated for some readers-- you need to know a little bit about the 6502 machine language, as well as how the Atari's i/o control blocks work-- but if you carefully study the Assembly listing, comparing the numbers in the DATA statements with the numbers on the left side of the Assembly listing, referring to a book on the 6502 machine language, and referring to a good memory map of the Atari, the preceding explanation should help you understand how this particular USR routine works, as well as give you some useful pointers about what you'll need to do when trying to write USR routines of your own.

Fortunately, you can use the given BASIC routine without having to understand how it works. You can use this MEMLOAD routine to load character sets from disk, or load other binary files into memory. Just be aware that if you're loading executable machine code from a binary file, it may need to be loaded at a very particular address in order to

work properly. Loading an executable binary file into the
wrong memory address can crash the Atari big time.

Michael Rideout

4444. Re: 97 colors in GRAPHICS 0

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-15 00:00:00 UTC
From: seagtgruff@aol.com
Message-ID: <19990515035816.07298.00000705@ng21.aol.com>

Thank you, those who responded regarding my program to
"jazz up" the Atari's GRAPHICS 0 mode.

I typed in the BASIC listing that creates the binary file with
the USR routines, DLI, and VBI. When I ran it, I thought I'd
come up against a compatibility problem, because the P/M
graphics weren't being drawn correctly. The next night I
sat down and scanned my typing carefully, and discovered
that I'd made a typo-- I typed "20" instead of "200"-- and when
I corrected it, everything ran like a champ!

One thing I've noticed is that the colors aren't exactly the
same as on a TV set. I thought hue 4 was supposed to be a
red color, but the emulator is displaying it as violet. [sigh]

Anyway, I've created a disk image with the programs on it,
but now I need to type up the article that goes with them,
which I'll save as a "README.TXT" file on the disk image.

I found out that I have to retract one of the things I said. The
standard P/M graphics are used, rather than the GRAF
registers in upper memory. Now that my memory's been
jolted, I recall that I *did* try using the GRAF registers as I'd
described, to save memory. However, this meant that the
DLI had too many things to do in too short a time, and the
machine cycles required exceeded the number of machine
cycles in the horizontal blank. Consequently, I went back to
using the standard P/M graphics, although I did use the
double-scanline mode to save *some* memory.

What I said about using self-modifying DLIs was correct. In
fact, I used only one DLI, which is called before each row in
the DL. After the DLI changes the colors on each row, it
increments some of the addresses in the DLI, so that the next
time the DLI executes, it pulls the color information from the
next set of addresses in the color arrays. I did this in order to
keep the number of machine cycles required by the DLI to a
bare minimum.

I just LISTed the programs to the "H:" device, so I can post them in this
message. This first program creates the machine language routines and stores
them in a disk file.

This next program loads the created file into memory so the USR routines can be used in your BASIC programs. Note
that it uses the MEMLOAD routine (which I just discussed in another post) to load the file. Your program would go
between lines 2 and 32699.

```

I'll get to work rewriting the article that explains each of the USR routines and how to use them, but the following notes-- along with the two demo programs-- should get you started.

A=USR(INSTALL)

No parameter is required. This routine modifies the DL for the DLIs, sets up the P/M graphics, and initializes the arrays. If you issue a GRAPHICS command, you need to call this routine again, because the GRAPHICS commands wipe out the modified DL. This routine aborts if you aren't already in GRAPHICS 0. Note that this routine automatically falls into the next one.

A=USR(ENABLE)

No parameter is required. This routine enables the P/M graphics and DLIs if they've been disabled with the next command.

A=USR(DISABLE)

No parameter is required. This routine disables the P/M graphics and DLIs, to return you to a normal GRAPHICS 0 display (although the DL isn't changed). This might be useful if you want to temporarily revert to a normal screen without destroying the DLIs.

A=USR(SCREEN,color,row1,row2)

Three parameters are required: the color you want to use (given as a value between 0 and 255, or-- if you prefer-- as the expression 16*hue+luminance); the first row on which to apply the new screen color; and the last row on which to apply the new screen color.

A=USR(TEXT,luminance,row1,row2)

Three parameters are required: the luminance you want to use (given as a value between 0 and 255-- as with SCREEN--
although only the luminance value has an effect); the first row on which to apply the new text luminance; and the last row on which to apply the new text luminance.

A=USR(PLAYER,color,row1,row2)

Three parameters are required. This is the same as the SCREEN color routine, but it changes the PLAYER color (which is used as a second screen color).

A=USR(AREA,type,column1,row1,column2,row2)

Five parameters are required: the type of area (or "box") to draw (0, 1, 2, or 3); the first column and row (for the top left corner of the box); and the second column and row (for the bottom right corner of the box). A type 0 box uses the SCREEN color, with no inverse graphics. A type 1 box uses the SCREEN color, with inverse graphics. A type 2 box uses the PLAYER color, with no inverse graphics. And a type 3 box uses the PLAYER color, with inverse graphics. Note that if you draw a box containing inverse graphics, you shouldn't PRINT over the box, as it will interfere with the inverse bits. It's preferable to PRINT your text first, and then draw a box around it (if the box uses inverse graphics).

A=USR(MEMLOAD,filenumber,startingaddress,length)

This routine isn't part of the USR file, but it's used to load the USR file into memory. You can of course use it for your own purposes, such as loading character sets or other binary files. You can find a rather thorough discussion of this routine in another posting (including an explanation of how it works).

Michael Rideout

4445. Re: Action Cart Question?

First thing, I do not want to start a huge copyright war again. That is why the first thing I asked was "Who owns it." Since you have given me a name, that's exactly what I was asking. I know for a fact that Best Electronics has acquired the rights to some things and started making cartridges. I was wondering if that was even feasible, otherwise why even bother tracking down the owner. If you can't make the cartridges to begin with, why spin your wheels looking for the owner.

Second, since Mike Hohman owns the rights, then I guess I will pretty much forget getting one, unless I stumble on one somewhere, but in the last 2 years, that has happened 0 times for me. I think I am in a group of people who would like to get one, but don't have $50 to spend on one cartridge. I can't justify it to my wife and kids. I really want one, and I know I am not alone. I have people from Austin to Los Angeles keeping an eye out for me, and have posted in this group before looking for one. I think 25-30 is a fair price, but since the owner of the rights is gone, and there are a limited supply then I am not going to get one for what I think is fair. I will go further and say that $25 is fair to me because as much as I want one, I will live without it. I am not taking rarity into account, I am just putting my value on it. Now if you ask me what my original 800 is worth, I will happily tell you, it is priceless. If my house is on fire, I grab 1)kids 2)my atari and pictures. So my value probably doesn't matter in this case.

Please don't start bashing me over this. I had some questions, which have been answered. <sappy mode on>I am a programmer, and got my start on my atari. It is very close to my heart. I have only seen one person actually write something with their action cartridge (Bill Kendrick). I know there are a lot out there, and they must be collecting dust, but since they are hard to come by, I guess people are waiting to get the most for their money. This is part of the reason I can't stand Ebay. There are people like Rick Detlefsen who will sell you the atari shirt off their back if you really wanted it. They are not in it to make the most money, they are fellow collectors and users of their atari's. I know that if Rick had one, he would sell it to me in a minute for a price reasonable to both me and him, not the highest price he can muster. I understand the whole issue I am bringing up, and just let me say that everyone is free to do what they want with their things, I don't deny that. I you don't want to help people out because of something they post, then that is your perogative.<sappy mode off>

I don't plan on setting up a factory cranking out illegal copies of action. I was merely asking if it was a possibilty in this case. It must be possible for some title, otherwise skulls need to be cracked over at Best. Bob - No need to be so grouchy.

OK listeners, I have gone over my time limit, time to cut to
commercials.

This is inaccurate. (at least I'm pretty sure <grin>) The twist
merely changes around the ID lines. When you use twist style floppy
cables in PC (in general practice) you only use two drives max on a
cable. You set the device ID jumpers on BOTH drives to drive two
(drive one when counting from zero) and the twist in the cable changes
it back to drive one (or zero depending on the counting scale). The
twist DOES NOTHING in relation to termination.

What modern PC floppies use (and IDE devices as well I think) is a
form of termination where there are no resister packs to install or
remove and no jumpers to change to set termination. Termination is
automatic. The method used is called DISTRIBUTED TERMINATION. It
gets a little bit technical and to be honest I would have to look it
up in order to explain exactly how it works. There is a really great
book out wich covers PC hardware called "Upgrading And Repairing PCs"
by Scott Mueller and is published by Que. It explains it. If anyone
is interested I can re-read that portion of the book to try and
explain it better.

>Another thing about pc floppies is that only TWO can be connected.
>I have found it is possiable with SOME pc twister cable drives to
>connect them to ATR, BBFloppy etc by changing around the jumpers. A
>bit of trial and error here as well as a contuinty tester.

There is no mystical properties here. Did you know that PCs can have
4 drives as well? In the old days of PCs (especially the days when a
lot of systems were floppy only) it was not unheard of to have a PC
with 4 floppy drives on it. You can use non twisted cables perfectly
well on a PC if but you then must take care to set the device ID
jumpers correctly. All the drives you find in PC style systems have
jumpers to set the ID to 0 through 3 (or 1 through 4) somewhere on
them. The real big problem that I find with such drives is that you
NEVER seem to get documentation on the floppy drives UNLESS you buy a
retail packaged floppy drive on it's own. Even then you may not get
the all the jumpers documented. It goes without saying that OEM drive

bundles or drives that come pre installed in whole system are never documented. In the "old" days it was unheard of not to get such information. How times have changed. Fortunately a lot of times you can find the jumpers for device ID by looking at the silkscreaned info on the PCB of the drive or other clues. Then it is a simple matter to set the drive ID. You can't always find such clues though, and sometimes there are other jumpers whose function is somewhat of a mystery.

>> SCSI, "MFM" (ST506/412) compatible drives and controllers (bridge
>> controllers like OMTI, ADAPTEC, XEBEC etc) use EXACTLY method of
>> configuration as the above. This 34 pin cable was flipped for the PC

>> floppies above. Same rules and procedures for termination etc. Only
>> difference is that these 'mfm' mechs only have two available id's
>> instead of four as in SA400 floppys.

I also want to point out, that when termination is required to be manualy set, keep in mind it is usually if not always independent of device ID. Termination is determined only by whether a drive is at the end of the cable or not. In other words, the last device in the chain gets the termination. You can go change around all the device IDs to a different order all you like but the termination must be on the end or distributive across all, depending on the implementation.

Don't take this wrong. I don't care what you ask for your stuff and I wish you the best, but I think you will have a hard time selling that stuff for that high of a price. You might do better individually. $150 is a lot especially if you only need one or two of the carts to fill your collection.

I have a few facts for you.

1. I have a "yellow" label Action! cart.

2. I do not wish to sell it (I don't think anyway)

3. I have seen a bootleg Action! cart ages ago. Actually it was an
OSS supercart bootleg device. An old Atari friend had one. He bought
it from some bootlegger that went by the handle of "Sandman" or
something like that. What it was was a cart board with two sockets in
it. My friend would put in the appropriate EPROMs (which he had
purchased with the board) in to determine which OSS cart he wanted to
make it. The old OSS carts (the orange cart case ones) had two chips
in them. (My Mac/65 is like that). Later black carts with yellow
lables I believe had one chip in them. My Action! cart is the black
and yellow variety and is welded shut with a strong epoxy. I am
certain the case would crack and break to hell before that epoxy let
go at the seem.

4. I have a SOFTWARE disk file type version of Action! that actually
works!

5. The software version works, but not very well as memory is sooooo
limited in this way. I tried it out for the heck of it a long time
ago and remember that it sort of worked but had a lot of kinks or
limitaions. I no longer remember the specifics.

6. Action! is a very cool language and makes pretty fast and tight
code (concidering it is a high level compiler).

7. Action! has NO floating point support standard, and has it supported in a very limited way through add on library. So, for anything not needing floating point Action! is great.

Bob I can appreciate your position and I DO appreciate it, but without
drawing everyone into one of those "pirate debate wars" I would like
to make a couple of quick quick points.

1. It is currently 1999. Computers are doing.....
2. You state that "we ALL have things we should not have". I assume
"we all" includes yourself?
3. I also appreciate honesty. At least he was honest in admiting he
has something. And in a way, you kind of did too.
4. Why then, would you speculate about whether he is as worthy or
noble as yourself in regards to you helping him out?
5. I firmly believe in the protection of intillectual property rights
and the vlaue of doing so and the pitfalls of not doing same.
6. Yet... I admit that I too am included in the "we all". Call me
weak. Call me a thief. Just don't call me dishonest.
7. I have known some to argue that owning and using software for
which royalties have not been paid is somehow moral. I generally
disagree.
8. I have known others who argue that it is immoral. I generally
agree.
9. I have known NO ONE, who has not used, at least to some degree,
software that they did not legitimately purchase. Where does that
leave those who vigorously wave the finger of accusation & high moral
ground?

10. In short... I try my best to take the high road but sometimes I
give in a little. I try not to throw stones when I live in a glass
house (or at least has some glass windows <grin>).

11. I (think) I know where you're coming from Bob. Maybe the high
horse should stay stabled?

4452. Request for Football Manager game

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-16 00:00:00 UTC
From: Alan Clark <alanclark@cadvision.com>
Message-ID: <373e8141.0@news.cadvision.com>
Source record: 52368

Hi,

does anybody remember the old Atari 800 game called "Football Manager"? It was made by "Addictive Software" and featured a photo of the author, Kevin Thomas I think his name was, on the cover with a cheesy grin on his face. I suspect it may have only been released in the UK. It was very popular at the time on the speccy and commodore 64 also.

If so does anybody know if an .atr file of it exists?

Thanks much,

Alan

Being a full-time tech makes for a bunch of leftovers. I have 33.6k modems, sound cards, some larger hard drives both scsi and ide. Controllers etc.

Anyone interested in pc hardware?

4458. SpaceBall Controller for trade

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-16 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <373EE7ED.9BEF72C9@cheta.net>
Source record: 52374

I have an original SpaceBall controller for the PC. This is a SIX AXIS controller spawned of a controller for computer aided design. Hardcore gamers should already know. Esp Quake, Descent, and Forsaken players.... They are hard to find. I could probably sell it for $100.00 cash but I still want some toys.

I would trade even steven for :

A couple 800's

A couple 800xl's

A 1200xl and something else sweet

A Trak Floppy drive and something sweet

An Indus drive and something sweet

A MUX cart system (two slaves and a master). Got software and docs. Need the roms as well.

4459. Bad luck with Atari XL's!

Hi,

Having managed to pick up a boxed pristine 600XL for ï¿½5ukp complete
with cables and manuals I was a bit narked to get it home only to
discover it does exactly the same as an old battered 800XL I got a few
weeks ago! Both machines power up, but instead of getting the 'ready'
prompt all I get is a brownish-red screen and nothing else.
Was this a common fault with XLs or have I just managed to pick 2 bad
ones?

TIA

Back in the 80's when those 9volt packs that power everything from the 400/800 to the 1050 , interfaces and Printers were common I could not afford to buy replacements. So I hacked and repaired mine. Here is what I do when they die.

1) Open the pack. They are sealed to a cruel degree but I have done it two ways:

Heat a steak knife over a gas stove till it is REALLY hot and then use it to cut the top off the pack. You will have to reheat the knife periodicly...

The above is smelly but works.

The other way and much cleaner is to use a hacksaw and cut on each of the four edges of the top of the supply and pop out the top to expose the transformer. Be careful not to cut too deep. There isn't too much inside to damage when you cut on the top. At the bottom are the cords and internal connections.

2) If the fuse concealed within is blown, then there is your ticket. Go to Radio Shack or the local equivalent and buy a fuse holder, some heat-shrink tubing, and a pack of fuses. The fuse value is 250volt ac, 5amp, slo-blow. You will need to do some very simple soldering to install the fuse holder. If you got a small enought fuse and holder you could put the whole shebang back inside the power pack and tape the 'cover' back on the top. Next time the pack 'dies' it won't be such a pain I guarantee.

4462. Re: Docs to repair 9volt power packs

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-16 00:00:00 UTC
From: jerry_glenwright@my-dejanews.com
Message-ID: <7hn5p0$3s2$1@nnrp1.deja.com>
Source record: 52378

An easier (and smell-free) way to open the 9v power pack is to use an electric drill with a bit that's just larger than the rivets (four off, one in each corner). Simply drill them out -- it's very easy and doesn't put the innards at risk. When the rivets are drilled out the two halves of the pack separate (and go back together again) very easily.

I used this method when repairing a 'buzzer' -- when the pack oscillates wildly, increasing all the time until it seems it's likely to explode! OPen it up and reposition thr 'works' slightly and the buzzing is cured forever.

Best wishes
Jerry

I think I am being taken way out of context here, and should probably do a little more to explain my original post. I was not advocating just running out and burning copies. I tried to follow a logical path of questions. 1) Who owns it? 2) Is it possible? If both of those had answers that made it possible, then I was suggesting that we get in touch with the copyright owner, and find out what it would take to get the Action cartridge back into production. I know I have seen a lot of people that want one and cannot get it. And 99.9% of the people who have one will not part with it for obvious reasons. This was not a pirating call to arms, more of a call to arms to find the owner and maybe get it back into production. I have no problem paying for a legitimate copy, and that's what I want, but I can't afford the prices I have seen lately. Like Jon said, it's 1999, and this has become a hobby, not a career. Let's not confuse hobbies with actual money making jobs. Even if I obtained a cartridge, nothing I can/could/would write would make me any money, and I wouldn't charge for it if I could. I write programs for fun. I give away programs I have written in more modern, money making languages like Visual Basic 5.0. Check my website. Now those I could probably make some money off of, but I prefer to help others out the best way I can. I know that people like Bill Kendrick understand where I come from. He does the same thing with his website, and Gemdrop is a perfect example. So when I said "who is with me?" I was referring to getting this through legal methods for a reasonable price.
Everybody take a deep breath.

Personally I prefer the "Neanderthal" nick-name for these first edition
2600's. That denotes both the age and the thick skull.
As to the post- these Neanderthal's are among the more scarce units,
but there are several US versions that are tougher.
As to price- I suspect most people would consider it too high- but
if you've got a lot of money or live in a remote or rural area- where you
not likely to run across one maybe it might be worth it to you.
As to the thrift shop find- $10.00 for 37 carts with instructions, and
with any kind of Boxed game machine was an excellent buy.

I thought it was a good buy... of course there was nothing rare in the games - just the usual Combat, Pacman and missile command type games. If someone wants to buy the system off me and the combat cartridge for $40 I'd be happy to sell ;) Although I still think that guy's prices are a bit ludicrous. I guess if you label something as "rare" /someone/ will come along and pay those prices...

4469. FS: Atari 8-bit, it's in great shape 'til I shred it!!!

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-16 00:00:00 UTC
From: TSICRDSX@mu3.millersv.edu
Message-ID: <18340138F8S86.TSICRDSX@mu3.millersv.edu>
Source record: 52385

This stuff, if not sold now, is probably on its way to the local home for shredded cardboard and plastic, so..... if you see anything you want, need (try to picture one who NEEDS Atari 8-bit software!!), well, make an offer. (Hmm, have any spare pictures of CHARISMA CARPENTER or ODALYS GARCIA?)

If anyone wants to make an offer on the lot, go ahead.... people won't laugh at you (though even your pet anaconda may shun you!)

Buyers will be responsible for all shipping/handling charges. Sales to contiguous US only. (No, you don't have to spread a disease...) On second thought, if you're willing to pay for this stuff and you live in Botswanna or Brigadoon or Mogadishu or wherever, yeah you can buy it. I draw the line at selling to the White House... at least until I see the color of its $3-dollar Bills.

Atari Games for Sale

(All complete with boxes and documentation, unless otherwise noted)

CARTRIDGES
~~~~~~~~~~

**Atari

c Centipede Zap the worm and all his parts. Arcade game.

**Imagic

c Demon Attack Space Invaders with flapping wings.

**Spinnaker (once again, nice but heavy premium plastic packaging)

c Fraction Fever Shouldn't 98.6 be 98 3/5 ?

c Story Machine Kind of a "mad lib" for your kids.

DON'T TELL *ME* YOU HAVEN'T HEARD 5-1/4" FLOPPIES MAKE GREAT VALENTINE GIFTS!!!!

5-1/4" diskettes
~~~~~~ ~~~~~~~~~

**Atari

d Caverns of Mars Primitive Zaxxon in a Martian cave

**Atari Program Exchange

d Seven Card Stud Monty Webb's poker game. Ziplock
packaging.

**Avalon Hill

d Divex Another darned "teach your kid" number
stuff... don't YOU ever sit down with
him??

d Midway Campaign Win the naval battle in the Pacific

**CBS Software

d Success With Math: Math for grade levels 5-8
Fractions

d Success with Math: Grade levels 7-11
Linear Equations

d Success with Math: Grade levels 9-12
Quadratic Equations

**Cosmi

d The E Factor Save your planet against mimes, aliens
and asteroids!! Sorry, Marcel, oops,
that's "Mines"

**EPYX

d Temple of Apshai Base for other DUNJONQUEST games.
Includes both cassette version and
5 1/4" disk.

d Upper Reaches of Apshai Another expansion module for Temple of
Apshai. Book of Lore missing.

**Spinnaker (Heavy plastic box packaging...nice, but probably
expensive to mail !)

d Kinder Comp Collection of six educational games.
Boy, are your kids going to be smart !!

**Thorn EMI

d Home Financial Management If you buy all the above, this will
help tell you how much over budget you
are!!

**Walt Disney PC Software

d Mickey & the Great Outdoors If your kid can only learn from a
mouse, this is the one to do it.
More math and literacy skills.

DID YOU REALIZE THERE IS A RUMOUR CASSETTE TAPES MAKE EXCELLENT KINDLING!

Cassette Tapes
~~~~~~~~ ~~~~~

**Avalon Hill --- I really liked some of these!!!!

t Empire of the Overmind I do remember loving this game...
but times were simpler and so was I
Includes great 'parchment' poem
(Apple & TRS also)

t Midway Campaign cassette version of same as listed
above with diskettes(Apple,PET, & TRS
included on tape)

**Cosmi

t Aztec Challenge Seems to be "Mountain King" type game.

t Caverns of Khafka typical cavern-tomb danger graphics
game

t The Crypts of Plumbous A lot like "Defender", as I recall.

t Forbidden Forest Find your way out of a deadly graphic
forest

t Galactic Avenger "Space Invaders" type game

t Spider Invasion Destroy deadly spider mutations, their
eggs and nest. Are you getting as
itchy as I am?

**Edu-ware Services

t Compu-read 3.0 Tool for improving reading speed and
comprehension. NOT boxed, but in it's
own folder including docs.

**EPYX

t Curse of Ra Expansion module for "Temple of Apshai"
adventure game. Book of Lore missing.

**Program Design, Inc.

t Addition with Carrying Math games for the young. In clear
plastic sleeve.

**Thorn EMI -- love their packaging....beta-like plastic containers
(and we all know where beta is)

t Cribbage & Dominoes Cribbage & Dominoes...get the idea?

t Figure Fun Two games to teach multiplication,
division, etc. Five levels, cover most
~~~~~~~~

ages

t Pool Everybody in the Pool !! No, not that
kind -- tournament and eight-ball,
practice included.

t Super Cubes and Slip Rubik's Cube and marble maze in
computer form.

Books and miscellany
~~~~~ ~~~ ~~~~~~~~~~
b Atari Games and Recreations by Kohl, Kah, Lindsay and Cleland

b Atari Programming with 55 Games Schreiber

s Atari Student PILOT Reference Guide Includes Cartridge for Atari
Pilot

s Atari Speed Reading **MASSIVE**, looseleaf bound, six
cassette "Learn to Read Faster"
course. Weighs a ton.

b Kids & the Atari Would a kid know what an Atari was?
Still in its time it was a good
introductory primer.

Now the following are not necessarily Atari, but are books on Basic...
Much of which could be modified to Atari, and certainly all of it is
composed of atoms.

25 Exciting Computer Games in Basic for All Ages David Chance
33 Adult Computer Games in Basic David Chance
34 MORE Tested, Ready-to-Run Game Programs in Basic Delten T. Horn
67 Ready-to-Run Programs in BASIC Wm Scott Watson
1001 Things to Do With Your Personal Computer Mark Sawusch
Basic Fun - Games, Puzzles, Problems for Children Lipscomb & Zuanich
Compumath Magic (a kid's book) M.J. Winter
Dragon Magic Your First Programming Book Richard Wadman
Games, Graphics and Sounds Curran & Curnow
How to Write an Apple Program Ed Faulk
How to Write a Program II - Advanced Programming Techniques Ed Faulk
Stimulating Simulations (Second Edition) C.W. Engel
Your First Steps in Basic Curran & Curnow

If you need any further info, heck I don't have much to say.
Haven't played most of these more than once or twice, and
certainly not in the last 3000 years!

well, you know, you ever send a message and just KNOW it's going to turn to doo-doo? maybe the Devil made me do it..... let me rephrase.

i want to make it possible for you to buy a cart since it is not PD.

you seem to want to purchase one but at less than "market" (i.e. ebay) price. what did you have in mind?

letskeeptheconversationawayfromhowto"create"acartbecausewedon'twanttoopenthatcanofworms

:>)

my horse is certainly no higher than anyone else is..... and I fall off a lot!

as a sidebar, Mike Hohman was developing the MARS board which had all four ICD carts built in. a very ambitious project. worked.

If Mike ever shows up again, we can ask him how to augment the cartridge supply. He's a true Atari Guy - he isn't out to get rich either. He might be OK with it. In the meantime, anybody want to search my stock for extras? There may be 10 or 15 of them in there.

Bob

Source record: 52288

Over the weekend, I made the trek from
Indpls to Dayton. OH for the Hamvention. I'm
not into Ham Radio, but I love the huge flea
market. I picked up some (supposedly) good
Teac 55 GFR 5-1/4" drives. They are gear driven,
and appear to be of a fairly recent design.
Unfortunately, I don't have any info about them.
They certainly appear to be 360K, and for sure
are D/S. I'm presuming they are not HD, since
the Teac HD's were clearly labeled 1.2 on their
factory labels. My hope is that they are low
enough in their power requirements to be an
acceptable replacement for the Chinon used in
the XF551's. They even have the edge card
connector on the correct side for the very short
XF cable. And they are gray, although not quite
the same shade as the XF, but close.
Anybody know something about these or could
suggest where I might look?
Thanks,
Larry White

> pick 2 bad ones?

No, that wasn't a common fault with XLs, at least not that I've ever heard of. You did say "ï¿½5ukp" and your message id says "news.demon.co.uk". The only thing that comes to mind (besides the obvious "you got a couple of busted machines") is that it might have something to do with NTSC versus PAL? If that isn't it, then maybe a chip is loose or something?

I used to own a 600XL (very briefly) and 800XL many years ago. I got rid of the 800XL when I got a 65XE, and later I bought a 130XE. The XLs used to drive me crazy with a bug that only showed up occasionally, right in the middle of editing a BASIC program. As I recall-- and my memory is a bit hazy on the details-- the computer would crash at times when you deleted a line (SHIFT-DEL) while editing a BASIC program, and if you hadn't SAVEd your work up to that point, you were screwed. It didn't happen all the time, just under certain conditions (deleting a line from the bottom of the screen? or deleting a line when the program was a certain size?). Atari later fixed that bug, so later XLs-- and the XEs-- didn't have it.

4474. FS/T: Atari 8-bit computer items [05/17/1999]

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-17 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <3750c2fb.21534315@news.nls.net>
Source record: 52290

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 05/10/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 2.50 3-D Tic-Tac-Toe
$ 2.50 Alphabet Zoo [Spinnaker] -- no label
$ 2.50 Atariwriter
$ 2.50 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede

$ 2.50 Dig Dug
$ 2.50 E.T. Phone Home!
$ 3.00 Frogger [Parker Brothers]
$ 4.00 Gateway to Apshai [Epyx]
$ 1.00 Missile Command
$ 2.00 Pac-Man
$ 2.50 Qix

(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will not boot up. Sold as non-working item, possibly repairable, for parts only!

$ 3.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in

business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

no. just bad luck. Good news tho. you can pull them apart and syart
swaping chips around.
Most of the chips in both computers are the same.
start with the 40 pin ones first.

James.

Did you check the lenght of the mech's?
I have found the xf mech is shorter then most.
Have also found some density changing promlems with other mech's as
well.
You may be lucky with what you have.

James.

I know it's not a PAL vs NTSC thing because both of them have PAL modulators in; since both of them have been carted round boot sales and the like I'll try reseating the chips.......

cheers!

Hey,
back to the good old times. There exist some basic files called "Apple War" and "Commodore War" (or something like that). The apple war file just presented the apple logo, which was destroyed by the Atari Fuji. Then there were 2 short lines showing "Atari Computers" and "Apple Computers", where the Atari line was soon bashing at the Apple line. After a while you could read "Atari Computers" and "Apple Sausage"...

The second computer war file "How to kill a Commodore" was much better, it featured some really funny animation, like blizards, rockets, stars, mathematics, etc. Really funny... especially the final counter that said "One Commie down, 99999 to go...", it was a real counter, so if you watched the demo some more times, it was counted down... I love it !!

There was also an Amiga war file, which was nothing more than a recycled apple war file. It just did the same, showing the Commodore logo and "Amiga Computers" instead of the apple logo and "Apple Computers". When it ended, it loaded the next demo, which was a ML Demo called Amiga Ball, showing all Amiga fans, that a simple 8-Bit Atari could do the same thing: rotate and bounce a 3D ball...
- Andreas

P.S.: Anyone who knows of more computer war(s) files, coded on the little Atari ?!?

Someone mentioned that there were 3 releases awhile back. I know of 2 official conversions.

The original was dog slow, choppy and lacked fun gameplay. It looked good though.

Atari created the 5200 version and seemed to re-release the same version on the 800 which was now faster, smoother and played more like the arcade. It wasn't quite as colorful.

I've never seen a 3rd version that someone mentioned seeing.

Before you start swapping chips I would suggest pushing all the socketed chips down. With time and buffeting they can work loose or the legs get oxidised.

Pushing them down will cure either...

If not then play chip swapping...

Right, but what I wanted to know is how to ID the later version since I had
heard it was the silver-label cart but obviously that's not the case because my
brown and silver-labels contain the same program.

I don't want to sound like to voice of doom here, but I've owned a number of
800XLs over the years and none of them had any socketed chips in them - they
were fully soldered (annoying as I'm a terminal hardware hacker).

It would be interesting to know if yours are socketed!

>....They certainly appear to be 360K, and for sure
>are D/S....

GFR-55s were available in several "flavours", they definitely made 720K units and also DUAL SPEED 1.2Mb units (I have at least one of the former type and several of the latter which were discarded as faulty by people who didn't have the appropriate controller card). I don't know if they made a 360K version.

I haven't fiddled with these drives for some years but ISTR that there should be a suffix on the part number IE GFR-55"x" which identifies the type of drive. Sorry but I can't recall any more details....

I have owned a 600XL and two 800XLs. I still own my 2nd 800XL (the
1st one dies in a lightning strike). Anyway, I don't remember the
inside of the 600XL much but both of my 800XLs were socketed. I have
heard some were not. Mine have the better keyboard and are ones that
were made in 83.

Hi James,

Your more patient then most, many people who gave Mike hardware and/or $$$ for some Fine Tooned Engineering products are quite angry at Mike. Mike seemed to be a very talented person, I wish he hadn't just disappeared, if he had just made ammends over the years with various people and continued his work I'm sure he would be in very good gracies with the 8-bit community. Well if Mike is still out there, perhaps he should pop his head up, perhaps through a hotmail account or Yahoo account and at least talk to the 8-bit Atari community and maybe getting something going again, there are still hundreds and even thousands who still would love some hot new hardware items for the 8-bits.

Mike.... You listening????

Curt

I hope someone can help me here. I remember this game from
when I was very young because it was so damn hard. I could never
figure out how to do much of anything. I always thought it was
because I was just young and didn't have much experience with text
games. Well, I recently got an emulator and found the game online. I
can not get any farther than I could when I played it over 15 years
ago!! Can anyone help me with some hints, a walkthrough, or anything?
I have scoured the web for info and have found nothing. Any help
would be greatly appreciated.

Hi Jon,

>I have owned a 600XL and two 800XLs....

There's a thought, I've never cracked open my 600XL (or powered it up for that matter)....

>....both of my 800XLs were socketed. I have heard some were
>not. Mine have the better keyboard and are ones that were made
>in 83.

I've no idea when my 800XLs were made (I have 5 or 6 knocking around the place), I bought them all second hand or at car boot sales - first one in '85.

They're all PAL machines, obviously since I live in the UK, and since they sport two different types of keyboard between them I assume that they were manufactured during different eras (pre/post Tramiel?). The one thing they all have in common is that all the chips are soldered in. I suppose I've just been unlucky? :-(

TTFN - Pete.

4496. Diffs between 800 and 800xl, compatibility

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-17 00:00:00 UTC
From: John Kwiatkowski <johnk@clark.net>
Message-ID: <3740D82A.8C87CCC5@clark.net>
Source record: 52312

I had an 800 decked out with 48k, 1050 drive, touch tablet
and mega software back in early 80's. Unfortunately it is no
longer with me :(However, in an effort to get back into the Atari
scene I am picking up an 800XL for $30 (not a bad deal I hope).

Since this is an XL with 64K(?)I would think it would be
better than the older 800. However, I just saw a post in this group
stating that they would like to use the older OS ROM with an XL
since it is more compatible. What gives?

Are there programs the older 800 would run but the XL won't?

Since I don't have a drive I plan on getting an SIO2PC cable so
I can boot the atari off my PC. Any tips on this would be helpful.
I have read that there is a similar product called APE, any pros/cons?

Any pointers to an XL user manual would be helpful, like disabling the
built in BASIC on boot, etc.

Thanks for any input. Can't wait to fire up that XL and see the blue
screen.

John K.

That's the opposite of my experience with the U.S. 800XL's. I
used to do repairs and upgrades and probably worked on over 100
different XL's. They were all socketed except one which was a
post-Tramiel 800XL.

Yes... some of the older 3rd party stuff will need some type of translator
(or an 800OS) to run.
>
> Since I don't have a drive I plan on getting an SIO2PC cable so

I have a full-blown APE registered system running on a 486dx. It's great.
Great way to keep my 8-bit hard drives backed up too. I like APE a lot. I
also have an 800xl with the WarpOS which gives you 4 operating systems in
one:
800xl
800xl with reverse basic
800
WarpOS (a real fast SIO OS with reverse basic

No translator required - just flip a switch and your 800xl becomes an 800

Steven Tucker sells both APE and the WarpOS.

There is some software that was written for the 800 that won't run on an XL or XE. If you don't want to hack into the hardware to install multiple OSs, you can always use a translator disk. There are some to be found in the Atari 8-bit archives at Umich. The url is http://www.umich.edu/~archive/atari/8bit.
That will at least get you going -- provided you have a disk drive. I've never tried to boot a translator and then another program from my SIO2PC setup, so I don't know how it works.

> Are there programs the older 800 would run but the XL won't?

See above.

> Since I don't have a drive I plan on getting an SIO2PC cable so
> I can boot the atari off my PC. Any tips on this would be helpful.
> I have read that there is a similar product called APE, any pros/cons?

The SIO2PC cable was invented by Nick Kennedy, http://www.cswnet.com/~nkennedy/sio2pc.htm who also wrote and continued to revise the software necessary to run it. Nick doesn't make the cables any more, but there are plenty of people around who can put one together. APE is a product made by Steven Tucker http://www.nacs.net/~classics/. It will work with the traditional SIO2PC cable, or with some simplified designs. It offers more flexibility that the SIO2PC software.

> Any pointers to an XL user manual would be helpful, like disabling the
> built in BASIC on boot, etc.

To disable the BASIC on boot on an XL, just hold OPTION down as you turn on the computer. However, some installed multiple OSs reverse that procedure!

Actually I think at least AR2. I think I have it at :
http://home.sol.no/~olavese/index.htm along with some Antic Music Demos and
stuff. You can reach it directly with :
http://home.sol.no/~olavese/atari/a8dl.htm

Enjoy! Please let me know if anybody has the music from AR1 as I think that
is far better than AR2

4505. Jaguar Games Wanted,,,,..

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-18 00:00:00 UTC
From: liberator@acsplus.com
Message-ID: <7hqtqv$l8n$1@nnrp1.deja.com>
Source record: 52315

Hello,

I'm looking for MANY Jaguar games and I'm currently interested in
trading and/or purchasing them.

My most wanted at the moment would be:

CatBox
Memory Track
AVP
NBA Jam
Defender2000
I-WAR
MC3D
Just to name a few!

What do I have to trade?

Well, not exactly Jaguar stuff, but the following:
Atari 520ST
Apple IIgs with 5.25/3.25/color monitor, keyboard, no software.

For 2600:
California Games
Midnight Magic
Defender II
Thunderground,
Harbor Escape
Eggomania
Kung Fu Superkicks
Title Match Pro Wrestling
Snoopy and the Red Baron

2600 multi-game selector.

5200:
Rescue on Fractulus
Mario Bros.
Countermeasure
Kangaroo
(many many others!)

7800 system
7800 joysticks

Atari 8-bit 800 with ps, dd, td, some manuals...

Depending on what you have, possibly some Lynx games! =)

Please feel free to email all wants/sell/trade to Liberator@acsplus.com
or just contact me through ICQ! ---38352629 Nexar

Thanks,

Clint T.

I also have a LOT of other stuff at:
http://underworld.fortunecity.com/minesweeper/127

>Loading binaries from BASIC

Mark,

There is no USR-call to do this. There are however utils that are able to
do it, but I won't discus them now.

If you're using Turbo-BASIC, you can use BRUN"D:filename.ext" or
BLOAD"D:filename.ext" to ru/load such files...

If you use standard Atari-BASIC, with the use of Sparta-Dos (2.x or up) you
can load binaries with a XIO-call.

XIO 40,#IOCB,4,X,"D:filename.ext"

IOCB=IO-channel to use. If X<128 then Dos will use Run/Init-vectors from
the binary, if >127 then it'll just load the file without running it.

I think My-Dos also has such a way to load binaries, but I'm a sparta-only
user, so...

>SCSI, termination. No Atari 8-bit HD-controller with parity I'm aware
of.

The CSS Black-Box cannot handle SCSI harddisk which require parity.
But...

CSS made an upgrade-PAL to add the parity-signal (the 9th bit) to the
SCSI-bus of the Black-Box. This PAL had to be mounted on top of the HCT
line-driver/buffer nearby the SCSI resitor-pack and SCSI-bus.
It's a bit expensive (12,- USD or something) but it works.

I made my own upgrade, for about 1.- USD which works exactly the same, but
only requires a few more lines to "redirect" to that same HCT i.c... :-)

Isaac,

Yes, a diskbase-version of ACTION! exists, but it's a non-authorized hack..

It starts up with a message, displaying: "They say it couldn't be done", so figure-out...

Don't know where it came from or who it made/modified. It was in a pile of disks I got when I bought some used Atari-stuff. I installed the file under Sparta-Dos on my harddisk, and it seems to work, but since I don't know ACTION!, I don't know anything about compatiblity or "compiling-rules" or something...

Hello all,
I have made the plunge into my newly acquired 800XL and want to learn to program on it and I have a VERY embarrassing question.
How to I save and load from my 1050 floppy drive?
I have a book on game programming that came with a disk. I typed CLOAD and it started to load, but then I realized that there are most likely more than 1 program on the disk. The disk isn't labeled so I need to know what is on it. How do I find out the names of the files on the disk and how do I load those files (I assume CLOAD then the name of the program)? I assume saving a program is similar.
I am too used to DOS and Windows...
Please e-mail me at delliott@nac.net and don't be too hard on me.
Thanks,
David
PS I'm sure the same holds true for my 410 program recorder too...

Hi Isaac,

I see nothing wrong with your request for the Action Cart. I myself have made Action, Mac65, BasicXL, and BasicXE run from a single cartridge.

I 'purchased' all 4 OSS programming carts back in 1988 and had a very well known atarian show me how to open each OSS cart shell and remove the chips from each one and burn files from them. Each rom chip is 16k, and all I had to do was purchase a 64k eprom and burn/append each OSS rom into that 64k eprom. Then with a set of 3 micro toggle switches and several wires soldered to the appropiate legs of the 64k eprom made it a bank select switching cartridge. You just flipped the toggle switches in a certain position and you'd have the OSS cart of your choice in an instant. And no I didn't need a special bank select cartridge either, I just used a normal 16k OSS cart board, plugged in the 64k eprom, and mounted the 3 toggle micro switches on top of the plastic shell. It worked out very nice.

I didn't infringe on any copyrights because I legally purchased the OSS cartridges, and made the 4-in-1 cart just for MY use only and never would sell it. It's kind of like buying a software program and making a backup of it for your own protection.

The one thing I wanted to try but never got around to it was I wondered if I could of removed the BASIC chip from inside my 130XE and replaced it with that 64k eprom and mounted the toggle switches on top of the 130XE casing, and thus I would always have all 4 OSS roms available at anytime without needing to insert any cartridges?

If anyone knows if the BASIC chip inside the Atari can be replaced with an OSS chip I would like to know.

No, because OSS carts ARE SPECIAL BANK-SWITCHING carts! I don't mean
your bank switching. For example, Action! is more than 16K. It is
more like at least 24K or something like that. Only part of that is
mapped into the addressing spacing at any one time. If you only have
16K worth of Action! in your big 64K EPROM, then you aint' got all of
Action! in there my friend.

I also have action and it is only 16k. If it was anything else, it
would not work in MY special cart that has the 4 oss languages in it.
Basic XE with it's extentions loaded from disk is 24k or more.

The bank switching works something like this.
rom address $0000 $0FFF, cart address $B000, $BFFF
The rest is switched into the lower 4K of cart space.

James.

I don't think so. All my original (orange)
carts had 2 ea. 2764 Eproms. These were
shown on the papers covering the "window"
of the Eprom as "H" and "L". The black
carts were cheaper to produce (only 1 Rom
instead of 2). I'm quite sure that the way that
some of these get to be more than 16K
is whent the toolkits are loaded.
Incidently, I have both the "orange" and
"black" Action! carts & manuals, and there
certainly isn't anything in the newer (skinny,
small type) manual that says it is an different
from the old cart.

Hi Mike-
(And everyone else that reads this.)
I have been told by a couple of people that
you read CSA8 sometimes, so hopefully
you will read this. It is said that you are
still interested in Atari's, and perhaps are
still working on some of the FTE products.

If you are still interested, could you post
an update to the Atari community that
tells where you stand now with respect
to the FTE/ICD/OSS and other products
that you own the rights to? You could
send this for reposting by someone that
you trust, or you could post it
anonymously by using an email remailer.
At least we would know what your
thoughts/plans are, and perhaps it might
even lead to a meaningful dialogue.

To me the whole issue boils down to this:
"Are the remaining Atari users better off
with or without FTE and its products?"
My answer is obvious from this post -
we need Mike Hohman's talents and FTE's
products.

I hope you'll take me up on this.

Regards,
Larry White

The commands in ATARI BASIC is as follows:

LOAD "D:FILENAME.BAS" - D is for disk drive, if you have more than one
disk drive then you can use LOAD "D2:FILENAME.BAS" this will load the
program FILENAME.BAS from the second disk drive.

To save a file it is pretty much the same SAVE "D:FILENAME.BAS" etc..

You can also load then run a file by RUN "D:FILENAME.BAS"

By typing DOS you can get a menu of DOS options.

Filenames have the same rules as MS-DOS on a PC, including wildcards.

Disk directory can only be seen by going into the DOS menu and
selecting A.

Hope this answers you questions.

There are no embarrassing questions. We all had to start somewhere.

Firstly. is DOS loaded???
To load dos, turn on drive, instert the disk, close door then turn on
the computer.
you should hear a series of beeps comming from the speaker thenthe
ready prompt.
Anything else like errors or no loading at all means something is not
working.

From basic, enter DOS for the dos menu.
From dos, B to enter cartridge (basic).
From basic LOAD"D:program.ext. where program.ext is the name of the
program you wish to load.
SAVE"D:program.ext saves your program.
LIST"D:program.ext Lists the program to disk.
ENTER"D:program.ext Enters a listed program from disk.

The last two instructions do have a use but are not mandtory.
They are used to clear out the vairable table of unused vairables
because Atari basic can only have 128 vairables.

CLOAD and CSAVE are used for the 410 only.

James.

No. The first 4k of rom is at address $B000, $BFFF
The other 12K Is split into 3 4K blocks and switched in the $A000,
$AFFF cart space.
The cart also has the ability to be turned off under software control.
Of course, the cart doesn,t turn it self off.

Both versions work the same.

James.

The Action program itself would be different versions from the orange
to the black.
A few bugs fixed I would say. A recompile would be needed anyway for
the change of cart style because the bank switching is slightly
different form one style to another.

James.

Maybe it is some really rich person like Steve Jobs, or maybe John Tramiel who just wants to assemble a collection of primo 8bit stuff, and not sweat the prices...

It is definitely nice to have the boxes and original packing. That $232.00 Atari 400 was described as new-in-box.

vs

To email me just remove the X's and underline marks from my address.

4538. FT: XL/XE games

I have any XL/XE cassette tapes for trade.
No manuals.

Star Wars (Zeppelin Games version)
The Extirpator
Hacker
Loco
Orc Attack
Biodefense
Alf

... if anybody interested, let know...

(I'm looking just for another tapes or carts ... no disks)

This is turning into a most active thread!

I never looked at eBay. I have no reason to do so. But tell me, please,
those of you who do frequent the site, if the same thing is happening with
other old 8-bit machines?

What price can someone put on nostalgia, anyway?

Sounds like the places I go to. Saw a Dragon 32 this week complete with box and programming software. They used to have a stall that had hundreds of 2600 carts for £1 each. Needless to say I bought about 60 over a few visits.

I thought this readme file from the shareware version
of MAC/65 was appropriate for the occasion. It not
only is a great example of what Mike has done for the
Atari community in the past, but also the reference to
Star Wars is quite timely as well. Maybe Mike could start to
"make things right" by releasing more software he's purchased
rights for into the public domain. This could eventually
get people the products they paid for in the past, maybe
indirectly produced by someone else... but in any case,
it would be great to get a hold of some of these great
8-bit products again.

Hopefully, *some* sort of DOS is on the disk. Type "DOS"
at the "READY" prompt and see what happens. If there's no
DOS on the disk, then you'll need to get a copy of DOS from
somewhere.

You wrote about BASIC, so try to use it through XIO commands...

XIO a,#b,c,d,e$ General I/O call. This a little complicated and
may be expanded upon in a future revision. Just be aware of the
following:
a - command
b - channel to use (usually must be free)
c - auxillary mode 1
d - auxillary mode 2
e$ - file or device to act upon
Examples:
XIO 32,#1,0,0,"D:FILE,OLDFILE" - renames file
XIO 33,#1,0,0,"D:OLDFILE" - DELETES file
XIO 34,#1,0,0,"D:GAMES" - creates a directory in My- &
Sparta-DOS
XIO 35,#1,0,0,"D:NEWFILE" - locks a file from over-write and
deletion
XIO 36,#1,0,0,"D:NEWFILE" - UNlocks a locked file
XIO 40,#1,4,0,"D:PROG.OBJ" - loads and runs a binary file
(like "L" in Atari and MyDOS)
XIO 40,#1,5,0,"D:PROG.OBJ" - loads a binary file
(like "L" in Atari and MyDOS with the "/N" option)
XIO 41,#1,0,0,"D:GAMES" - changes default directory that
drive/subdirectory (all calls to "D:" will now occur within
that drive/directory)
XIO 254,#1,0,0,"D2:" - FORMAT a disk (in Atari DOS 2.5, this
is
format 'enhanced', to format 'single' density, use XIO 253)
(in MyDOS, this is format, but not 'enhanced', use

XIO 253,#<channel>,1,0,"D<drive>:" for format a drive in
enhanced
mode).
NOTE: 39 and 40 are the same. Also note the useage of AUX1 in
the
"XIO 40" example.

Hello! I was given a ton of software w/o manuals or
documentation.One that seems interesting is called Genie.
It appears to be like an ST desk accessory or MS-Dos TSR,
that is it loads and then disappears.I have some ANALOG
magazines that advertize this program and they promise
to be able to do several DOS functions "at the touch of a
key" I have tried every key combination I can think of,
and darned if I can make it work.
Can any one offer an idea?
Thanks to all!

Hello Steve & Andre,
for A.R. - the Dungeon there exists a "Dungeon Demo" that plays all
tunes from this great game, without having to walk around... Just choose
a letter from a menu and it will play any sound... Unfortunately I have
not yet seen any sound demo that does this for The City...
The "Dungeon Demo" is ofcourse a hacker demo and is now PD, avaiable at
many PD-Libraries or at least at Umich or ABBUC. Greets - Andreas

4559. Re: Action Cart Question?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-20 00:00:00 UTC
From: badbob1952@aol.comspamx
Message-ID: <19990520103310.08345.00003523@ngol02.aol.com>
Source record: 52275

Action is a 16K cart that takes up only 8K at any one time. 4K sticks the whole time the cart is active with the remaining 12K switching in as 3 more 4K banks, but only one at a time. Basic XL and Mac65 carts behave the same way. The idea was to allow a lot more space for your program. If I recall correctly, when the cart boots, the editor bank is active. When compiling, another one gets in. When a program actually runs, the library bank kicks in. I think the bank that sticks is the "monitor" bank, that control screen where one decides options and chooses to compile or go back to the editor or run a program.

4560. ICD RTime8 still available

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-20 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7i19bh$8d11@news.ajou.ac.kr>
Source record: 52276

Hi Folks,

A while back I posted for sale a ICD RTime8 cartridge
with original disk and manual.

I had several interested persons. One person agreed to
purchase it, but since that time I have not heard from
that person.

So, I still have this cartridge for sale below what several
folks offered me for it.

The first person who e-mails me and offers me $25.00 plus
$3.00 for shipping gets it.

I cannot take any offers from folks outside of the USA/North America
on this item.

Also, this item has a money back guarantee, If you are not
satisfied with it after receiving it then you may return it for
a refund as long as the cartridge is not altered.

The battery in the cart has been replaced and does work.

Only folks seriously interested in purchasing it should
e-mail me.
Thanks and good luck,
phantomm@kih.net

Without DOS you can't read a disk, but most pre-recorded disks have some
sort of DOS. First you turn on the drive and insert the disk, then turn on
the computer. If it says "BOOT ERROR", you need to get a DOS disk.

4564. SIO 2 PC Help...

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-20 00:00:00 UTC
From: cryorunner@aol.com
Message-ID: <cryorunner-2005991835250001@dt086n0a.san.rr.com>
Source record: 52280

I'm trying to get my Atari stuff preserved for posterity (yea, that Defender/Berserk rip-off that I wrote half in BASIC and half in assembly).

So I built an SIO2PC cable (MAX232 and '368 tri-state, pin 6 RI), and hooked it up to my Compaq Prolinea 486/66 (my only consession to the Intel world). But I can't seem to get SIO2PC v.4 working on the thing. BUT, I can get APE 1.17 to work (two-chip mode).

Anyone out there have any experience with using an old Compaq and the SIO2PC? Are there special timing issues I need to get right? I just can't justify the price of APE, and don't really need the features. I would pay for SIO2PC v.4, but it doesn't seem to work.

The only thing I changed in the SIO2PC cable is that I used pin 4 of the SIO cable as the ground, like most other designs, instead of pin 6 like the instructions said. But I haven't tried switching this, as APE seems to work fine under the same set-up

Thanks in advance for any tips.
-Rhett

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Exactly like a 'portable' garage sale - except that they are
all in one place - the same place - every week. No more driving
all over town looking for those little road-side signs misguiding
you to a garage sale that finished three hours ago. It's better for
the buyers - who can effectively hit every garage sale in town in
under two hours - and better for sellers who are far more likely
to find somebody who actually wants that aerobic step video or
Barry Manilow LP. I read somewhere the car boot sale has over taken
church as the no.1 reason the British public get out of bed on a
Sunday morning - which is probably why it stands zero chance of
ever working here in the MidWest :(

Often the bad chip is *alot* hotter than the others. That's how
I fixed my TI-99/4A when it blew the video chip a couple of years
back.

Ok the expitement continues, I have the XF551 3 1/2 in drive, and several 720k disks. The Drive Larry has will read the XF551 720k disks and execute files placed on it with a 551. This is done by changing the drive mech to a 3 1/2 in 720k mech. Unless you have the file on a 3 1/2 inch disk to boot the Percom you need a file to change the drive on the fly a P/D program uploaded to my old BBS a few years ago. Have it somewhere but can't remember the name of it, was written by Kenneth Burgess.

SO... now I finally figured out what a "boot sale" is.
I've heard several UK dudes mentioning obtaining buggery
Ataris at these mysterious "boot sales". Now it looks like
its a car boot (or trunk), right? So do people just drive
up and open their trunks in some vacant lot, and you all
go down an buy stuff? Wow what an amazing idea... like a
portable garage sale.

P.S. I've got 2 600XLs, both obtained at Value Villages,
and every chip is socketed. From the serial # it looks like
they are 83s. But I've repaired a few 800XLs in the past
by just replacing chips one by one until you find the one
thats bad.

see ya,
Dan

Source record: 52284

I just purchased a couple of new Toshiba 360K
floppies, and as delivered, they would not respond
in my XF551. I played with the jumpers and
got it working, but there are 9 jumpers in the
jumper block. Does anyone know what the
"?" designations mean?

LI = ? (Could be L1)
LD = ? (Could be L0)
DS3
2
1
0 (Double Sided Unit #0 - 3)
TERM = Termination
DKC = ?
RY = ?

These are nice drives; now if I can
only find out what all the jumper
markings mean!

Thanks,
Larry White

If you're using a two-chip design, you have to modify the SIO2PC software to accept the two-chip. There is a procedure in the docs for using DOS's debug to do this. Basically you have to change the "sense" of one of the lines while in debug and then write the revised program back to disk. After doing it, the virus checksum will be off, but you can then save the new one.

I wish I could be more specific, but the last time I did this was several years ago.

Good luck.

Alan

Us UK Atari er 'dudes' normally just go looking for the Atari's and
forget about the buggery. Either that or the US folk got a strange
upgrade that us UK peeps didn't :)

>Now it looks like its a car boot (or trunk), right?
>So do people just drive up and open their trunks in
>some vacant lot, and you all go down an buy stuff?
>Wow what an amazing idea... like a portable garage sale.

Similar idea, it did start out as an open area with cars and people
buying from the 'trunk' as you would say. Now its more of a fair type
thing with tables rather than cars.

What we don't get so much in the UK are the Atari's in the 'thrift'
stores as you call them. I did look every time I went to Florida just
incase I saw some good bits but I never saw 1 single item!

Well, I guess you never know these days Jon. It ain't the 80s no
more, and these awesome carts are **nowhere** to be found. You might
want to check out how this auction ended up.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&tc=ps&item=104393892

One thing I would say is that at least its less expensive than
Microsoft's Visual Studio, while being certainly more fun to use, and
very probably better written software overall.

best regards,
Dan Vernon

I think it was SHIFT+CONTROL+ESC... if that dosen't make it,
try pressing TAB too... (I don't remeber exactly because it
was a friend who had it, not me)

With DOS 3.0 you can, as I recall, use:

XIO 41,#IOCB,0,0,"D:filename.ext"

One of many reasons I prefer 3.0 over 2.x

[re: $232 Atari 400]
OK, I guess that's what I'd expect from E-Bay (and auctions in general).

BUT... when I started to think about it, I realized that it's a lot less than it cost in the first place. I remember my original 400, with 8k, a tape drive, and a couple of cartridges cost at least $500 US. And this was in '79 dollars. Kind of puts things in perspective.

For Sale - Any Offers?

I would ideally like offers for 'the lot', but I will consider splitting.

Colin Clifford
cwc@dircon.co.uk

Atari 8-Bit Hardware

Atari 400 (32K) with Power Supply
Atari 800XL - Needs new RF Modulator, otherwise fine with Power Supply
Atari 1050 Disk Drive with US Doubler enhancement and write protect switch - Boxed, with DOS disks / Atari Corp. Diskette Pack, Power Supply and SIO Cable
Atari 850 Interface with Photocopied Instruction Manual
Atari XC12 Program Recorder - Mint and Boxed with instructions
3 x Atari 1027 Printer Ink Rollers
SIO to Midi Cable (Cable Only - No Software)

Atari 8-Bit Diskettes - With Full Packaging and Instructions

Atariwriter Plus - Atari Corp.
The Living Daylights - Domark
Gemstone Warrior - SSI / US Gold
Spitfire 40 - Mirrorsoft
Greatest Hits Vol .1 - Databyte (2 copies)
Mercenary - Novagen
Beach Head II - Access / US Gold
D-Bug - Electronic Arts
Music Construction Set - Electronic Arts
Sidewinder - Futureware
Silent Service - Microprose / US Gold
Pooyan - DataSoft

Atari 8-Bit Cartridges - With Full Packaging and Instructions

Defender - Atari Corp.
Computer War - Thorn EMI
Track & Field with Arcade Controller - Atari Corp.

Atari 8-Bit Cartridges - Loose

Miner 2049er - Big Five Software
Astrochase - Bare Board (no case) - Databyte

Atari 8-Bit Cassettes - With Full Packaging and Instructions

Space Shuttle - Activision
Milk Race - Mastertronic
Ballblazer - Lucasfilm Games / Activision
Tapper - SEGA / US Gold
International Karate - System 3
Superman - First Star / Prism
Kenny Dalglish Soccer Manager - Cognito
Kick Off - Anco
Plastron - Harlequin
Feud - Bulldog / Mastertronic
Panther - Mastertronic
BMX Simulator - Code Masters
Mirax Force - Zeppelin Games
Tank Commander - Sparklers
Talladega - Top Ten
Molecule Man - Mastertronic
Cosmic Pirate - Byte Back
Ace of Aces - Kixx
Micro Rhythm - Firebird
Winter Wally - Alternative
Ninja Master - Firebird
Tanium - Players
Fantastic Soccer - Zeppelin
Stack Up - Zeppelin
Collapse - Firebird
Bruce Lee - Datasoft / US Gold

Honestly, I'm really amazed too. And I think the congrats is due
to James King as its his auction. I was just one of the bidders,
and not the winning one.
I felt my bidding was a bit on the outrageous side, yes... but
the Commodore items I've been getting rid of on ebay have been doing
```

quite well, and I just wanted to splurge a bit. Also, I guess I'm hoping that demand like this will spur someone on to re-release these products to all us 8-bitters out here (of course the software rights need to be worked out).

Larry, as far as I know it's supposed to work. I haven't tried it because I have an old, two-chip sio2pc interface that I got when Nick was still assembling them.

Run the program and look at the version number at the top of the screen. If the version number has an "i" in it, it's set for a two-chip cable. If that's the case, there's a procedure outlined in the docs for changing it. It would be the opposite of the procedure I gave the last guy a couple of days ago. You have to change the "sense" of one of the lines while running debug, resave the program, and then tell it to accept the new virus checksum when you exit the program.

APE makes the change from its menu, but I believe that the same thing happens.

Ok I used to use an 850 to hook a modem up to my old ataris.. but it's come to my attention, that there aren't even any of those slow modems out anymore!

what would I need to hook up my Atari to the PC to transfer files? I think I have alot of things that I haven't seen posted anywhere...

Also, is there a easy way to transfer a whole disk image to the PC?

You could use a null modem connection to move files from the Atari to the PC, but that assumes that you have an interface on the Atari that would allow such a cable to be connected. The 850, the P: R: Connection, the MIO and the Black Box could all do it. An R-Vertor cable could also be used. You'd need a null-modem converter in any case, and, except for the R-Vertor, you'd need an Atari-specific modem cable. You'd also need a terminal program running on the PC and another one (BobTerm, for example) running on the Atari.

> Also, is there a easy way to transfer a whole disk image to the PC?

No problem! Build an SIO2PC device and run either SIO2PC or APE software on the PC.

Alan

Yes APE/ProSystem and SIO2PC are designed specifically for that, and more
depending on which program you use.

You can get APE at the URL below. SIO2PC can be found at the various
Atari archives. You will need a special cable to use either. Plans
are available in either the APE or SIO2PC archive.

I'm gonna get a 850 from bob klaas here, and he said he'll do a term disk for me.. hopefully, I'll have some new goodies to share with you guys in the upcoming month or so....

I'll probably add an Atari page on my homepage, and add the new Atari stuff there...

Yeah Bob, I wondered that too. Then I did a bidder search including
all completed auctions. It looks like since 4/27/99, the guy
has been buying Atari stuff like a maniac. Probably has spent
thousands in just a few weeks.
Who knows... I'd probably do the same myself if money and cubic
feet were no object.

To: Info-Atari8@naucse.cse.nau.edu

Just thought I'd pass along some old Atari vaporware tech notes
I happened to come across recently...

HARDWARE DESCRIPTION OF THE EXPANSION BOX

The box consists of two main elements, the Buffer Box and the
Expansion Box Chassis. This document will concern itself with
the
hardware inside the Expansion Box Chassis as the Buffer Box is a
simple
signal buffer unit. The Expansion Chassis contains a backplane,
for
option connection, a power supply and I/O channels.

The I/O channels consist of two serial RS232C channels and one
Centronics type parallel output port. These functions are
created by
two 68B50 ACIAs, one 68B21 PIA, and a BR1943 baud rate generator.
Figure 1 shows the locations of the devices in the memory map.
All the
devices respond to Parallel Bus Device #6.

Location	Device
D100H	68B50 Channel A
D104H	68B50 Channel B
D108H	68B21
D110H	1943

Figure 1

Parallel Channel Description

The Parallel channel uses a 68B21 PIA. There are 11 signals implemented in the Centronics Interface. These signals are D0-D7, Data Strobe, Busy, and Fault. The data lines use port A in the PIA and are output only. Data Strobe is an output line from port B bit 4 which is used to strobe data to the printer. This signal should be active after data is stable and the printer is not busy. Busy is an input line of port B bit 5. This input controls the flow of data to the printer; it should be checked before next data transmission. Fault is an input of port B bit 6. This input indicates if the printer had a fault (ie. paper out) and should always be checked. Figure 2 shows the port assignments for the PIA. The register types and control bits are the same as the standard Atari PIA used in current computers.

Port	Direction	Description
A0	Output	Data Bit 0
A1	Output	Data Bit 1
A2	Output	Data Bit 2
A3	Output	Data Bit 3
A4	Output	Data Bit 4
A5	Output	Data Bit 5
A6	Output	Data Bit 6
A7	Output	Data Bit 7
B0	Input	DSR' Channel A
B1	Output	DTR' Channel A
B2	Output	DTR' Channel B
B3	Input	DSR' Channel B
B4	Output	Data Strobe'
B5	Input	Busy'
B6	Input	Fault'
B7	Not Used	Not Used

Figure 2

Baud Rate Selection

The baud rate for the two serial channels is created by a BR1943 baud rate generator. This device creates two different baud rates using one write only register. The upper four bits of this register controls the

baud rate for Channel B, the lower four bits control Channel A.
Figure
3 shows the four bit combinations for the 16 different baud
rates.

Sel Value	Baud Rate
0000	50
0001	75
0010	110
0011	134.5
0100	150
0101	200
0110	300
0111	600
1000	1200
1001	1800
1010	2400
1011	3600
1100	4800
1101	7200
1110	9600
1111	19200

Figure 3

Serial Channels
The two serial channels are a full RS-232C type. These
channels use
the baud rates from above, handshake internal to the ACIA as well
as
extra handshake lines from the PIA. The ACIA operation is
described
below as well as register locations. The software should provide
correct operation of the extra handshake lines for full modem
control.

ACIA REGISTERS DESCRIPTION

The ACIA has internal registers on the chip that are used for
the
status, control, receiving, and transmitting of data. The
content of
each of the registers is summarized in Table 1.

Data Bus #	Transmit Data Register	Receive Data Register	Control Register	Status Register
0	Data 0	Data 0	C D Sel 1 CRO	RDRF
1	Data 1	Data 1	C D Sel 2 CR1	TDRE

2	Data 2	Data 2	Word Sel 1 CR2	DCD'
3	Data 3	Data 3	Word Sel 2 CR3	CTS'
4	Data 4	Data 4	Word Sel 3 CR4	Frame Error
5	Data 5	Data 5	Transmit Con 1 CR5	Receiver Overrun
6	Data 6	Data 6	Transmit Con 2 CR6	Parity Error
7	Data 7	Data 7	Rec Int En CR7	Interrupt Request

Table 1
Definition of ACIA Register Contents

TRANSMIT DATA REGISTER (TDR)
Data is written in the Transmit Data Register during the negative
transition of the enable (E) when the ACIA has been addressed and RS .
R/W is selected. Writing data into the register causes the Transmit
Data Register Empty bit in the Status Register to go low. Data can
then be transmitted. If the transmitter is idling and no character is
being transmitted, then the transfer will take place within one bit
time of the trailing edge of the Write command. If a character is
being transmitted, the new data character will commence as soon as the
previous character is complete. The transfer of data causes the
Transmit Data Register Empty (TDRE) bit to indicate empty.

RECEIVE DATA REGISTER (RDR)

Data is automatically transferred to the empty Receive Data Register
(RDR) from the receiver deserializer (a shift register) upon receiving
a complete character. This event causes the Receive Data Register Full
bit (RDRF) in the status buffer to go high (full). Data may then be
read through the bus by addressing the ACIA and selecting the Receive
Data Register with RS and R/W high when the ACIA is enabled. The
non-destructive read cycle causes the RDRF bit to be cleared to empty
although the data is retained in the RDR. The status is maintained by
RDRF as to whether or not the data is current. When the Receive Data
Register is full, the automatic transfer of data from the Receiver

Shift Register to the Data Register is inhibited and the RDR contents
remain valid with its current status stored in the Status register.

CONTROL REGISTER
The ACIA Control Register consists of eight bits of write-only buffer
that are selected when RS and R/W are low. This register controls the
function of the receiver, transmitter, interrupt enables, and the
Request-to-Send peripheral/modem control output.
Counter Divide Select Bits (CR0 and CR1) - The counter Divide Select
Bits (CR0 and CR1) determine the divide ratios utilized in both the
transmitter and receiver sections of the ACIA. Additionally, these
bits are used to provide a master reset for the ACIA which clears the
Status Register (except for external conditions on CTS and DCD) and
initializes both the receiver and transmitter. Master reset does not
affect other Control Register bits. Note that after power-on or a
power fail/restart, these bits must be set high to reset the ACIA.
After resetting, the clock divide ratio may be selected. These counter
select bits provide for the following clock divide ratios:

CR1	CR0	Function
0	0	Divide by 1
0	1	Divide by 16
1	0	Divide by 64
1	1	Master Reset

Word Select Bits (CR2, CR3, and CR4) - The Word Select bits are used
to select word length, parity, and the number of stop bits. The
encoding format is as follows:

CR4	CR3	CR2	Function
0	0	0	7 Bits Even Parity 2 Stop Bits
0	0	1	7 Bits Odd Parity 2 Stop Bits

0	1	0	7 Bits Even Parity 1 Stop Bit
0	1	1	7 Bits Odd Parity 1 Stop Bit
1	0	0	8 Bits 2 Stop Bits
1	0	1	8 Bits 1 Stop Bit
1	1	0	8 Bits Even Parity 1 Stop Bit
1	1	1	8 Bits Odd Parity 1 Stop Bit

Word length, Parity Select, and Stop Bit changes are not buffered and
therefore become effective immediately.

Transmitter Control Bits (CR5 and CR6) - Two Transmitter Control bits
provide for the control of the interrupt from the Transmit data
Register Empty condition, the Request-to-Send (RTS) output, and the
transmission of a Break level (space). The following encoding format
is used:

|CR6|CR5|Function |

0	0	RTS'=LOW Trans INT Disabled
0	1	RTS'=LOW Trans INT Enabled
1	0	RTS'=HIGH Trans INT Disabled
1	1	RTS'=LOW Trans a BREAK CHAR

Receive Interrupt Enable Bit (CR7) - The following interrupts will be
enabled by a high level in bit position 7 of the Control Register
(CR7): Receive Data Register Full, Overrun, or a low to high
transition on the Data Carrier Detect (DCD) signal line.

STATUS REGISTER
Information on the status of the ACIA is available to the MPU by
reading the ACIA Status Register. This read-only register is selected
when RS is low and R/W is high. Information stored in this register
indicates the status of the Transmit Data Register, the Receive Data
Register and error logic, and the peripheral/modem status inputs of the
ACIA.

Receive Data Register Full (RDRF), Bit 0 - Receive Data Register Full
indicates that received data has been transferred to the Receive

Data
Register. RDRF is cleared after an MPU read of the Receive Data
Register or by a master reset. The cleared or empty state
indicates
that the contents of the Receive Data Register are not current.
Data
Carrier Detect being high also causes RDRF to indicate empty.
Transmit Data Register Empty (TDRE), Bit 1 - The Transmit Data
Register Empty bit being set high indicates that the Transmit
Data
Register contents have been transferred and that new data may be
entered. The low state indicates that the register is full and
that
transmission of a new character has not begun since the last
write data
command.
Data Carrier Detect (DCD), Bit 2 - The Data Carrier Detect bit
will
be high when the DCD input from a modem has gone high to indicate
that
a carrier is not present. This bit going high causes an
Interrupt
Request to be generated when the Receive Interrupt Enable is set.
It
remains high after the DCD input is returned low until cleared by
first
reading the Status Register and then the Data Register or until a
master reset occurs. If the DCD input remains high after read
status
and read data or master reset has occured, the interrupt is
cleared,
the DCD status bit remains high and will follow the DCD input.
Clear-to-Send (CTS), Bit 3 - The Clear-to-Send bit indicates
the
state of the Clear-to-Send input from a modem. A low CTS
indicates
that there is a Clear-to-Send from the modem. In the high state,
the
Transmit Data Register Empty bit is inhibited and the
Clear-to-Send
status bit will be high. Master reset does not affect the
Clear-to-Send Status bit.
Framing Error (FE), Bit 4 - Framing error indicates that the
received
character is improperly framed by a start and a stop bit and is
detected by the absence of the 1st stop bit. This error
indicates a
synchronization error, faulty transmission, or a break condition.
The
framing error flag is set or reset during the receive data

transfer
time. Therefore, this error indicator is present throughout the
time
that the associated character is available.
Receiver Overrun (OVRN), Bit 5 - Overrun is an error flag that
indicates that one or more characters in the data stream were
lost.
That is, a character or a number of characters were received but
not
read from the Receive Data Register (RDR) prior to subsequent
characters being received. The overrun condition begins at the
midpoint of the last bit of the second character received in
succession
without a read of the RDR having occurred. The Overrun does not
occur
in the Status Register until the valid character prior to Overrun
has
been read. The RDRF bit remains set until the Overrun is reset.
Character synchronization is maintained during the Overrun
condition.
The Overrun indication is reset after the reading of data from
the
Receive Data Register or by a Master Reset.

Parity Error (PE), Bit 6 - The parity error flag indicates that
the
number of highs (ones) in the character does not agree with the
preselected odd or even parity. Odd parity is defined to be when
the
total number of ones is odd. The parity error indication will be
present as long as the data character is in the RDR. If no
parity is
selected, then both the transmitter parity generator output and
the
receiver parity check results are inhibited.
Interrupt Request (IRQ), Bit 7 - The IRQ bit indicates the
state of
the IRQ output. Any interrupt condition with its applicable
enable
will be indicated in this status bit. Anytime the IRQ output is
low
the IRQ bit will be high to indicate the interrupt or service
request
status. IRQ is cleared by a read operation to the Receive Data
Register or a write operation to the Transmit Data Register.

Expansion Box Specifications
7/27/83

1.0 Introduction
The Expansion Box will be a buffered extension of the Parallel

Bus
Interface (P.B.I.) allowing system expansion and enhancement.
The bus
will enable the consumer to connect a variety of different
devices to
the Parallel Bus Interface. Some future devices are listed
below.
1) Disk Drive Controller-*
2) Votrax-
3) Modem (300 and/or 1200)-*
4) Touch Tone Decoder-
5) EPROM Programmer-
6) B.S.R. Controller Interface-
7) Relay Switch Card-
8) IEEE 488 Control Card-*
9) Real Time Clock-
10) 80 Column Display-*
11) Printer Spooler/Buffer-
12) APPLE Card-*
13) VCS Adapter Card-*
14) A/D Converter Card-*
15) Infra Red Interface-*
16) Hard Disk Interface-*
17) Music Card-
18) Speech Recognition-*
19) Ram Disk-*
20) Battery Back-up CMOS RAM-
21) Corvus Interface-*
22) Ethernet Interface-*
* indicates a smart device.

1.1 Product Objectives
A. To provide future system expansion.
B. To provide multiple device access to the P.B.I.
C. To provide an interface standard to envoke interest from
peripheral manufacturers in developing P.B.I. Devices.

1.2 References
Sweet 16 Expansion Box Specification, A. Chopra
P.B.I. Specification, S. Miller
SURELY O.S. Rom Specification, S. Scheiman R. Nordin
Software Implementation of Parallel Devices, R. Nordin

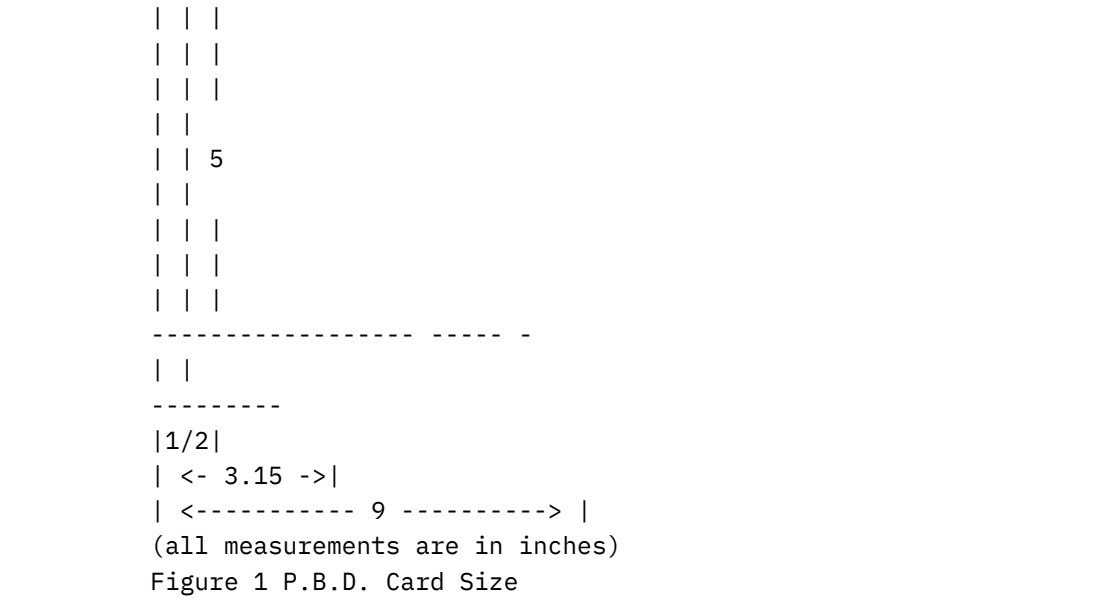
2.0 Product Description
The Expansion Box will provide two RS-232C Serial Channels and
one
Centronics type Parallel Output Port in addition to eight (8)
expansion
slots. The connection to the XL-Series computer is made through
the
Parallel Bus Interface. Devices that plug into the P.B.I. are

called
Parallel Bus Devices (P.B.D.). The Expansion Box is a P.B.D..
The
Interface in the Expansion Box to the expansion devices is called
the
Expansion Box Interface (E.B.I.). Modules that plug into the
expansion
slots will be called Expansion Box Devices (E.B.D.).

2.1 Mechanical

2.1.1 Appearance
The Expansion Box should match the styling of the current XL
product
line. The Box should have all connections from devices, power,
and bus
signals in the rear of the box. The power switch and power
indicator
light should be placed on the front panel.

2.2.2 Design Concepts
The Expansion Box should not require more than one square foot
of
table space. It should also be able to support a 13 inch color
television. The top must be easily removable so the user can
access
the option cards, but not be able to access the power supply or
come in
contact with the Line Voltage. The Box will support eight 9 by 5
inch
option cards (see figure 1).



(all measurements are in inches)
Figure 1 P.B.D. Card Size

2.2 Electrical

2.2.1 Expansion Box Interface
The E.B.I. contains all the signals in the P.B.I. plus power for the
E.B.D.. The description of the E.B.I. in this document is similar to
that of the P.B.I. but note the differences in timing and loading.

2.2.1.1 Connector
The Expansion Box Interface signals will be accessible through a
50-pin connector. This connector is an AMP type 67987-4. It will mate
to a standard card edge with gold plated fingers at .100 inch centers.

Figure 2 Expansion Socket

2.2.1.2 Signals
Shown in Figure 2 is the pin-out of the connector looking into the
expansion box. The signal pin numbers and signal names are described
below.

Pin 2 EXTSEL' External Select (Input) ==> This open
collector
line is generated internally by the Expansion Box Device
(E.B.D.).
This signal should be active low whenever EXTENB is active and
the
E.B.D. is selected and there is a valid E.B.D. address on the
bus.
EXTSEL' causes a CAS' inhibit on the main board allowing a
remapping
process. Although an E.B.D. can be mapped in any VALID RAM
location,
these devices should follow the ATARI guidelines for E.B.D.
locations
so future ATARI devices can be used. The drive device should be
capable of sinking 10mA.
Pin 3 A0 Address Line 0 (Output) ==> Address line 0 is a
buffered
output from the microprocessor.
Pin 4 A1 Address Line 1. Same as above.
Pin 5 A2 Address Line 2. Same as above.
Pin 6 A3 Address Line 3. Same as above.
Pin 7 A4 Address Line 4. Same as above.
Pin 8 A5 Address Line 5. Same as above.
Pin 9 A6 Address Line 6. Same as above.
Pin 11 A7 Address Line 7. Same as above.
Pin 12 A8 Address Line 8. Same as above.
Pin 13 A9 Address Line 9. Same as above.
Pin 14 A10 Address Line 10. Same as above.
Pin 15 A11 Address Line 11. Same as above.
Pin 16 A12 Address Line 12. Same as above.
Pin 17 A13 Address Line 13. Same as above.
Pin 18 A14 Address Line 14. Same as above.
Pin 20 A15 Address Line 15. Same as above.
Pin 21 D0 Data Line 0 (Bi-directional) ==> Data line 0 is a
buffered bi-directional data line.
Pin 22 D1 Data Line 1. Same as above.
Pin 23 D2 Data Line 2. Same as above.
Pin 24 D3 Data Line 3. Same as above.

Pin 25 D4 Data Line 4. Same as above.
Pin 26 D5 Data Line 5. Same as above.
Pin 27 D6 Data Line 6. same as above.
Pin 28 D7 Data Line 7. Same as above.
Pin 31 B02 Buffered Phase 2 Clock (Output) ==> This clock
output
line is a buffered phase 2 clock from the processor.
Pin 34 RST' Reset (Output) ==> Reset is an active low signal
which
occurs either on power-up or by depressing the reset key on the
computer.

Pin 35 IRQ' Interrupt Request (Input) ==> This open
collector line
creates an interrupt on the microprocessor. The interrupt can
then
invoke the handler ROM or other service routines for the E.B.D..
The
driving device should be capable of sinking 10mA.
Pin 36 RDY Ready (Input) ==> This open collector input
signal
allows the E.B.D. to halt the microprocessor ONLY during read
cycles.
This will extend the read cycle for slow peripherals. The
driving
device should be capable of sinking 10mA.
Pin 38 EXTENB External Decoder Enable (Output) ==> This
output
goes high when there is a valid ram access. Any E.B.D. can map
during
a valid EXTENB but the E.B.D. should only map in according to
ATARI
specified address locations.
Pin 40 REF' Refresh (Output) ==> This output can be for
refresh
timing on volatile memories connected to the E.B.I..
Pin 41 CAS' Column Address Strobe (Output) ==> This output
can be
used for access of DRAM external to the computer. Due to timing
restrictions caution should be taken when using this signal in
the
expansion box.
Pin 43 MPD' Math Pack Disable (Input) ==> This open
collector
input is used to disable the math pack section of the OS ROM
(D800H-DFFFH). This should be done when the E.B.D. is selected
and has
a handler resident. The driving device should be capable of
sinking
10mA.
Pin 44 RAS' Row Address Strobe (Output) ==> This output can
be
used for access of DRAM external to the computer. Due to timing
restrictions caution should be taken when using this signal in
the
expansion box.
Pin 46 LR/W' Latched Read Write (Output) ==> This output is
active
high for a read cycle and active low for a write cycle.

Pin 49 AUDIO Audio In (Input) ==> This line is tied directly
to

the audio summation network of the computer. The audio signal
input is
100 mV peak to peak with 4.7K ohm source impedance.
Pins 1,10,19,29,30,32,42,45,50 are Ground (GND).
Pins 33,47,48 are +5 Volts.
Pin 37 is -12 Volts.
Pin 39 is +12 Volts.

2.2.1.3 Interface Requirements
For peripherals to interface through the E.B.I. to the computer
the
following requirements must be followed.

2.2.1.3.1 D.C. Characteristics
All E.B.I. outputs from the Buffer Box have the capability of
driving
TTL load.
All E.B.I. open collector input lines must be able to sink 10mA
(min)
at .4V (max).
All E.B.I. non-open collector input lines except AUDIO must
have the
drive capability of 48mA at logic 0 (Iol) and -15mA at logic 1
(Ioh).
All E.B.I. signals except AUDIO will be at standard TTL logic
levels.
The AUDIO input line must drive a 4.7K Ohm source impedance
with a
100mV peak to peak signal.

2.2.1.4 Hardware Device Protocol
The E.B.I. is designed to support two types of devices. The
first is
an Expansion Box Peripheral (E.B.P.) and the second is an
External
Application Cartridge (E.A.C.).

2.2.1.4.1 Expansion Bus Peripherals (E.B.P.)
The E.B.P.s have the following characteristics:
1. The interface between the E.B.P. and the CPU is defined
through
the handler/OS resident in the OS ROM. The OS can support 8
devices at
one time with only one enabled during any given interval.

2. Every E.B.P. has a unique handler that resides in the CPU
memory
from D800H-DFFFH. The ROMS containing the code for these
handlers are
physically resident on the respective E.B.P.s. To access this
handler,
the math pack must be disabled with MPD'. When the math pack is

disabled (this should happen whenever the E.B.P. is selected and has an
external handler) the computer will generate EXTENB for the math pack
area. The E.B.P. must generate the correct EXTENB/EXTSEL' protocol.
If the device does not generate EXTSEL' the CPU will access (in the 64K
computers) an unused area of ram. This area should not be used since
all computers of this series do not have that area of ram.
3. The location D1FFH in the CPU memory map is reserved for passing
control information between the CPU and the E.B.P.s. The CPU selects
one of the E.B.P. devices by writing a "1" into the desired bit in
location D1FFH. The device can be deselected by writing a "0" into the
desired bit.

7	6	5	4	3	2	1	0
D7	D6	D5	D4	D3	D2	D1	D0

Therefore the CPU can then access 8 devices, one at a time. If the
IRQ' line is pulled "low" the CPU can read the status for location
D1FFH and locate the requesting E.B.P.. A "1" in a bit Ix (where x=0
to 7) corresponds to an interrupt in E.B.P. x. If the bit is a "0"
then the device has not caused the interrupt. The E.B.P. must clear
the interrupt flag when the interrupt is being serviced.

7	6	5	4	3	2	1	0
I7	I6	I5	I4	I3	I2	I1	I0

4. An E.B.P. should assert MPD' only when it is selected. An E.B.P.
should assert EXTSEL' only when it is selected and if EXTENB' is
asserted.
5. An E.B.P. may respond to any selects D0 through D7. It is
recommended that the E.B.P.s have configuration switches to allow them
to respond to any one of the selects. Some of the computer systems use
the E.B.I. to support internal devices therefore the user should

check
each manual for device locations. If the system has devices in
specific locations, those are reserved in that computer.
6. An E.B.P. handler may respond to addresses in the region
D800H-DFFFH only when it is selected.
7. A peripheral may respond to addresses in the region D100H
to
D1FEH only when selected.
8. The E.B.P.s will have software priority over the SIO
peripheral
when they are addressed generically.

9. Data transfer between the CPU and the E.B.P. is under the
control
of the peripheral handler for the E.B.P.s. The peripheral
handler may
or may not be in the E.B.P. Data transfer is handled by a
combination
of code in the O.S. and the E.B.P.
10. The E.B.P.s shall work if a cartridge is present in the
cartridge slot.
11. The CPU address space from D600H to D7FFH is reserved for
E.B.I.
devices as follows:

Device	Range	Size
D0	D600H-D61FH	32 Bytes
D1	D620H-D63FH	32 Bytes
D2	D640H-D65FH	32 Bytes
D3	D660H-D67FH	32 Bytes
D4	D680H-D69FH	32 Bytes
D5	D6A0H-D6BFH	32 Bytes
D6	D6C0H-D6DFH	32 Bytes
D7	D6E0H-D6FFH	32 Bytes

The region from D700H to D7FFH is reserved for use by ATARI.
The CPU
address space from D600H to D7FFH is always mapped to the E.B.I.
and
does not require the EXTENB/EXTSEL' protocol. Some units may
have
devices mapped on the E.B.I.; these devices are only active when
selected but care must be taken when using a unit with onboard
devices.

2.2.1.4.2 External Application Cartridges
The "External Application Cartridge" (EAC) is a generalization
of the
E.B.P.. They have the following characteristics:
1. An EAC can reside at any or all of the locations in the
region

0000H to BFFFH for which the EXTENB is generated. They may
respond to
these addresses only when "opened".
2. The EACs must be opened by the protocol given for the
E.B.P.s.
3. The EACs must conform to the EXTENB/EXTSEL' protocol.
4. The EACs must have a handler (resident at location
D800H-DFFFH)
that controls their operation. The EACs must conform to
conditions (4)
through (11) of section III. B. above.
5. The EACs will work if a cartridge is present in the
internal
cartridge slot.

2.2.2 I/O Channels
The expansion box contains two RS-232C serial channels and one
Centronics type parallel printer channel. Both the serial and
parallel
channels are preset to device #6. This device cannot be used in
the
Expansion Box.

2.2.2.1 Serial Channel Description
The Expansion Box will have two RS-232C Asynchronous serial
channels
capable of simultaneous two way communication. Both channels
should be
addressable through software via CIO using the same format as the
serial channels in the ATARI 850. The baud rate will be software
selectable from 16 baud rates (see Table 1). The baud rates of
the two
channels are to be independent of each other.

Sel Value	Baud Rate
0000	50
0001	75
0010	110
0011	134.5
0100	150
0101	200
0110	300
0111	600
1000	1200
1001	1800
1010	2400
1011	3600
1100	4800
1101	7200
1110	9600

| 1111 | 19200 |

Table 1 Baud Rate Selection Chart

2.2.2.2 Parallel Channel Description
The basic Parallel Channel is to support a Centronics type parallel
printer. To do this the following signals are supported.
D0-D7 Data Lines
DS' Data Strobe
BUSY Busy Input
FA' Fault Input

2.2.3 Buffer Box
To allow connection to the XL-series computer, the Expansion Box will
use a buffer box connected to the back of the computer. This Buffer
Box will be able to drive a 3 foot long cable and the Expansion Box.
The power used by the Buffer Box will be supplied by the Expansion Box
on the Reserved Pins of the cable. The connectors used will be the
standard 50 pin P.B.I. connectors.

2.2.4 Power Supply
The Expansion Box power supply will have sufficient output to drive
each slot with .75 Amps at +5 VDC, .1 Amps at +12 VDC, and .1 Amps at
-12 VDC. Table 2 shows max operating current limits of the supply. A
fan might be necessary to provide cooling in the Expansion Box.

+5 VDC 6.75 Amps
+12 VDC 1.0 Amps
-12 VDC 1.0 Amps
Table 2

2.3 Software

2.3.1 Expansion Bus Protocol
The Software handlers and application programs written for use
with/in the Expansion Box must follow standard Protocol defined by "The
Software Implementation of Parallel Device Handlers and Drivers" by
Rick Nordin. A Designers guide to interfacing devices to the PBI and
Expansion Box will also contain the required documentation concerning

the protocol.

2.3.2 I/O Channel Handlers
The handler used in the Expansion Box I/O channel will conform to the
above specifications as well as providing support for the printer as a
standard CIO device call.

2.4 Product Performance
This section will specify the projected performance of the Expansion
Box. The environmental and reliability information that is included is
targeted from the Sweet 16 specification.

2.4.1 Environmental

Operating Environment
Temperature =
Maximum: 45 degrees C
Minimum: 10 degrees C
Humidity =
Maximum: 90% R.H. (Non Condensing)
Minimum: 15% R.H.
Altitude =
Maximum: 3000 Meters (9840 feet) (720 millibars)
Minimum: -60 Meters (-197 feet) below sea level

Non-Operating Environment
Temperature =
Maximum: 60 degrees C
Minimum: -30 degrees C
Humidity =
Maximum: 90% R.H.
Minimum: 0% R.H.
Should condensing occur, unit must be dried off before operation.
Altitude = Same as operating

2.4.2 Endurance Levels

ESD Susceptibility
No product damage or data loss with 10 KV to 20 KV discharge at any
point accessible to the user except the connectors.

Vibration
Operation: .1g +- 10% 5 to 500Hz
Resonance Search: Sine scan 5-100 Hz dwell on resonances
1.0g for 10 minutes.

Transportation: 100 to 300 cycles per minute 2 directions 90
degrees apart, 30 minutes; each frequency to be such as to raise
package from the table 0.06 in., acceleration to be 1.0g (min)
No
Damage should result.

Impact Test: Free fall distance of 24 in. on corner,
edge, and
all 6 faces. No damage should occur to a packed unit.

Random Vibration: 0.04g 2Hz 15 minutes; 10 to 1000Hz 6.3g RMS

Thermal Shock: 10 degrees C for 3 hours power on raise
temperature, 5 degrees per minute to 45 degrees C for 5 hours
power off
drop temperature 5 degrees C per minute to 10 degrees C. Repeat
cycle
5 times no damage

2.4.3 MTBF & MTTR
The targeted MTBF for the Expansion Box is 8000 hours
continuous
power-on at 25 degrees C.
The targeted MTTR for the unit is 5 minutes.

2.4.4 Compliances
UL 114 & UL 94HB
CSA C22.2 No. 154
FCC Docket 20780, Part 15, Subpart J, Class B

Expansion Box Specifications
10/14/83

Below are the changes to the document of the same name dated
7/27/83.

1.2 Assumptions

1.2.1 Product Reasoning
This product is intended to add a strategic marketing dimension
to
the Atari home computer line by providing expansion capability.

1.2.2 Manufacturing
It is assumed that the Expansion Box will be manufactured by
some, as
yet unspecified, overseas vendor.

1.2.3 Strategic Fit
This product is intended to broaden Atari's image as a complete
computer supplier. This is done by offering an expansion path
for
computer users to grow with their systems. A line of option
cards will
allow even the most sophisticated users to advance to an advanced

system.

1.2.4 Product History
As of the date of this document the expansion box has been redefined
as a smart device rather than an extension of the Parallel Interface
Bus. This was done to facilitate third party vendors in the
implementation of option cards. This will also allow for easy
interfacing of the Expansion Box to the current 400/800 installed base.
This choice should create added sales of this device as well as showing
the public Atari will not leave current users unsupported! In addition
to the above features, a RFI problem is also reduced creating a faster
path to bring the product to market.

2.2.2.4 Hardware Device Protocol
The hardware protocol for the Expansion Box is similar to the
Expansion Bus Interface on the computer in that each card is selected
through a common register. There will also be device handlers on each
card in a fixed location of memory. The bus timing is configured so
any type of device can be easily interfaced to the Expansion Box. For
complete interfacing requirements a third party vendor document will be
created with examples of interfacing methods.

2.2.3 Processor Card

2.2.3.1 CPU
The CPU for the Expansion Box will use a 6502 operating at 1 MHz.
This is done for software compatibility with current developmental
tools. The placement of the CPU on a card allows the user to swap
other CPU cards for the 6502 card.

2.2.3.2 ROM
There is provision for 8 K Bytes of monitor Rom on the
processor
card. This ROM can also be disabled by asserting ROMDIS' line on
the
bus. The ROM will be located at E000H-FFFFH.

2.2.3.3 RAM
There is provision for 2 K Bytes of general purpose RAM on the
processor card. The RAM can be disabled by asserting RAMDIS'
line.
This will allow for remapping of page 0 and 1 to swap tasks in
and out
without moving large areas of memory. The RAM will be located at
the
bottom of the memory space.

2.2.3.4 Serial Channel Description
The processor card will have two RS-232C asynchronous serial
channels, capable of simultaneous two way communication. Both
channels
are addressable through the CIO in the operating system of the
Atari
computer. The baud rates for the channels are found in table 1.
Both
channels have independent transmit and receive baud rates. One
of the
two serial ports will be jumperable to allow operation as a SIO
port
for operation with current Atari 400/800 units.

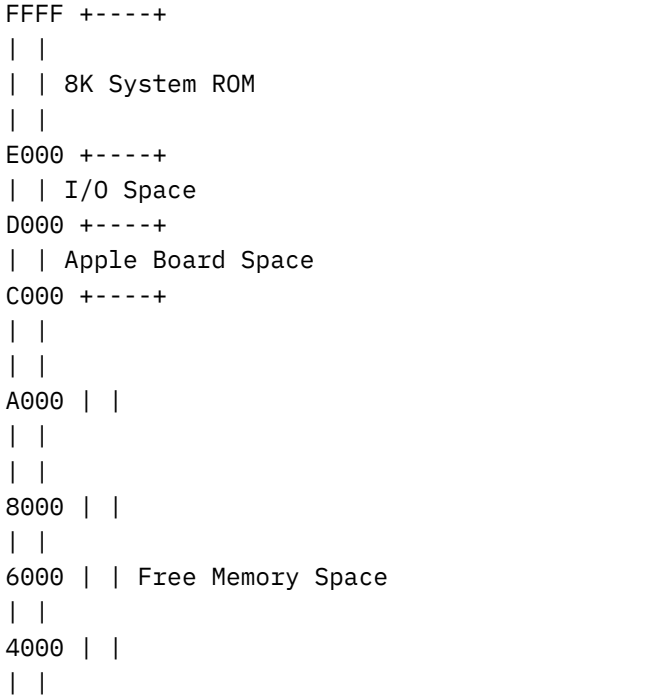
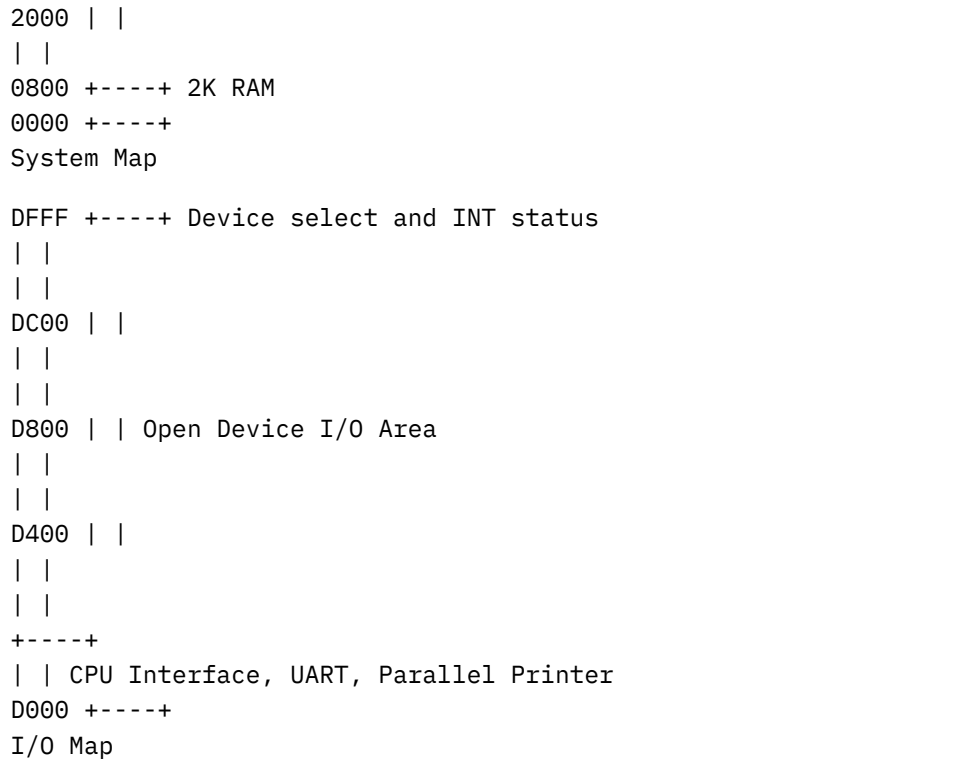
2.2.3.6 Bus Interface
The Bus Interface for the processor card will support the load requirements of the Expansion Bus and follow the protocol of the Bus
timing.

2.2.4 Computer Interface
The Expansion Box will interface with the Atari XL product line through an interface unit connected to the Parallel Expansion Bus. The
interface unit will contain a JULIE FIFO interface chip designed to
allow communications between the XL computers and the Expansion Box.
In addition the interface unit will have a 2K handler rom for the P.B.I. and one LS-TTL decoder chip. Power for the interface unit will
be provided by the expansion box. The Interface will be connected to
the Expansion Box via a 26 conductor double shielded cable. The cable
is to be 3 feet in total length.

2.2.5 Power Supply
Shown below are the total power requirements.
+5 VDC 4.5 Amps
+12 VDC 0.5 Amps
-12 VDC 0.5 Amps
+9 VDC 0.2 Amps unregulated

2.2.6 Memory Map





System Map

I/O Map

3.0 Future Enhancements
The future enhancements include a SIO card to allow operation with the current Atari 400/800 line as well as the option cards stated in the introduction. As of this document no option cards are defined.

4.0 Cost Targets
The targeted standard cost for this unit is $125. This cost will include the processor card with 2 serial channels and the interface to the current XL product line.

5.0 Packaging

5.1 Inner Packing
The inner packing must protect the Expansion Box and accessories from 10 drops from 24 inches on any of six surfaces, three edges radiating from one corner without any internal damage. The inner packing must also protect the Expansion Box and accessories from vibrations of 30 minutes each, 2 directions 90 degrees apart, 100-300 cycles per minute.
Packing must leave the surface 0.06 inches at some time, again

leaving
no damage.

5.2 Display Carton
The display carton should be a six sided 24 pt. SBS (white
chipboard)
folding carton, printed in 4 colors plus PMS877 silver, with UV
or
other abrasion resistance coating. All graphics will be
specified by
Atari.

5.3 Shrink Wrap
The fully packaged product will be shrink wrapped to prevent
damage
and pilferage.

5.4 Shipping Carton
The weight and type of corrugate as well as the number of
products
per shipping carton are to be specified by Atari.

5.5 Carton Contents
* Expansion Box Unit
* Interface Unit for XL computers
* Interface Cable
* 2 RS-232C Cables
* Processor Card
* Owners Manual and Warranty card
* Atari products catalog

5.6 Product Name
The proposed official name is "Atari Expansion Box".

6.0 Manual Requirements
The unit will include an owners manual to be specified by
Atari.

Expansion Box Specifications
5/11/84

Below are the changes to the documents of the same name
dated 7/27/83 and 10/14/83 respectively.

1.0 Introduction
The Expansion Box is an extension device providing support
of expansion cards for the Atari Computer line. This device
provides Atari systems with expansion and enhancement. The
bus enables the consumer to connect a variety of different
devices to the Expansion Box Interface (E.B.I.). Some
devices are listed below.
1) RAM EXPANSION
2) SERIAL/PARALLEL INTERFACE

3) Z-80 PROCESSOR
4) 80-COLUMN VIDEO MONITOR INTERFACE
5) HOBBYIST PROTOTYPING CARD

2.1.1 Appearance
The Expansion Box matches the styling of the current XL product line. The Box has all connections to devices and power in the rear of the box. A flat cable (connected to the
front of the box) connects the Expansion Box to all PBI-equipped computers.

2.1.2 Design Concepts
The Expansion Box requires less than one square foot of table space. The top is easily removable so the user can access the option cards. The Box supports five 9 by 5 inch option cards. To remove the top of the box, the AC adaptor must be unplugged from the box.

2.2.1 Architectural Overview
The expansion box contains a triple-output power supply providing regulated +12 volts and -12 volts and +10 volts unregulated. Also provided is a half-wave rectified AC waveform (for power-line frequency reference only) and +5 volts (for reference only).
The address bus, data bus and control lines are buffered by
the expansion box and bussed to the five edge connectors provided.

2.2.2.1 Connector
The Expansion Box Interface signals are accessible through a 50-pin connector. This connector is an AMP type 2-530843-9. It mates to a standard card edge with gold plated fingers at .100 inch centers.

2.2.2.3.1 D.C. Characteristics
All E.B.I. outputs have the drive capability of 24mA at logic 0 (Iol) and -6mA at logic 1 (Ioh).
All E.B.I. open collector input lines must be able to sink 10mA (min) at .4V (max).
All E.B.I. non-open collecotr input lines except AUDIO must
have the drive capability of 24mA at logic 0 (Iol) and -6mA at logic 1 (Ioh).
All E.B.I. signals except AUDIO will be at standard TTL logic levels.
The AUDIO input line must drive a 4.7KOhm source impedance with a 100mV peak to peak signal.
Each expansion box card should not load any E.B.I. output line with more than three standard TTL loads.

2.2.2.3.2 A.C. Characteristics
All specifications are referenced to the standard 2 MHz
6502 specifications.
The signal PHASE2 is the 6502 clock at the processor.

2.2.2.3.3 Materials Requirements
Contact fingers shall be plated with nickel of the
low-stress type, Class II per federal specification
QQ-N290A.
Nickel plate thickness shall be 100 +/- 25 microinches. The
nickel plating shall be overplated with gold type II (23+
karat), 15 microinches minimum (130-200 knoop hardness) or
10
microinches minimum (201 or over knoop hardness).
Impurities
shall not exceed .1%, not including metallic hardeners.
Roughness shall be less than 50 microinches.

2.2.3 Power Supply
The power supply is comprised of an external AC adaptor
capable of providing 40VA at 9.5 vAC to the Expansion Box
and
an internal rectifier/filter/regulator system. This system
provides:
+10 vDC UNREGULATED (+40% or -15%) at .5A per card slot.
+12 vDC REGULATED (+ or - 4%) at 30mA per card slot.
-12 vDC REGULATED (+ or - 4%) at 30mA per card slot.
+5 VREF REGULATED (+ or - 4%) as a reference only.
AC - a 60 Hz reference only.
Total supply current capacity is five times the per card
slot amounts.
It is recommended that the Expansion Box NOT be operated
with the cover removed for safety reasons and to comply with
radiated emissions standards.

3.0 Notes

3.1 RAM 64KMR
The RAM 64KMR module is designed to be used in the
expansion box. However, it does not completely adhere to
the
E.B.I. protocol since it will allow RAM to be selected in
lieu of the O/S (when used in the "1064 mode".)

3.2 RESERVED MEMORY LOCATIONS
The memory space from D100H to D1AFH is available for use
by most applications. This space should be used by a device
with the device select bit enabling its use. If the device
select bit is not used, there is potential bus conflict
between E.B.D.s. The remainder of the I/O space between
D1B0H and D1FFH is mapped as follows:
D1B0H - D1C7H Speech/Modem/Disk Registers
D1C8H - D1CEH Atari Reserved

D1CFH Alternate Interrupt Register (1450 only)
D1D0H - D1DFH Audio Registers
D1E0H - D1E7H Atari Reserved
D1E8H - D1EFH Parallel/Serial Registers
D1F0H - D1F7H Alternate CPU Registers
D1F8H - D1FDH 80 Column Video Registers
D1FEH RAM Bank Select Register
D1FFH E.B.D. Select/Interrupt Register

PARALLEL BUS INTERFACE SPECIFICATIONS

1.0 Introduction:
The Parallel Bus Interface (PBI) is provided on the S-16 to support
high speed peripherals, communication devices and cartridges.
The objective of the PBI is two-fold:
(1) To provide for future system improvement and expansion of the
S-16.
(2) To provide a simplified interface standard that will envoke
interest from peripheral manufacturers in making peripherals for the
S-16.
The physical connection of the peripherals to the S-16 is conceived
of being through a unit called the "Expansion Box". Roughly, the
"Expansion Box" provides a low cost, easy-to-use multiple access
mechanism to the PBI. It consists of electronics necessary to
implement the interface protocol between the CPU and the Parallel Bus
peripherals. Further details of the Expansion box are TBD.
This document gives a logical definition of the pins on the PBI. It
defines the characteristics of devices that can be supported on the
PBI.
The electrical specifications of the PBI signals and the details of
the PBI protocol are in the S-16 Product Specification.

2.0 THE PARALLEL BUS INTERFACE
The Parallel Bus Interface Connector is a 50 pin connector (See
figure 5.2.9) with the following signals.
PIN 3 through PIN 18 are A0 through A15 respectively. These are the
CPU address lines. The CPU addresses the Parallel Bus Interface
devices using these lines.
PIN 19 through PIN 26 are D0 through D7 respectively. These are the
processor data lines. The CPU transmits and receives data and

control
information from the Parallel Bus Interface devices on these
lines.
PINS 35, 36, and 37: are COMM A, COMM B, and COMM C select
lines
respectively. The Parallel Bus Interface devices lie in the CPU
memory
map. Three 256 byte segments of the CPU memory map are reserved
for
control of the parallel bus devices. COMM A selects the segment
from
D600 to D6FF. COMM B selects the segment from D700 to D7FF.
COMM C
selects the segment from D100 to D1FF. COMM A, COMM B, and COMM
C are
low when active.

PIN 31 is for the Buffered Phase 2 Clock (B02) Output to the
Parallel
Bus Interface devices.
PINS 2, 44, 45, and 46 are not connected.
PIN 29 is the IRQ (Interrupt Request) input from the Parallel
Bus
Interface devices. A PBI device can pull this input low to
invoke the
device handler that services the parallel bus device. This input
is
"open drain".
PIN 32 is the Read/Write (R/W) Output to the Parallel Bus
Interface
devices. This line is "high" for a read cycle. It is low for a
write
cycle.
PIN 34 is the PoWeR ON (PWRON) Input from the Parallel Bus
Interface
devices. This input will allow the implementation of the
"auto-wakeup"
feature in future enhancements of the S-16. This signal is "low"
when
active.
PIN 38 is reserved for future expansion.
PIN 33 is Power on Reset (POR) ouput to the Parallel Bus
Interface
devices. This output resets any device so designed on power up
and
when the RESET key on the S-16 keyboard is hit.
PIN 49 is audio in and out signal from/to the Parallel Bus
devices.
This line is connected directly to the audio summation network of
the

S-16. This audio signal is a 1 volt peak to peak.
PIN 39 is the MODSEN (Module Sense) input from the Parallel Bus Interface Modules. This input is pulled low whenever a Parallel Bus
Interface module is connected to the PBI.
PINS 47 and 48 are GROUND.
PIN 28 is External Decoder Enable (EXTENB) Output. This output goes
high when an address on the CPU bus is an allowed address for a PBI
device. The S-16 generates the EXTENB signal for all segments of the
CPU memory map except:
(a) The Active segments of the O.S. ROM. Any disabled segments of
the O.S. ROM generate the EXTENB signal when addressed.
(b) The region occupied by the internal cartridge (if present).
PIN 27 is the External Select (EXTSEL) Input. This input is generated by the (external) decoder resident in the PBI device. This
signal should go low whenever the EXTENB is enabled and the PBI device
uses the address generated on the CPU Bus. This input is used to disable the S-16 decoder for the duration of the current bus cycle.

PIN 30 is the RDY input to the S-16. A slow PBI device can extend
the CPU bus cycle by pulling this line low when it is addressed.
PIN 40 is the Refresh (REF) output. This output may be used for the
refresh timing of volitile memories connected to the PBI.
PIN 1 and PIN 50 are shield grounds.
PIN 41 is Auto-run Present (ARP) pin. This pin goes high whenever an
auto-run cartridge is present at the PBI. All auto-run cartridges
should pull this line to the "high" state internally.
PIN 42 is Auto-run Disable (ARD) pin. This pin goes high whenever a
cartridge is present in the internal cartridge slot. The Auto-run
cartridge should disable their decoder whenever this line is in the
"high" state.
PIN 43 is Math Pak Disable (MPD) input from the PBI devices. This
input is pulled to the "low" state whenever a Parallel Bus Peripheral

is selected by the CPU (the enable bit in location D1FDH is set).

FIGURE 5.2.9 PBI Connector

3.0 Parallel Bus Devices
The Parallel bus will support 3 types of devices:

3.1 Auto-Run Cartridges:
These cartridges are functionally identical to those that plug into
the cartridge slot of the S-16 except that they can be up to 32K Bytes
in size (in 4K Byte increments). The top address for these cartridges
must be BFFFH and they must assert the "AUTO-RUN PRESENT" line when
inserted into the expansion box. The auto-run cartridges work under
the following constraints:
(a) Only one such cartridge will work at a time.
(b) If a cartridge is present in the internal cartridge slot, the
auto-run cartridge is ignored by the S-16.
(c) If no cartridge is present in the internal cartridge slot

the
auto-run cartridges operate in a manner identical to the
cartridge slot
cartridges. No additional handlers or O.S. changes are needed.
(d) If an auto-run cartridge is present in the expansion slot,
any
"External Application" cartridges (See Sec. 3.3) plugged into the
Expansion box will be disabled.
(e) The Auto-run cartridges conform to the EXTSEL/EXTENB
protocol
(have their own decoder).
(f) The Auto-run cartridges must disable their decoder if the
"Auto-run Disable" output of the S-16 is active.

3.2 Parallel Bus Peripherals (PBPs)
The PBPs have the following characteristics:
(a) They interface to the S-16 through a well defined
handler/O.S.
interface. The code for this interface is resident in CPU memory
location D600H to D7FFH (COMM A & COMM B areas). The ROM
containing
this code is physically located on the expansion box.
The S-16 O.S. can support up to 8 PBPs.
(b) Each PBP has a unique handler that resides in the CPU
memory
space at locations D800H to DFFFH. The ROM(s) containing the
code for
these handlers are physically resident on the respective
peripheral
boards (The memory space occupied by the handlers actually
contains the
Math-pak within the S-16. The Math-pak is disabled whenever any
PBP is
enabled. (See (c) below).

(c) Locations D1FDH thru D1FFH (in COMM C space) in the CPU
memory
map are reserved for passing control information between the S-16
and
the PBPs.
Location D1FDH is Slot-Select location with the following bit
assignments:
7 6 5 4 3 2 1 0

| X | X | X | X | E | I | I | I |

E = Enable bit. The S-16 sets this bit to logic 1 whenever the
O.S.
wishes to communicate with a device in the slot whose I.D. is
specified
by III. When the Enable bit is set to logic 1 the S-16 disables

the
Math-pak and maps the region from D800H to DFFFH to the expansion
box.
The Enable bit is latched in the expansion box and it must be set
to
logic "0" to disable the PBPs.
III = SLOT I.D. The S-16 O.S. can support a maximum of 8 PBPs.
The
slot I.D. is latched in the expansion box and a slot remains
selected
till a different slot I.D. is generated or the enable bit is set
to
logic 0.
X = Don't Care.
The Slot I.D. decoder is physically located on the expansion
box.
location D1FEH is Interrupt vector location with the following
bit
assignments:
7 6 5 4 3 2 1 0

| X | X | X | X | IR | I | I | I |

IR = Interrupt Request. This bit, when logic 1, indicates to
the
S-16 O.S. that a device in the Expansion box has interrupted. When
this bit is logic 0, no device in the expansion box has
interrupt.
III = is the slot I.D. of the highest priority slot that
generates
the interrupt. The S-16 O.S. assumes that the slots have fixed
priority. The slot with an I.D. of 7 has the highest priority.
X = Don't Care.
The priority encoder is physically located on the expansion
box.
Location D1FFH is un-encoded interrupt location with the
following bit
assignments:
7 6 5 4 3 2 1 0

| I7 | I6 | I5 | I4 | I3 | I2 | I1 | I0 |

IX (X = 0 to 7): This bit is set to logic 1 whenever a device
in
slot X generates an interrupt. This bit is cleared by the
interrupt
servicing routine for the device in slot X.
The un-encoded interrupt location allows an application program
to

mask the interrupts from the specific slots. With the masking arrangement, an application program may ignore the fixed priority by
slots and implement its own priority scheme.
(d) A peripheral handler may respond to address in the region D800H-DFFFH only when the slot in which it resides is selected. Location D800H contains the device I.D. of a PBP. If a slot that contains no peripheral is selected, address D800H should return FFH as
data.
The peripheral handlers must conform to the EXTSEL/EXTENB protocol as
specified in the S-16 Product Specifications.
(e) A peripheral may respond to address in the region D100H to D1FCH
only when the slot in which it resides is selected.
(f) The PBPs will have priority over the SIO peripheral when they are
addressed generically.
(g) The data between the S-16 and a PBP is passed under control of
the peripheral handler for the PBPs.
(h) The PBPs will work if an auto-run cartridge or an internal cartridge is present in the system.

3.3 "External Application" Cartridges:
The External Application Cartridge are a generalization of the auto-run cartridges and the PBPs. They have the following characteristics:
(a) An "External Applications" Cartridge (EAC) can reside at any or
all of the address in the region 4000H to BFFFH. They may respond to
these addresses only when "opened".
(b) The EACs must be "opened" by the S-16 through the slot select
location in the same way as the PBPs.
(c) The EACs must conform to the EXTENB/EXTSEL protocol.
(d) The EACs must have a "handler" (resident in locations D800H to
DFFFH) that controls their operation. The EACs must conform to conditions (d) and (e) of section 3.2 above.
(e) The EACs will work only if no auto-run cartridge is enabled in
the expansion box. The EACs must input the AUTO-RUN DISABLE line to
ascertain that the Auto-run cartridge is disabled before asserting
themselves on the Expansion Bus.

(f) The EACs may work even if a cartridge is present in the internal
cartridge slot.

4.0 assumptions
(a) The above description of the PBI devices assumes that there is a
mechanism in the Expansion Box that prevents more than one auto-run
cartridge from being turned on at a time on the PBI. This mechanism
may be a daisy chain priority scheme by slots or the auto-run
cartridges may be specified to work in only one of the 8 possible
slots.
(b) The above description also assumes that there is a power shut-off
interlock switch on the internal cartridge door.

4602. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-23 00:00:00 UTC
From: Technoid Mutant <Technoid@cheta.net>
Message-ID: <37477E18.724D7DCD@cheta.net>
Source record: 52218

The program is called "config" and was written for 'density-dumb' drives and included in the DOSXL kit. It is a binary executeable.

The other is called 'drivezap' at least by me and is a basic/ml program to manually modify the control block. Though you can configure for all kinds of wierd formats, only the ones supported by the drive will work:

ss/sd-ds/sd-35,40, 77, and 80 track.

77 track drives were double-density with 26 sectors per track yielding 1.0mb on the Atari.

Here is the readme on CONFIG.COM:

" This command is intended for use with the PERCOM or other
"non-intelligent" disk drives.
These drives do not switch density or recognize double sided diskettes
automatically when a new disk is inserted in the drive.

In order to use these drives, simply type the command "CONFIG". This will
patch into the SIO of SpartaDOS and detect errors when trying to read from
the drive. If an error occrs, the drive is then automatically configured to
the correct density.

This should also correct any problems you may have using 80 track drives
with the ATR 8000 interface."

End Quote

I think this file may have come in the original 1.1 (Brown paper-bag
packaged) version of Spartados. Maybe with the Spartados Construction Kit
as well? I don't THINK this program is spartados-specific as I recall it
shipping with dosxl and know it works with dosxl. As Dosxl is just a
replacement Dup.sys (and not bad for all that), it should work well with
Ataridos and clones.

well... as i am still coding on 8bit for some time i suggest the
following...

i use my pentium-notebook and win800 a good atari 8bit-emulator which can
handle sound
and atr/xfd/dcm/harddisk-partitions... and xe-rambank-handling

assembler:

i would prefer our taquart-xasm-package for msdos...

check it out!

the atari-emulator has a build-in-debugger...

Vintage Atari hardware/software bundle for auction on eBay. Includes...

Atari 800 computer with manual, power supply, Koala Pad, various memory expansion modules installed.

SWP Microcomputer Products ATR 8000 Atari interface unit, doubles as 64k CP/M computer. (!) Includes one 5.25" floppy drive, manuals, disks, various cables, book "Mastering CP/M" by Alan R. Miller (SYBEX, 1983)

Dozens of assorted 5.25" floppies. Assorted software manuals.

Check it out at...

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=104884889

Auction ends: 05/26/99, 02:02:54 PDT

Hi Lance-
I knew that Atari made a very good version
of BattleZone for the C64, but I never knew
that they made it for the VIC. BattleZone
was interesting for the Atari, since it was
evidently planned to be released early -
maybe 1983, but for whatever variety of
reasons, didn't make it out until they did
the XE game machine and released a bunch
of new/converted cartridges. Unlike many
of the prototype carts, though, I never heard
of any "pre-release" versions in circulation.

Message-ID: <374812D6.DC43DA11@cheta.net>
Source record: 52224

I just checked out my dosxl manual and it did indeed ship with A config command. I say A config command as dosxl's and the one I described in my previos message are different. The DOSXL Config command is a manual utility which is not memory resident.

If someone can tell me an easy way to browse my 16mb spartados format .ATR images so I can pull programs to attach, I will include them here in my messages if they are not too large (sic).

I can run sparta off these .atr drives useing xformer, but don't know an easy way to get information 'out' of them and 'into' my pc's hard disk.

4609. Re: Percom Disk Drives ?

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-23 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <19990523112449.23853.00002829@ng25.aol.com>
Source record: 52225

I've been playing with the Percom a little.
The Percom that I bought from Bob Klaas
is a AT88-SPD. It has a Tandon full-height
DS/DD drive in it. It works
well, and it reads and writes
fine. It has a 1795 FDC and the usual 6809
CPU. It has a full length board,
and the Rom version is 1.21, dated 4-84.
This seems pretty late in the game for Percom.
Most Rom versions that I have read about
were from 1983. Anyone seen any later versions for the AT series than this?
Does anyone have both an AT (DD) like
this and an RFD series, and if you have both, can you tell any differences in
their
performance? Hopefully, Percom made improvements over time. Oh, yes, I have
to mention the power supply transformer - must weigh close to 5 lbs. by itself.
It's BIG.

This drive has only one unusual thing that I have found, so far. If I format
a disk in single density on another drive, the Percom reads it very fast -
faster (subjectively)
than any other stock (non-Ultra Speed, no track buffering- type) drive I own.
But if I format a disk on the Percom, and then read it back, it "stutters".
Just like it's missing sectors and having
to wait for the disk to spin around. It is very consistent, not like it is
unable to read the sector, just missing it at the appropriate time on the disk
rotation. In DD, it does something similar, but not quite the same.
Naturally, in DD, it the SIO pulses are "slower" (although reading more bytes).
But it reads about 6 sectors in a row, then pauses for maybe a couple of
rotations, then reads
6 in a row, etc. It's like it reads directly as many as it can until it fills
it's buffer, then flushes the buffer, then goes back for another group. This
seems plausible, although there may be something else happening.
I certainly have more experimenting to do, but it is a very interesting drive.

Unlike the my AT88-S1 (single density drive),
this doesn't have any visible place to connect
add-on drives. The printer port has a 34 pin
connector, so maybe they can be connected there. (?) Unfortunately, my manual
is only for the AT88-S1. The drive connector itself poses a problem for adding
drives. It is a
34 trace, card edge connector, but with a
very short cable, and it is attached to the PCB with an IDC, which I am very
reluctant to remove, for fear of pulling out the "teeth" in the IDC which is
soldered to the PCB.

My best bet is to find a male-male card edge connector. They used to be very common, but hard to find anymore.
I can't seem to find any way to alter the drive speed from 300. I did want to try slowing it down a little to see if it would affect the "stuttering" in S/D. There is a POT
on the drive's motor control board that looks like it should change the speed, but it seems to have no effect. Has anyone found a way to vary the speed?
Larry

You are in an empty room with "Graham C Thornton"
<graham.thornton@ln.ssw.abbott.com>. There's a rock in the middle with
"Y2" written on. A hollow voice says:

>to find somebody who actually wants that aerobic step video or
>Barry Manilow LP. I read somewhere the car boot sale has over taken
>church as the no.1 reason the British public get out of bed on a
>Sunday morning - which is probably why it stands zero chance of
>ever working here in the MidWest :(

You're right about the same time same place, and as far as I'm
concerned you're right about the getting out of bed, but the sellers
change a lot. There's always the core of the van sellers who are there
every week (and who know me by now since I'm always there looking at
ANY dusty old bit of electronics they've found that week) but
sometimes there's the gem of a householder who just wants to junk the
contents of their loft, and that's where I step in. The last 600XL I
got was from just a family, and it's in such good nick I've just GOT
to get it working :o)

>Often the bad chip is *alot* hotter than the others. That's how
>I fixed my TI-99/4A when it blew the video chip a couple of years
>back.

Fortunately my TI-99/4A worked when I got it out of the box.......and
someone at work even has game cartridges for the thing somewhere up in
HIS loft........

As far as I am aware, there were not percom drives produced with a printer port. The card edge connection you are looking at IS the slave drive connector. Remove the terminator chip from the drive mech inside the Percom enclosure, connect a cable to the card edge connector and connect a terminated drive to the end of this cable.

Hello Bob! I have two of these printers,but no dos.
Could you please send me the printer control sequences
from the manual so I can write a printer driver for it.
I'll send you a copy when I do. BTW..you can use the
Radio Shack LP-VII ribbon for a replacement. :)
Thanks.....Ed

4616. FS: USA: OSS Basic XL Cartridge and Manual_

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-24 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7ibn79$cp41@news.ajou.ac.kr>
Source record: 52139

Hi Folks,

I have for sale a OSS Basic XL Cartridge and Original Manual.
The Manual is the NoteBook type which contains the Basic XL
Reference manual and 30 Days to Understanding Basic XL.
There is over 300 pages in the manual.

The first person to e-mail me and offer $25.00 plus $3.00
shipping gets it.

This item is only for sale in the USA/North America. I cannot
take any overseas offers on this item.

If you are seriously interested in purchasing then e-mail me
at the address below.

Thanks and Good Luck,
phantomm@kih.net

4617. FS: USA: MicroSoft Basic II Cartridge and Manual

That was about the same time I was spending $500 for a 810 disk drive.
If I put an 810 for sale at $500 I would be stoned.. I don't think what
it was worth back then has any bearing now.

we found this in our warehouse with a bunch of other commodore
software,its mint,i do not remember it either,but i have one,its a vic20
cart,which i think has only 3k,i wonder what it looks like on the
vic20,would it be as good as the 2600 version?

Hey! - the VIC-20 had 5k (FIVE!) kilobytes of RAM. It might just be 2K
to you, but it's a big deal to a VIC-20 :-)

The Atari carts were either 8K or 16K ROM carts (I think Battlezone was
a 16K cart) and were mostly very good implementations of the classic
Atari games - Robotron 2084 in particular was really cool on the VIC,
although Pac-Man was total crap.

Havn't seen a 2600 is such a long time I cannot compare the games, but
the VIC had very limited graphics (176*184 in 16 colours, no bitmap
mode or sprites but those could be emulated in software, and rather
limited sound. I doubt many Atari owners would be impressed, but
for those of us who started out with with them, they still occupy
a special place - and Hellgate, Matrix or Jelly Monsters are still
awesome games today!)

Good luch with your auction.

Graham

What is the upper bps limit that an 850 will support? You should be able
to connect with a newer modem at speeds as low as 300 baud, but if you
just want to use it for file conversion, the other solutions recommended
would probably be better.
I am curious about a speed limit on the 850, though, if anyone knows.
Thanks,
Trevor

You need a parallel or serial interface for it. You can then use a
standard PC cable to connect to your PC and use a terminal program on
both ends. I've seen both type of interfaces on Ebay
(http://www.ebay.com) lately.

An 850 interface is advertised to go to 9600 bps. IIRC, there's a program
or command in the manual that will take it to 19.2Kbps, but that would not
include hardware control.

> cable.

While I have never seen one myself, it has been posted a few times that
the +P models do contain a printer interface.

As for the slave drive connector on the percom, here is what you do
with it.

Remove the header cable from the socket on the main board, unscrew the
mounts that hold the edge connector on, then cut the big ground wire.

throw in trash.

Get a straight-through 34-pin floppy cable, and connect whatever type of
drive you want. It will work fine for 5.25" and 3.5" drives as high
as 720k, depending on the controller and drive model, as discussed here
perviously.

Working with external drives and power supplies is a pain in the *ss,
expecially when you can easily fit 4 3.5" drives inside the percom case,
and power them off its power supply. Not to mention all the edge->idc
adapters and other nonsense you would have to get involved with.

I ran 4 720k drives off the big tansformer in the RFD series drives for
years without it so much as overheating. 4 modern 3.5" drives hardly
draw the current of the original FH 5.25" mech.

One tip, if you your RFD series drive has those funky regulator sockets
in it, remove them and solder in new regulators, the drive will last
much longer and perform better.

The 850 interface will do 9600 bps. There is a setting for 19.2k in
the driver, but it actually is 9600 as well, regardless of what your
terminal program tells you.

If I'm using a null modem cable, I won't need the modem, right?

I'll see what older goodies like pics, and such I can dredge back up..

I compiled MANY of the basic games from compute, motorcycle maze rider, and such, as well as doing a compiler version of escape from epsilon, and Galaxy defender, the space zap clone by amulet games (I did the graphics for them)

I also had piles of menu based disks I want to transfer over, since some of those titles haven't shown up anywhere..

be nice to save some of them...

While I think a cartridge version might be more durable, I think producing cartridges for the old Atari days are long past.. maybe a web page completely commented, or something along those lines, but there's just not alot of real interest anymore..

If it's a labor of love, I'd say do it! If you're hopping to recoup the costs on sales, I'd say forget it...

Just my .02....

From: spearsk@mc-mc.com
Message-ID: <7ibdh1$q8f$1@nnrp1.deja.com>
Source record: 52233

Having just got a new motherboard for my 1200XL, I tried hooking it up to a TV that I hadn't previously used for computer display. Having done this, I was shocked at how bad the picture really is on this TV! It jogged my memory about a program sold through APX a long time ago called "TV Color Adjuster" or something like that. Does anybody have this? Is it as useful as it sounds? How would I go about getting a copy of this, with the docs?

As an aside, is the RF modulator circuit accurate enough in the Atari to make precise TV adjustments? Is one model of the 8-bit better than others for doing this?

>As far as I am aware, there were not percom >drives produced with a printer port.

Yep, there was. The last of the "AT" series was the AT88-SPD (PrinterDouble Density). Advertised in both Antic and Compute! The original (I think) cable was attached to a 34 PIN connector on the side of the board extension, complete with the Centronics male connector. No Jumpers on this model unlike the AT88-S1. But now that you mention it, It looks like I can still connect at the end of the board, although I wanted to do it internally, if possible.

Source record: 52235

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 05/24/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari 8-bit computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection list for this system is currently on-line!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 2.50 3-D Tic-Tac-Toe
$ 2.50 Alphabet Zoo [Spinnaker] -- no label
$ 2.50 Atariwriter
$ 2.50 BASIC -- for use with Atari 400 and Atari 800
$ 2.50 Centipede

$ 2.50 Dig Dug
$ 2.50 E.T. Phone Home!

$ 4.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive does not include the power supply, or Molex connector cable.

NOTE: Light comes on, and drive tries to read disk, but drive will not boot up. Sold as non-working item, possibly repairable, for parts only!

$ 3.00

*****

LOT #2

ATARI 1025 PRINTER, with built-in power cord, and manual.

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$ 8.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in

business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current
mailto:mcurrent@carleton.edu
http://www.faqs.org/faqs/atari-8-bit/faq/

Atari 8-Bit Computers: Vendors and Developers / Michael Current

As some may know, I'm the author of an Atari program "Qb", recently rediscovered (see http://homepages.ihug.co.nz/~aaronat/qb.html). I'm currently considering the possibility of converting this program to cartridge format, and producing commented source-code listings.

To this end (although I have the source code on disk), I'd like to disassemble the .OBJ file and produce a brand-new source code listing. Simply because I was forced (due to disk space limitations) to use NO comments, single-letter labels, and single-spaces when I originally wrote the code. Anything that could save a byte of source code space was done. So, it made for a very hard to read program (but then again, I kept it all in my head anyway, as we all did back then).

So, does anybody in the group have any recommendations for a disassembler?

Problems I expect to face (converting to cartridge) are the large size of the program, the possibly hardwired run-address, and (gasp) the likelyhood that I used self-modifying code. Well, it was 1984... self modifying code was "in". ;) There might also be PAL/NTSC issues which I could resolve in cart format.

Anyone wanting a cartridge and commented source code listing (obligation-free, I'm just gathering numbers) please drop me an email at adavie@mad.scientist.com

Thanks
A

Hi,

>Are you sure ?

He's right, european VIC-20s did in fact have 5K of RAM in them. Though ISTR
that only 3K or so was available to BASIC.

>I picked up a Trak AT-D2 drive at a local swap'n'shop but it didn't
>have a power supply with it, does anyone know what voltage it takes.

I had the same situation. I run mine with
a stock Atari 9V AC (31VA) power supply
with no problems. I have a TRAK
manual, but it says nothing of the P.S.
The only "unusual" drive I've ever seen
is the Indus @ 11.5 V *DC*.

Hi Steve-
>Remove the header cable from the socket on the main board, unscrew the
> mounts that hold the edge connector on, then cut the big ground wire.
>throw in trash.

I'd love to do that, but alas, no socket. The
IDC is soldered directly to the board. When
they took $200 out of the RFD drive to get to
the AT (DD), I think a few things got "cost reduced." I don't have an RFD to
compare
it to, but I've seen the type of connector that
I think you are referring to, and this isn't
that kind.

Hi everybody
How many of you are old atari classic subscribers like me?
I was too a member of the Old Hackers (NY).
My Atari 800XL is now dead and I upgraded from PC two years ago.
I am happy to see the 8bits community is still alive.
What are the true emulator now that have real capacity to work?
PC Xformer is still on the market?

4645. ATR -> XFD

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-25 00:00:00 UTC
From: Jindrich Kubec <kubecj@asw.cz>
Message-ID: <374A5BE4.C46C867F@asw.cz>
Source record: 52161

Hello!

How was XFD defined? I'm asking about the situation when sector size is
$100. Are first three sectors of XFD $100 or $80 long? (First three
sectors of ATR are always $80 long).

I always thought that DD XFD image should be 720*256 = 184320 bytes
long.
DD ATR image should be (720-3)*256+384+16 = 183952 bytes long.

Atari made a few of games for VIC-20 in 83-84.
Battlezone was released '83 , 16Kb version (extended memory needful) and
came under No. RX8547.

If anybody want to find more about Atari games for VIC-20 try to check

http://members.aol.com/wshrake/index.htm

maybe the best pages dedicated to VIC-20......

(size of dbl dens atr and xfd images)
Both atr and xfd have 128 bytes for first three sectors, then
256 for the rest. However, an actual DD disk has 256 byte
sectors for sectors 1 to 3.

Hi,

>I've owned 3 800XL's, the first one was back in ummm, 84
>with the second one back in 89, and the 3rd which I recently
>acquired, all of them have been socketed...

I'm not 100% sure when I got my first 800XL, it would've been '85(ish) -
definitely no earlier than that.

It was fully soldered, I remember that because at the time I was into
re-writing the OS and ended up going to a lot of trouble to desolder the OS and
BASIC ROMs (BASIC became GALAXIAN). The other chips were also soldered, I ended
up having to solder a second 6821 on top of the existing one (to add my
homebrew printer and serial interfaces) since I couldn't desolder the existing
one to replace it with a custom PCB.

I'll have to dig out my others and find out when they were manufactured.

>800XL.

I suspect that's the key....POST Tramiel.

Not only did they start putting the cheaper 600XL keyboards on to save dosh but by the look of it they saved money by not socketing them (it's amazing how much money a simple change like that can save).

Sorry to intrude, but sectors 1 thru 3 are ALWAYS 128 bytes!
On DD disks sectors 4 thru xxxx are 256 byte sectors.
Included in XDIR on my webpage is a pc assembler source
containing documentation about this matter, and can be downloaded from:
www.xs4all.nl/~stack/atarixle.html

The Traks all use the same power supplies as the Atari 810 disk drives.
You can pick one up from B&C Atari sales at www.myatari.com or Best
Electronics at www.best-electronics-ca.com, I'm not sure, but you can
also check Video 61 Atari sale at www.atarisales.com

4656. Atari 1400XL for auction on e-bay

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-25 00:00:00 UTC
From: Dan Toms <dtoms@essd.sri.com>
Message-ID: <374B0B2B.2044E9CB@essd.sri.com>
Source record: 52172

See

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=109021565

Atari 1400Xl For Sale.

This is your chance to own a rare piece of Atari
vaporware. Its called vaporware because it never
was officially for sale.

This item is rarely seen for sale, because no one
wants to give them up. I don't either, but I
need the money :).

This model comes in a genuine 1400XL case,
it does not have a 1400XL name plate.

The internal 300K baud modem has not been tested
(I don't know what software to use with it)

The voice synthesizer works great.

The PBI interface is untested(again, nothing to test with)

Everything else works great.

A 256K memory upgrade has been applied to it, raising
the total ram to 320K. It is the piggy back method.
The wiring is clean and heat-shrink wrapped. The
buyer could easily desolder the connections, if desired.

This unit comes with a modified XT type of power supply.
The 1400XL power supplies used different voltages than
the other XL lines and I was unable ever to find one,
so I built this. It works, it is not pretty.

The motherboard has 1400 printed in the lower right corner.
The back of the motherboard reads:

C061742 REV X3
ATARI COPYRIGHT 1983

PICTURES:

These pictures are rather low quality, sorry.

The top of the case, 28K, is <a
href="www.ecst.csuchico.edu/~dtoms/atari/outside.jpg
"> here

A pic of the mainboard, 59K, is <a
href="www.ecst.csuchico.edu/~dtoms/atari/inside.jpg>
" here

The blue wires are from the ram upgrade. You can see 1400 on the
mb in the lower right corner.

EXTRAS:

I am also throwing in some interesting cartridges.

1. Answering Service Cartridge 12/83

This cartridge has a handwritten label. When booted it
prints:

1400 PHONE ANSWERING SERVICE

and then sits there.

I assume it was some type of phone answering service ;)
I'm not sure what else it is supposed to do. I can't
get it to do anything.

2. Answering Service Cartridge

This one has a type written label. It doesn't boot
at all.

3. EXERDI 0.0

810 Disk Board Compatibility Test
COPYRIGHT ATARI 1981 VERSION R00.00

Not sure what this does. I don't have a 810 anymore.

4. ATARI USER DIAGNOSTIC

This doesn't boot at all.

WHAT YOU GET:

You get the 1400XL, the power supply, the cartridges, the ram-upgrade
instructions, the power supply pinouts, and a synthetic cover(made for
1200XL)

I believe 9600bps. Perhaps more but that is the rated safe speed I
think.

>PC Xformer is still on the market?

Get Atari800Win. It's the best. If you insist on running a DOS emu,
then Atari800 or XL-it! are both great.

you know that i get tired of everyone comparing atari dealers to
o'shea,they are a liquidtion company that was never a real atari
dealer,they are not there to support the community,they do not even know
what this stuff is,they got it for free from atari,then way undercut
actuall dealers who paid much more for the stuff then they did(yes free
is a distinct advantage)and everyone expects us to match the price,but
what else do they carry?if you need a power supply or a joystick,or
service,are they there for you?
thanks,
lance

I'm not 100% sure about this, but I think it is the controller on the
disk drive that limits the first 3 sectors to 128 bytes rather than
the OS. That is, if it receives a read or write of sectors 1-3 it
will only send/expect 128 bytes of data on the SIO line. Any other
number and it will give an error. 'Course there's still 256 bytes in
the sector, just that an Atari drive won't actually send them to the computer.

I think that the original Atari OS was written to always try to read
128 bytes from sectors 1-3 on boot-up. Then control would be
transfered to the code just read in from sectors 1-3 and that would
continue loading in the rest of the sectors in the correct density.
So to be able to boot from a DD disk, the drive would have to return 128
bytes when sectors 1-3 were requested, any other value would give the
OS problems and it would be unable to boot from a DD disk.

I also seem to remember reading somewhere (maybe in the MyDOS docs)
that there is a bit in the configuration block for some drives to set
the first 3 sectors to be 128 or 256 bytes.

I would be amazed if the long term result was anything though. Figure a single chip failure and the cost of repair for desoldering vs pulling would be kind of high for warranty work.

I heard rumors of literally rooms full of broken XEs at Atari that were returned under warranty. They just kind of implied they had a technical service staff that would fix your computer, but all they did was toss it in a room and ship you an new one.

4670. FS: Atari 8-bit collection UPDATE!

The response to my Atari 8-bit sale has been *overwhelming*! I've sent you people into a feeding frenzy! These things are going FAST! I'm updating my page constantly with all the items that have been sold. If you see some carts that you want, don't wait!

I'm selling my *entire* Atari 8-Bit Computer collection. It consists of well over 150 different carts, all in beautiful condition, an Atari 800 & 800XL, plus a few other odds and ends. I'm taking offers on everything over the next 2 weeks. After that, anything left is going on eBay. I have *many* rare carts, so if you're interested in any of them, make me a fair offer. You can view the entire list here:

(I say there are 256 bytes on a DD Atari disk, Bo Scheurers
says there ain't, and he's got pc assembler to prove it.)
I rise to the dispute.
If pushed hard enough, I'll write you a letter in the other
128 bytes of an Atari DD disk, on sectors 1 to 3, and challenge
you to read my letter.
(Hint, you could use ANADISK on the pc, which reads, writes,
edits sectors 1 to 3 just fine. Reports 256 bytes per sector, etc.)
I'm positive there are 256 bytes in sector 1 to 3, but am
having a hard time figuring how to prove it.
I'm a software man. Somebody like Rick Cortese could tell you
that the controller in a us dbl 1050, Rana, Indus, or any
dbl dens Atari-8bit drive only knows the density it is in,
single, double or that funky 1050 enhanced thingy. The
controller doesn't care if it is sector 1 or sector 360,
it is still 256 bytes per sector. I went on and on, about
what Rick Cortese would say, or Bob Woolley, about what
the drive hardware 'knows' and does.
The A8 OS, tho will read the first three sectors and only
buffer 128 bytes, or maybe buffer all 256, but only use
128.
The longer my post, the more I'm struggling here. So I'll
quit and go look at Bo's pc assembler. Is that for the
A86 assembler by Eric Isaacson?

Actually, I think it was the guy from Video 61 (thanks again for that Solitaire cartridge!) who said that Atari 8-bitters with Internet/Web access aren't the only people who use Atari 8-bits. And some of us enjoy the instant-loading speeds of cartridges. :)

(I looked at Bo S.s pc assembler, this is about how many bytes
are actually on a Atari-8bit dbl dens disk in sectors 1 2 3.)
I've spent hours. I'm afraid I didn't get an answer from
quick perusal of Bo's pc XDIR code.
I am unable to read or write to the last 128 bytes of a
A8 formatted dbl dens disk, using the A8.
I can read and write to those bytes using the A8 dbl
dens disk in my pc and using ANADISK.
ANADISK proves the bytes are there, even tho the A8
can't see them. A part of the A8 OS, I suspect.
So, the extra 128 bytes are on the A8 formatted dbl dens
disk, just the A8 can't do anything with them.

This is like arguing about how much data is stored on a track. If you
can only get a drive OS to store 128 bytes of user data in sectors 1-3,
then the effective storage capacity of those sectors is 128 bytes.

If you would like to know how much data is stored on each track, including
all the soft sector formatting data, crc's, etc, its much more
than 4608 (18 * 256) bytes, but it means nothing to the Atari.

The actual disk format is not important, in fact with the Atari's
device independant I/O, it need not even be a real disk drive. :)

I'm selling my *entire* Atari 8-Bit Computer collection. It consists of well over 150 different carts, all in beautiful condition, an Atari 800 & 800XL, plus a few other odds and ends. I'm taking offers on everything over the next 2 weeks. After that, anything left is going on eBay. I have *many* rare carts, so if you're interested in any of them, make me a fair offer. You can view the entire list here:

http://members.aol.com/swozniak/page1.html

Here are some of the highlights from my (all cartridge) collection:

Bounty Bob Strikes Back
Orc Attack
Powerstar
Fort Apocalypse
Boulder Dash
Crystal Castles
Track & Field w/ controller
XE Demo Cartridge
In-Store Demo Cartridge

Thanks for looking!

I think I paid close to $100 to get a little OSS orange cartridge, 3 ring binder manual and the toolkit in 1985. I've been fascinated by ACTION! since first reading about it in Analog in Feb. 84. Truly one of the great software products of the 8 bit era.

Also up until last year you could buy a NEW (ICD black) ACTION! cart & toolkit for about $50 from B&C Comptervison in North California. I believe their site went down last December. At the time they carried stock on the BASIC XL, XE and MAC 65 at the time too.

Maybe they're still around, somewhere.

Hi Dan,

The Answering System software was actually a very bold and unique idea back in 1983/84. The computer would actually act as an answering machine using the cartridge. The details were sketchy in several of the internal documents, however I have spoken with a few people involved on the 1400XL project and it was a great idea, however the software from what I'm told was never completed.

Once the auction is over, I'd like to talk with the winner and see about borrowing the cartridge to make a copy of it, I'd be willing to make a copy of the Atari 1400XL Telecommunicator cartridge for the winner in return.

Sorry I'm a little late reading these messages, I've been away from the machine for a while, hope this helps.

I'm just reading this thread but as I said in a posting a company called B&C Computervison in Northern California WAS selling 8 bit Atari stuff up until last year, including ACTION and the rest of the OSS series. If you can find them you'll find a cart, and likely anything else you need.

The last time I saw their site it said they were moving, but here's the last address/phone I have for them. You see 2 years ago I needed an ACTION cart, and picked one up via these folks.

B&C ComputerVisons
1725 De LA Cruz #7
Santa Clara, Ca. 95050-3011
408-986-9960

Maybe the guy still checks this newsgroup and will post info on the current status of the company, good luck!

Well, it's not in perfect shape and it was unfortunately modified, but
IMHO is is still a very valid collector's piece. Maybe it was dug out
of a dumpster. So what? If I knew of a dumpster in town with a
1400XL, I'd sure as hell grab it!

The sad thing is these carts will probably bring in $5-$10 each on ebay.. Talk about buying low and selling high! (I paid $5 for a 7800 Galaga cart the week before O'shea posted their carts!)

Hello Steve !

To be short, I'm interested in buying the following Atari 8-Bit carts:

Bounty Bob Strikes Back, Boulder Dash

How about $50 for both carts ?

Cheers from Germany,

Andre

4689. FS: My Atari Collection

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-27 00:00:00 UTC
From: Basenet <swolfe1@mail.gcnet.net>
Message-ID: <_Me33.111$2t.8938@typhoon2.gnilink.net>
Source record: 52105

Due to my dire need for a decent car to take me to and from college everyday
and the need for me to clear out my computer collection due to space
limitations, I must sell some of my atari equipment.

I have the following, all in excellent working and cosmetic order.
Everything that needs them has the power supplies.

800xl computer system
830 acoustic coupler-box and manuals-box is old, but still in good shape
1030 serial modem
1027 printer with extra ink roll still sealed
Telelink 1 cart with box and manuals-box is in good shape
1010 data recorder
An Invitation to Programming 2- tape- box and manuals- box in fair shape
1 sio cable
Atari XL user's handbook in good shape

I'll take any decent offers. For sale only. Buyer pays shipping via USPS
Priority with Delivery Confirmation and insuarance or UPS.

4690. Re: My Atari Collection

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-27 00:00:00 UTC
From: Basenet <swolfe1@mail.gcnet.net>
Message-ID: <3_e33.113$2t.9065@typhoon2.gnilink.net>
Source record: 52106

Correction: The 1030 is not a serial modem. It uses sio. The acoustic coupler is serial.

4691. APE and Prosystem '98 Beta Available

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-27 00:00:00 UTC
From: "Steven J. Tucker" <ai123@FreeNet.Carleton.CA>
Message-ID: <270519991023438675%ai123@FreeNet.Carleton.CA>
Source record: 52107
Cross-posted to: comp.sys.atari.announce,comp.sys.atari.8bit

Final beta test versions of Ape '98 and Prosystem '98 are now
available for registered users of APE. A few of the new features
in APE '98 vs. the dos version are:

Excellent stability under even the heaviest system loads, runs as a
real windows device driver in the background. No more sputtering
or timeouts when running programs.

Runs in the system tray and uses 0% of the CPU when idle, even on a
486 system. Does not use more than 3-4% of available CPU time even
when loading from the Atari at highest possible speed.

8 independany PC-MIRROR drives, as well as the complete big disk support
your used to in APE. Each independant PC-MIRROR drive can also act as
an independant APELOADER drive if your OS supports booting from drives
other than drive 1.

A file browser with built-in support for viewing the complete directory
tree of any Atari/Mydos or Spartados image, and extracting files.

Advanced printer support. Print from your Atari to any windows printer
driver, using truetype fonts, direct to the pc printer port, to a file,
or to a print monitor window.

Plus many other new features like the nice GUI and ease of use. Check it out
if you have Windows and are using APE.

The prosystem has been completely rewritten and includes batch support
of 1-4 drives for every operation. Need to image a bunch of disks? Just
hook four drives upto your Prosystem interface and press start. Need
to format a box of disks? how about formatting all 4 drives at once
to make things easier and faster?

To get your beta copy just e-mail me with your registration information
and I will send you the dpownload URL and password. Any information
regarding bugs or new features would be greatly appriciated.

Thanks

Steve

I actually tried this once. I should pull out my IBM tech ref, but I believe
it goes something like the 1st 3 or 6 sectors on an IBM disk are 256 bytes
each, then the thing switches over to 512 bytes per sector. Regardless...

I was thinking I could put boot code on the first 3 sectors of an IBM disk
such that you could have the Atari boot off an IBM created disks and do some
tricks from there, but as you noted, I seemed to have some trouble with the
Atari OS jumping to the code after it bailed out on the error.

If you feel like fooling with it, just EOR the data to invert it into Atari
format, then use debug to write it out to the disk.

It is really easy to pick the first 128 bytes of the 3 sectors off an IBM
disk. You don't even have to use SIOV, the standard $E453 DSKINV works fine
as will Omnimon.

For what it is worth. There is a public domain Action! run time package.

I would say 90% of the reason I liked the cart was the parser and editor.

But if you want to write pseudo Action! looking code, all you have to do is convert the RT back into (name your assembler of choice) format and understand how the language passes parameters.

The whole RT is only about 4k, so unless you are writing huge programs, you can just include it in any program you write.

The RT is all pretty well debugged subroutines. Format for passing parameters to them is just though the registers if you have less then 24 bits of parameters.

You would just be coding something like

JSR Graphics 2

vs

Graphics(2)

You lose a lot of nice features with looping, math, and logic operators, but it would still be a shortcut for most people.

(no quoter editor)
(Rick Cortese responds. Talks of putting A8 code in the
first three sectors of an IBM 360k 5.25" floppy and
booting an A8 with this IBM written disk, if I understand.)
I've done something like that. My 'pcutil' will write either
MyDOS or SpartaDOS boot sectors on a disk. 'pcutil' is what
I used to use to get stuff back and forth A8<->PC, before
I got APE and cable.
And it works fairly well, and is the only way to make a
A8 boot disk on a pc that I've heard of. If you're interested,
the 'pcutil' is on my page at http://www.en.com/users/russg.
Use at your own risk.
Russg

Original Mail Date: May 20, 1999 Time: 12:34 am
>Anyone know of more computer war(s) file coded on the little Atari ?!?

Andreas,

I coded one, ages ago, when I didn't know much about 6502 coding, so it was totally written in Turbo-Basic, with some MC-routines to display pictures and play CMC musix...
If I remember right, all data just fitted on one side of an Enhanced density disk, if no DOS, DUP, or Turbo-BASIC was saved on it. Not a very amazing demo, even at that time :-)
I think it was named "F#*K THE AMIGA" or something, and has a sample from "The 2-Live Crew" in it (Which was "F#*k the Omega" hacked to "AMIGA" :-))

Don't know if it runs on 64Kb Atari's. Could be it requires at least an 130XE...

Guess it's on the Pool-Disk. Let's have a look..... Hmm, maybe it was on the first edition ? Anyways, it doesn't run directly from the CD-Rom, since it required a write-un-protected disk :-)

In my download-area it's listed as FCKAMIGA.ARC I think...

Sysop Fox-1 (fox-1 AT aq DOT nl)

Gateway: THUNDERDOME, Atari 8-bit BBS. Running on ATARI 130XE, Pro-node 471

My goodness! You're right. I just checked the web page and Action is no longer
listed at B&C.

OK everybody! I have Action carts! How much do I hear? $100....$200...more?

OK, I'm kidding. So I have a few carts. But if anyone can help me turn a bank
switched cart into a file that I can use with Atari800win, I'd be glad to part
with some of my spares for, say, $30 each or so. Does that sound about right?

For faster service, Please direct all replies through E-Mail to Ben at: atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I find it hard to keep up with NewsGroups.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier for me if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Source record: 52117

Today I pulled my old Atari 130XE out of storage in my closet in hopes of hooking it up and loading up some old classics (ah, the good ol' days of 300 baud atascii BBS's and cassette drives... I sincerely miss those days!)

But when I power it on it goes directly to the Memory Test screen... the ROM tests fine with 2 big green dots, but when it does the RAM about 2/3rds of the dots are red. I assume that means that the RAM is bad?

Does anyone have any tips on reviving my XE? Or is it hopeless?

Please help!

Chad Hendrickson

Hey, everybody. I recently came across a near-mint Atari Communicator modem set-up, for use with the 400/800 series computers. Everything is in absolutely immaculate condition, including all of the foam packing and plastic bags, except for the box, itself, which has some dings and rub-marks on it. I'm looking for $125 shipped, but I will consider all reasonable offers and trades for PC Engine or PC-FX hardware. Thanks for your time!

Huh? Is the guy that started this thread an "atari dealer"? As far as I can tell, he's just some dude trying to make a buck on ebay. (not that I find anything WRONG with that, mind you!) No "support to the community" expressed or implied.

Now you bring something else up I didn't know.. O'Shea got the carts for FREE from Atari? Apparently they aren't scarce or valuable. I think $0.80 or whatever they're charging is fair. Don't you think they could've sold 'em at $1.00 or $1.50 or more? Anyone that sells at a price below what the market will bear sounds like a good supporter of the community to me!

Hey guys, I was wondering what's up with the Atari fido nets...

Atari
Atari_ST
ST_prog

I am trying to get some BBS's in Ft Worth and Dallas to start carrying
them. I say them as fairly active on Doc's place BBS when I telneted to
them, but when we tried to set them mup resently we have not not
received any messages... can someone please tell me if they know what
the current state of these message areas are?
Also.. all you sysops.. I would like to like to ask all of you to carry
these Atari fido nets on your BBS and ask what would it take to have
your BBS support it? I would just love to get us talking at the BBS
level!!

Thanks,

Doctor Clu

PS: If you know of any other net work areas on a BBS that we could
incorporate besides fido.. that have an Atari message area, I would love
to know about. I know that Atari used to have a network of Atari BBS's
out there.. anyway.. I would love to know more.

Message-ID: <3750BB2A.354BA3AF@worldnet.att.net>
Source record: 52038

I remember that one! As I recall it was called Commiekill. Indeed it exploited the weakness of each machine. BTW the 'mathematics test' was a large equation of log's exp and trigs is printed by the C64 for the Atari to calculate, a caption reading "this should take you awhile", that was in reference to the FP math package of Atari Basic (which was REAL slow).

Somewhere I've got a disk with that little gem, it was written in Atari basic and start to finish it runs about 2-3 minutes.

I bought somebody's Atari stuff on one of the newsgroups a year or so
ago, and found the Ultima I disk only in amongst the other things. I put
it up on ebay and ended up selling it for $75+shipping--I was stunned,
but sometimes you just get lucky.

There was not much to do to complete Wizard's Crown. Just e-mail me with your difficulty and I can help you out. BTW, Eternal Dagger was released for Atari 800. Does anyone in this group know of the sequel hinted to(if it exists) at end of Eternal Dagger?

Keith Scroggins wrote:

This is considered a classic due to the playability of this sucker. Only ten levels, but it is pretty hard to get past some of the levels without dying. My favorite level was #6 where you had that huge pool of radioactive waste just waiting for you to fall into.

It actually has more levels. 25 I think, Miner 2049'er had 10 levels.

And Bounty Bob's control in Miner 2049'er isn't as good as in Bounty Bob Strikes Back

Excellent games both of them though!

I think the 835 came in Communicator II. I have an original Communicator package and it has the 830 modem with the accoustic coupler and the 850 interface and the Telelink cart with no number (like WWI wasn't WWI until WWII came along).
If Dante has Communicator, it would be like mine.

Message-ID: <19990530001355.23704.00006431@ng-ci1.aol.com>
Source record: 52039

I have the following items:

1 - Atari 130XE Computer
(Bought from a hobbyist... has a switch on the back for several different operating systems... lost the manuals, so I have no clue as to what they are)
2 - 810 Disk Drives (one is sped up, I believe)
1 - 410 Cassette Player
1 - Serial/Parallel adapter (850?)
1 - Amdek Green-screen Composite Monitor
1 - Power Supplies
Miscellaneous Software... mostly games (on Disk/Cassette/Cartidge)
1 - Star Gemini 10X Dot-Matrix Printer
Joystick or two

I will accept any reasonable offers on this system, however, I am looking for a 7800 console or Sega Master System with games for outright trade RATHER than money. Buyer pays shipping, unless there is a trade, in which case I will pay shipping for the system. I also have a 2600 system w/games if you are interested... Please respond via. E-mail to:

MetalEJOS@aol.com

Hoy! I am looking for a good emu for a 130 XE. I would like to get one that supports the 6502 ML and Atari BASIC. I loved my old 130 XE and I am a diehard hacker. I just want to see if I can use my 450 K6-2 to overdrive my old progs.

And one more question: Is there any kind of prog that can compile/convert Atari BASIC and the 6502 instruction set to something my PC can understand without the use of a emu?

Thanks,
David Bowden

Omnimon Basics
Enter Omnimon:
SELECT/RESET
OPTION/SELECT/RESET (always use this
if entering from BASIC)
JSR $C001 or X=USR(49152)
Will enter Omnimon upon any encounter
with a BRK instruction.

Once in Omnimon:
PC NV-BDIZC AC X Y SP
Program counter, status registers,
Accumulator, X reg, Y reg, Stack
pointer.

Leave Omnimon, return to program:
Hold START, hit RETURN, use D to
set PC first.

Command Summary:
A: Alter Memory: A addr byte byte... -
Used to change 1 or more contiguous
bytes of memory.
B: Boot Disk B - Will boot off of the
selected drive.
C: CPU Registers: C - Used to
display and alter the registers.
D: Display Memory: D (start addr) (
End addr) - Used to view memory data.
To alter memory, position cursor and
type change.
E: Execute Memory: E (option/=steps)
- Will execute one or more
instructions at a time and display
intermediate results.
F: Fill Prgm Buffer: F addr - Teach
monitor a sequence of commands for
later execution with the 'O' command.
G: Get File: G (filespec) (addr) = A
full binary load function, single or
double density. Doubles as disk
directory command.
H: Hex Arithmetic: H= (= oper) (=
oper) ... - Hex conversion allowing
addition, subtraction, multiplication
```

```
and division.
J: Jump Subroutine: J (addr) - Go
execute subroutine.
L: Link Drive: L (drv=) - Select
drive = and linked or sequential
sector modes. All disk I/O will go to
the selected drive.
M: Move Memory: M addr0 addr1 addr2
= Move a block of memory from anywhere
in memory to anywhere else.
N: Relocate Memory: N addr0 addr1
addr2 (addr3) (addr4) = Adjust 6502
code that it will execute in another
location.
O: Operate Prgm Buffer: O addr =
Execute the commands stored earlier
with the 'F' Command.
P: Printer Control: P - Screen I/O
and be echoed to a printer.
R: Read Disk: R (sect=) (buff addr)
(=sects) = Read one or more sectors
from selected disk drive into a
specified buffer area. See W for eg.
S: Search Memory: S addr byte byte
... = Search memory for and print out
occurrences of a sequence of bytes.
T: Toggle Format : T = Toggle between
hex and character formats.
V: Verify Memory: V addr0 addr1
addr2 = Compare 2 blocks of memory and
print out the differences.
W: Write disk: W (sect=) (buff addr)
(=sects) - Write one or more sectors
to disk from a specified buffer
address. eg. W 1 A000 40 (writes 64
decimal sectors, dumping $A000 to
$BFFF to sectors 1 to 64)
X: Disassembler: X (addr0) (addr1) =
Translate machine code into assembly
language. Can be used to create a
source file.
Y: Assembler: Y addr instr -
Translate assbly lang. into machine
code one line at a time. Usefull for
patching programs.
**************
end
Until the docs are ocr'd, above is
a small help file I made for
Omnimon. Is for the XL/XE,
```

maybe same for 800.

Tell me about it..

That guy that just paid $1000 for the 800/ATR8000 combo also paid me just over $600.00 for a collection of Atari programming carts (Action, MAC65, BASICXE, BASICXL and an Rtime8.)

He's bidding on another set of carts and its up to $455.00 already!

I'm not complaining!

4737. Atari 8-Bit Collection needs new home in S.F. Bay Area!

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-30 00:00:00 UTC
From: ranger@hooked.net
Message-ID: <375175e6.1706040@news.wenet.net>
Source record: 52053

I've an assortment of Atari 8-bit stuff I must get rid of here in the San Francisco Bay Area. 2-1050 drives, 2-1200XLs (they work, but both have some dirty keyboard problems - some keys don't seem to work sometimes), a color monitor, 850 interface, tons of software (I use to help out with an 8-bit club software library), cables, power supplies, and other assorted goodies.

I will not ship - you'll have to pick it up (I'm located near the Golden Gate Bridge in San Francisco).

It's all or nothing, and it's gotta go real soon, like by next weekend hopefully! (I just moved and I don't have room to set it up or store it). I don't want much for it, I mainly just want to see that it doesn't become landfill.

Please email me if you are interested. If you want it, and can pick it up, we WILL come up with a fair price. If you'd like to discuss email me - or I'm in the "book".

A while back I posted a small help file on how to use the Omnimon along with the rom for use under Atari800win..

Well, just got hold of a scanner and am now OCRing the complete docs, started today and I'm 6 pages in (14 to go). Will have a txt only version and a word 6.0 / 95 version for those that want either.

At least you will be able to print them out now :)

Should have them done for tuesday, hopefully proof read :)

4742. 1400XL: get it on ebay

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-30 00:00:00 UTC
From: Dan Toms <dtoms@essd.sri.com>
Message-ID: <3751A44D.6191AFB7@essd.sri.com>
Source record: 52058

only 4 days left

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=109021565

Atari 1400Xl For Sale.

This is your chance to own a rare piece of Atari
vaporware. Its called vaporware because it never
was officially for sale.

This item is rarely seen for sale, because no one
wants to give them up. I don't either, but I
need the money :).

This model comes in a genuine 1400XL case,
it does not have a 1400XL name plate.

The internal 300K baud modem has not been tested
(I don't know what software to use with it)

The voice synthesizer works great.

The PBI interface is untested(again, nothing to test with)

Everything else works great.

A 256K memory upgrade has been applied to it, raising
the total ram to 320K. It is the piggy back method.
The wiring is clean and heat-shrink wrapped. The
buyer could easily desolder the connections, if desired.

This unit comes with a modified XT type of power supply.
The 1400XL power supplies used different voltages than
the other XL lines and I was unable ever to find one,
so I built this. It works, it is not pretty.

The motherboard has 1400 printed in the lower right corner.
The back of the motherboard reads:

C061742 REV X3
ATARI COPYRIGHT 1983

PICTURES:

These pictures are rather low quality, sorry.

The top of the case, 28K, is <a
href="www.ecst.csuchico.edu/~dtoms/atari/outside.jpg
"> here

A pic of the mainboard, 59K, is <a
href="www.ecst.csuchico.edu/~dtoms/atari/inside.jpg>
" here

The blue wires are from the ram upgrade. You can see 1400 on the
mb in the lower right corner.

EXTRAS:

I am also throwing in some interesting cartridges.

1. Answering Service Cartridge 12/83

This cartridge has a handwritten label. When booted it
prints:

1400 PHONE ANSWERING SERVICE

and then sits there.

I assume it was some type of phone answering service ;)
I'm not sure what else it is supposed to do. I can't
get it to do anything.

2. Answering Service Cartridge

This one has a type written label. It doesn't boot
at all.

3. EXERDI 0.0

810 Disk Board Compatibility Test
COPYRIGHT ATARI 1981 VERSION R00.00

Not sure what this does. I don't have a 810 anymore.

4. ATARI USER DIAGNOSTIC

This doesn't boot at all.

WHAT YOU GET:

You get the 1400XL, the power supply, the cartridges, the ram-upgrade
instructions, the power supply pinouts, and a synthetic cover(made for
1200XL)

I think I still have commiekill on disk somewhere. Sometime real soon I want to build an sio2pc or APE cable to transfer all of my stuff to the PC. I am just now learning to code the 6502 (assembly) so it would be cool to have my real 8-bit linked to the pc anyhow. I miss the good ol' days!!!!!!!!!!!!!

800? I want a 130 XE emulator so I can use the RAM drive, can this prog do
that?

Take a look at

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewBidItems&userid=xonx&completed=1&all=1&rows=25

and you will know.

Andre

Message-ID: <37578ac8.11272148@news.freeserve.net>
Source record: 52071

I have been busy getting the OMNIMONXL docs OCR'ed BUT I have lost 2 pages (17,18).

My docs were very grubby and I can't find those 2 pages, all the others are done and proof read. So I am sitting here with the file but need scans of those two pages to complete the set.

Anyone?..No mega scans please, my printer is only a 300ish dpi printer so scans above that are wasted (and big), just smallish scans that I don't mind correcting after the OCR would be great.

If no one can help then I am happy to send the file{s) to anyone to play with. Have read it all about 10 times and checked any numerics. The docs bar some formatting glitches are pretty good.

There are 2 versions, a txt only version and a Word 6/95 one with all the formatting (ish) intact.

4756. More Atari woes

Newsgroup: comp.sys.atari.8bit
Date: 1999-05-31 00:00:00 UTC
From: adrian@home.ta
Message-ID: <37548f8d.3237802@news.demon.co.uk>
Source record: 52072

I'm definitely not having much luck here :)
Yesterday I got an XE console and today I managed to find a
1040ST......the XE's basic seems to work but the 4 games I got with it
look like they're fooed unless I'm doing summat wrong (it boots to the
self-test menu).
And as for the ST, am I right in thinking I need a boot floppy for one
similar to the Amiga? It switches on and seems to be searching on the
floppy so I guess the answer's yes!

Any help appreciated

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

-> The Communicator that I have comes with the 830 modem, the 850
-> interface module, and the telelink 1 cartridge. I don't know
-> much about old Atari's ... I'm looking for $125 shipped ...

By the way, that's a 300 baud modem. 300 baud modems aren't
useable anywhere today. The 850 interface may be worth $20 to $30,
but everything else you listed is worthless.

Thanks to James and Bob the last two pages are here.

Been a busy bloke and got it all ready, hope you like, they were a pain
trust me...You should have seen my originals :)

Anyway, they are on my web page under the Atari link but my page uses
JAVA for the buttons soooooo I will also post it to the
alt.binaries.atari and alt.binaries.comp.atari8bit newsgroups and of
course you can just email me if neither of those options is any use.

Have fun....

your attitude is exactly why i chose not to release anything for the 2600/7800,to make a product,you cannot compete with this type of mindset,we have a 7800 program,and a half done 2600 game that we are sitting on because when price comes up,alls i here is o'shea,maybe when there stuff is gone,this mindset will be also,the bidding that i see going on,on ebay,i think reflects what this stuff will really be worth someday,remember baseball cards in its infancy?people used to think that the prices were outrageous in the beginning,o'shea is a anonomly,the tremeils still had one warehouse full of software from the warner atari days,and it had no where to go but the dumpsters,so they gave it to o'shea to sell,and split the profits,anyway jack went away,and the stuffs theres to keep,but can you find anybody else willing to do this?free is still hard to compete against,thanks,
lance
